THE ECONOMIST,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette, and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"If we make ourselves too little for the sphere of our duty—if, on the contrary, we do not stretch and expand our minds to the compass of their object—be well assured that everything about us will dwindle by degrees, until at length our concerns are shrunk to the dimensions of our minds. It is not a predilection to mean, sordid, home-bred cares that will avert the consequences of a false estimation of our interest, or prevent the shameful dilapidation into which a great empire must fall by mean reparation upon mighty ruins."—BURKE.

VOLUME XVIII.

BEING FROM JANUARY 7TH, 1860, TO DECEMBER 29TH, 1860, INCLUSIVE.

THE PROSPECTS OF THE MONEY MARKET IN THE NEW YEAR.

The beginning of a new year commonly inclines us to look forward in money matters as well as in others. It is, however, in general by no means easy to do so. The state of the money market is affected by so many disturbing agencies, and depends on such imperceptible causes, that no one who understands it will hazard a confident prediction respecting it. But although we cannot on such a subject hope to obtain absolutely certain conclusions, it may be useful to enumerate shortly the principal considerations which will probably influence the state of the money market during the present year, and to show what events are likely to take place in it, and what are not so.

The fluctuations in the value of money have been during the last four years very remarkable. In 1856 and 1857, its value was remarkably high; in 1858 and 1859, it was unusually low. In the two former years—in 1857 especially, the bill-brokers and joint stock banks were giving rates of interest for money much higher than any which they had ever offered before; during the last two years money has been, according to the cant phrase, "a drug" in the market, and it has sometimes been difficult to dispose of it satisfactorily on any terms. The explanation of this difference is not at first obvious. The foreign trade of the country has occupied, on the whole, quite as much of our capital in 1858 and 1859 as it did in the two previous years. The returns of the Board of Trade for the respective years show this, as we have frequently remarked, conclusively. The home trade of the country is still more remarkably prosperous. Probably so much sound and legitimate business has never been done in the domestic trade of the country as is being done now. We are employing on the whole as much of our capital, if not more, in the various branches of trade now, when money is cheap, as we were formerly when it was very dear.

The explanation of this is the contemporaneous augmentation of the means of the country. Year by year we make in this country a vast annual saving, the exact amount of which can never be accurately known, and the best estimates of which can only be regarded as vague, though sometimes instructive guesses. Year by year much, though we do not know how much, of this annual saving seeks an appropriate investment in the London money market; and begins to compete with the funds which were previously accumulated there. Unless, therefore, there is a new source of demand to counterbalance this new source of supply, the value of money must fall. Although we are doing now as much trade as when the value of capital,—measured by the rate of interest in Lombard street, was exceedingly high, it is quite natural that the value of capital, when estimated in the same way, should now be low. We have much more capital than we had then to meet nearly the same demand and do nearly the same work.

This is, we think, the consideration which should most weigh with us in trying to form an anticipation of the future. The desirable and natural course is, that year by year the inventive business-talent of the country should open new fields sufficient to employ its new capital. In every year the new investments that are suggested *ought* to absorb the new capital that is saved. And in general we believe that this will be the case. It is true that some economists have thought that there were in operation causes which would probably reduce the value of capital in this country, but practically looking at the general history of the money market during the present century, we see little sign of a progressive fall, and we think that the causes alluded to are at present, and are long likely to be, counteracted by others of a contrary tendency, and at least an equal power. On the whole, we do not doubt that the business talent and practical sagacity of the country will be found quite able to employ our new capital year by year in a proper manner; and the distributing machinery of banks and discount establishments is now so ample and is so ably directed, that the new savings of the country will, we believe, ultimately for the most part get into the hands of good men of business, though they are very often accumulated by persons who are wholly unable to form any correct judgment of business matters.

We have now, however, to deal with a somewhat different state of things from this natural and ordinary one. We have, so to say, *got behind*. Our investments have been for the last two years in arrear of our accumulations, and we have not only to deal now with the customary employment of our very last savings, but also with some part of the savings of former years which are still on our hands. What, then, is likely to be the amount of this unusual pressure upon us, and what are likely to be the new ways of employing money that will be open to us?

We have, as we have explained, no accurate account of the uninvested savings of the country. Their amount is one which we cannot hope to estimate: the *data* for so doing are not given to us. But we possess a sort of barometer which may in part indicate to us when they are great and when they are small, and which, when properly used, will tell us something of their fluctuations from time to time, though nothing of their absolute amount. We allude to the returns of the Bank of England. We may assume that when the Bank has a large accumulation of bullion, and overflowing banking resources, the savings of the country are to an unusual extent still uninvested, and that when the Bank has no superfluous means, the precise contrary is in all likelihood the case. What, then, are the facts? The most

important part of the Bank returns were last year and now respectively as follows :—

	Jan. 8, 1859.		Jan. 4, 1860.
	£		£
Notes in circulation	21,704,045		22,620,690
Public deposits	9,632,309		9,159,556
Other deposits	13,580,106		13,409,327
Public securities	10,805,931		10,923,782
Other securities	18,209,742		21,092,909
Bullion	19,145,649		16,460,824
Reserve	12,161,000		9,110,729

We see, therefore, that in the course of the year the reserve of notes in the banking department has diminished by three millions, and the bullion by 2,600,000*l*. The loans, likewise, have increased by three millions, while the deposits have not varied very materially. The Bank has, on the whole, employed a considerable sum more than it did last year in advances to the public, and we may reasonably infer from these facts that a rise in the rate of interest, though not immediately to be anticipated, is nevertheless perceptibly nearer than it was last year.

We see no reason, therefore, to believe that the past and uninvested savings of the country, which are now reducing the rate of interest, are very large, or likely to be very influential. As far as the best indications which we have go, they are not so.

What, then, it remains to ask, are the channels of employment likely to be open to us? Our domestic trade, we may consider, is likely to be, and now is, sound, good, and increasing; and this will be to a considerable extent a satisfactory source of investment. Nor can the domestic trade long increase alone. We import the principal raw products required for our principal branches of industry from foreign countries; and if we increase our domestic consumption of manufactured goods, we must buy the necessary materials more largely abroad. Shall we be able to do so? As far as respects the United States, which are, perhaps, the most important, their position is to a great extent similar to our own; they will be able to trade with us as much as they ever were; the value of capital there is below its ordinary rate just as it is here. On the Continent political disturbances will retard, it is probable, for a considerable period any very rapid development of trade. The vague and half-unaccounted for sense of insecurity which to some extent now prevails abroad, is of all states of mind the most unfavourable to trade. Definite danger may be removed, and definite fear may be dispelled; but what is indefinite shrinks from confutation in argument, and is only very gradually removable by an alteration of facts. Still, on the whole, the ordinary and natural development of industry may be expected to have some effect even on the Continent, and to be likely gradually to augment our trade with it. Moreover, the resources of India for productive purposes are only beginning to be made known, and if they can be properly used, will cause a great increase of our trade both of export and import. On the whole, there seems every reason to anticipate a considerable addition to our commerce during the present year. The foreign part of it has been for a considerable period substantially stationary, and may now fairly be expected to increase with more than ordinary rapidity.

On the whole, therefore, we are inclined to think that the unusual depression in the value of money which has marked the year 1858 and 1859, will not continue during the year 1860. We do not anticipate any immediate change, and minute temporary circumstances make money, as we write, a shade less valuable. But if we could venture to make a definite anticipation for the coming twelvemonth, it would be that the trade of this country, both foreign and domestic, would increase during the course of it, and that money would gradually and steadily rise in value, to some extent, in consequence.

THE LOOMING CONGRESS.

The *cacoëthes scribendi* has been fatal to many reputations, and is dangerous to all. Especially is it the besetting peril of public men. Ministers and Princes, above all men, should say little and write less. Even Job among his miseries, clothed in sackcloth, sitting in ashes, and scraping himself with broken potsherds, could wish no more certain shipwreck to his enemy than that he might commit the irreparable blunder of writing a book. Expression of every kind has its shoals and quicksands, its sunken islands and its coral reefs; but expression by the pen—the *litera scripta* which remains like the stain of blood—is of all bad habits at once the most seducing, the most formidable, and it would seem also the most incurable. Lord John Russell got into a sad scrape by the Durham letter. Lord Ellenborough gave us the measure of his wisdom by the Somnauth Proclamation. Sir Edward Bulwer Lytton floored himself by the Ionian Dispatch. But of all sinners and sufferers under this cruel malady, the Emperor of the French is perhaps the chief. For a great statesman and a great potentate he has at all times been too ready with his pen; for a silent and reserved man, too, he is at moments strangely ready with the tongue;—and his words, whether written or spoken, have a peculiar and characteristic ring about them which ensures at once recognition and remembrance. They cannot be forgotten, and are sure to be brought up against him. The opinions and criticisms of his "*Idées Napoléoniennes*" are cast in his teeth as mercilessly and as embarrassingly as Hansard is flung in the face of a ministerial senator by an opposition aspirant. His sparkling sentence, when defending himself before the House of Peers,—though we understand it is expunged from the authorised edition of his Works,—has stood sadly in the way of the cordial confidence of Englishmen. His letter to Edgar Ney must have been a thorn in his side during the whole period that the French occupation of Rome was doing the very opposite of what that letter urged and promised. Europe would have thought much less of his two great wars and his constant preparation for contingent hostilities, had it not been for his Bordeaux declaration, "*L'Empire c'est la paix.*" No one could have greatly blamed the unsatisfactory peace of Villafranca, had they not had his magniloquent proclamation at Milan wherewith to contrast its impotent and irreconcileable provisions. His letter to the King of Sardinia, stating what were the terms he intended to demand from the meditated Congress, dissatisfied England, disgusted and alarmed Italy, and lowered deplorably his reputation as a practical and qualified statesman. And now the Pamphlet which is the talk of all Europe—and which no one hesitates to ascribe to his dictation or at least to his command—while recovering the good-will of Italy and England, and restoring his reputation for capacity and sense, seems to have rendered at least problematic the meeting of that Congress which he so ardently desires. The Pope says he will not attend unless the spoliatory Pamphlet be disavowed. Naples, Spain, and other Catholic Powers, declare that they will join in no Congress in which the Pope is not represented. Russia, it is said, has protested against ideas such as those promulgated in the obnoxious *brochure* being received as bases for discussion; and Austria demands, but does not obtain, that France shall repudiate doctrines so inconsistent with the treaty of Villafranca, before she can take part in a general European Areopagus.

Now, much as we approved the general purport and arguments of the document in question, we can perfectly understand the unwillingness of the Pope and the other Legitimate Powers to become parties to a solemn conference of all the great European authorities to discuss projects and principles so startling, so liberal, and so beneficent;—especially with the probability that the preponderating influence of France, England, and Prussia conjoined would be exerted to procure their sanction. We scarcely expect that Louis Napoleon will disavow his programme; we sincerely hope that he will not; nor, if he did, do we imagine that much effect would be produced by the denial. Therefore—especially since the retirement of Count Walewski—we think it increasingly probable that the proposed Congress will never meet; and, as our readers are well aware, the disappointment will be no grievous one to us. We always looked upon England's participation in such an assembly with grave uneasiness, and with by no means sanguine hope. The Congress might have done much good; but it might also have involved us in serious embarrassments, in perilous engagements, and in questionable guarantees. If, indeed, we could have induced all the great Powers to embrace and to publish, as a maxim of the Public Law of Europe, the grand doctrine of non-intervention between Sovereigns and subjects, we should have achieved a grand and permanent benefit sufficient to have justified much labour and some risk. But if, as is more probable, we had merely been able to assist in securing the liberation and consolidation of Central Italy at the cost of

guaranteeing to the Pope the residue of his subjects and territory to all time and in spite of any misgovernment, it may well be doubted whether the gain would have warranted the price.

It is not easy to foresee what effect will be produced by the non-assembling of Congress on the evolution of the Italian problem. We apprehend, however, that it can scarcely be otherwise than favourable. It is pretty clear that the views of the Emperor of the French have undergone a change for the better since the peace of Villafranca and the ill-omened letter to Victor Emmanuel. It is more than probable that he has obtained, at all events, the *general* countenance of England for this favourable modification of his schemes. The Central Italians and the Romagnese have at least the advantage of the *status quo*,—and this is a great point. Parma, Tuscany, and Modena have been deserted by their Princes, and have formally abjured the fugitive dynasties. France has declared distinctly that she will not force them back upon an unwilling people, nor permit other Powers to do so. Romagna has not, indeed, been abandoned by the Pope himself, but the foreign legates, by whose means alone he had long governed it, fled, and can never again, we may be sure, be permitted to return;—and their flight was virtually equivalent to a Papal resignation. *De facto*, Romagna is as free, and was as completely deserted by its Ruler, as any one of the Duchies. It is scarcely possible that, in the face of the arguments and declarations of the Pamphlet, Louis Napoleon can use force to restore the Papal authority in this province; or that he can allow Austria to do so. It is certain that any such step would meet with the most earnest and solemn opposition from England. It is equally certain, we think, that the Pope cannot, by his own strength and his own troops, recover possession of his lost territory. This being the case, Central Italy, including the Legations, may be considered to be really safe and independent, and competent, therefore, to choose its own destiny and its own Ruler. Moreover, one of the special objections made a few weeks since by the Emperor of the French to their taking some bold and decisive step in this direction, is now removed;—he demurred to their acting for themselves at a moment when all the European Powers were about to assemble in solemn conclave to deliberate upon their future lot. But if that assembly be given up or indefinitely postponed, this objection has no longer any validity. We repeat it, these States are in fact free; they have no Sovereigns; it is decided that they shall have no unwelcome ones forced upon them; they cannot continue in a provisional state for ever:—what, then, remains but that they at once proceed to constitute their national existence and to fix upon a Ruler of their choice?

There are, however, two rocks ahead, in avoiding which they will need to exercise both caution and resolution. The Emperor of the French may be willing enough to guarantee to the Central Italian States security against the employment of foreign force to coerce them into the reception of their discarded Sovereigns, but not willing to recognise as promptly and unreservedly as England would do, either the right of their present chiefs and national assemblies to speak in the name of the people, or the right of the people themselves to insist on amalgamation with Piedmont. If the national assemblies had adopted a course more in accordance with his supposed secret aims, we apprehend that he would never have demurred to their authority or inquired too closely into their credentials. But as long as they persist—and we earnestly trust they will persist to the end—in demanding to form part of one single Central Italian State strong enough to hold its own against any ordinary adversary, it is much to be feared that he may require an appeal to universal suffrage, as the only mode which he will admit as genuine and valid of ascertaining the popular decision. He has, consistently enough, always declared that the votes of mere numbers are the ultimate and only just sanctions and bestowers of Imperial Power; and it is just possible that such an appeal as this, made under French auspices and conducted under Priestly influences, might be more favourable to the views of Louis Napoleon than to those of Count Cavour. It is possible also that, even if the result of such an appeal to the comparatively ignorant and uninterested masses were to result in an overwhelming demand of emancipation from Grand Ducal influence and of annexation to Piedmont, not only France but the other European Powers might demur to the recognition of such a proceeding, and might declare that so great a *European* change as the creation of a powerful State in Italy, of at least the *second* order of greatness, could not be consummated without their sanction.

Both these are probable and imminent dangers, especially the latter,—and it behoves the Central Italians to act both warily and firmly. At present their position is an excellent one; and perhaps patience and inaction will be their wisest course. For, virtually, their annexation as well as their liberation is a *fait accompli*, though neither recognised nor formally completed. They have all declared in favour of a junction with Piedmont, and are now all united under one Regent, recommended, and in fact appointed, by the King of Piedmont. Buoncompagni governs Parma, Modena, Tuscany, and Romagna, *technically* as their chosen ruler, but ostensibly and really as the nominee of Victor Emmanuel. To change this state of affairs either foreign intervention or internal discord will be necessary. Let the Italians keep clear of the latter, and be careful to give no pretext to the former.

The duty of England in this conjuncture is, we think, plain and beneficent. Let her at once *recognise* the *de facto* Government of the States of Central Italy, and, if possible, induce France to do the same;—and let her declare in the strongest and most public language that she will be no party to the exercise of any coercion, of *any sort whatever*, of the popular will in these provinces; and will oppose most resolutely all such foreign interferences. Let her avow also, as distinctly as she feels it, that in her judgment the mere purchased, intimidated, or cajoled votes of uninstructed masses can never, as an indication of national resolve, be put in competition with the deliberate decision of the middle and upper ranks, comprising all portions of the nation sufficiently educated to form a qualified judgment, and sufficiently independent of priestly influence and foreign intrigue to form an honest and courageous one.

THE PRESENT RULES OF MARITIME WARFARE.

We gave but very recently a careful exposition of the injurious mode in which the present laws of maritime warfare had operated on a late occasion to some extent, and were likely to operate in future to a much greater extent. We return to the subject, because, as yet, it is not, we think, apprehended in its true relations.

A notion has been expressed that the proposal to exempt from capture the mercantile ships of belligerent nations, and the merchandise of such nations on board such ships, is not a genuine suggestion for the benefit of the world at large, but a sinister proposal which emanates from a spirit of mercantile selfishness. Merchants and shipowners, it is said, wish to go to war without risk; they wish to do so by proxy; they wish to confine the operations of war by sea to vessels of war, simply that their cargoes may not be impeded, and their ships may not be captured. They wish, it is said, to enjoy the glory of our national exploits, but to suffer none of the inconveniences, to share in none of the sacrifices, by which all victories are obtained.

But, on principle, *why* should the mercantile classes or the shipowning classes suffer any inconvenience or make any sacrifice which the whole nation does not make? Home traders, brokers, and shopkeepers are not affected by a war, cases of invasion excepted, except by an increase in the taxes they pay. Why should the shipowner, why should the merchant who has goods on the seas, be treated differently in any respect?—why should either of them suffer more? Undoubtedly, if it is *necessary* that property at sea should be subject to a different rule from property on land,—if the adoption of that varying rule will make wars shorter, and peace more durable,—if the existing usages of maritime warfare are the best usages,—then let those suffer who must suffer. If it be necessary that the merchant or the shipowner be more injured by war than other classes, so let it be. But there is no *primâ facie* justice in it. So far as it is inevitable, it should be endured, but it must always be a hardship and an evil.

Nevertheless, as we showed in our former article, there is not now any occasion for discussing the old theoretical argument as to the best code of maritime warfare, on which so many jurists have written, and on which such discordant

views have been advanced. The question is now much narrowed, and can be discussed in a far easier and more business-like manner. We should despair of asking the attention of the approaching Congress to the subject, if it were not for the important conclusion that was come to at the last.

As we have before explained, the last Congress of Paris decided as between the States who were then and there represented, that neutral ships should in future make neutral goods—that is, that all cargoes not being capable of being used for military purposes should be imported into and exported from a belligerent country without liability of capture and free of question. In all former controversies on the subject, this was the principal point under discussion. England especially contended against it. We conceived that we had the command of the sea; we wished, not unnaturally and not improperly, to make use of that command; and we therefore contended that we had a right to confiscate the cargoes of our enemies on board neutral ships, as well as (in the converse case) the goods of neutrals on board ships that belonged to our enemies. We steadily maintained this doctrine for very many years. But when the Russian war occurred, we found that we could no longer act upon it, or contend for it. During the long peace the number of ships that did not belong to us had very largely increased; the mercantile navies of all the States in Europe, and of America still more, had been much augmented. We found in practice that we could no longer adhere to our former doctrines; we could no longer deal as we had formerly done with the ships and cargoes of neutrals; we were obliged to yield to necessity. The resolutions of the Congress of Paris only expressed in a formal manner the actual practice of the Russian war. They have, therefore, not only the moral weight which belongs to all obligations of treaty, but the inherent strength which belongs to conclusions that have been found on actual practice to be necessary. We cannot, if we would, rescind them; they are sure to be in existence during any future war, and are sure to be acted upon.

The specific alteration now suggested is to make an addition to these resolutions: it is proposed to put the ships of belligerents on the same footing as the ships of neutrals. Let us shortly consider this suggestion, first with reference to the world at large, and next with reference to the particular interests of England.

The obvious doctrine as to all regulations of war is, that no suffering and no inconvenience should be permitted by them which are not conducive to the legitimate end of war, the speedy attainment of a satisfactory peace. All ineffective pain is so much pure evil. The existing regulation as to ships belonging to the belligerents is, we think, clearly condemned by this principle. Why should the ships of a nation at war be subject to capture at sea? Will it tend to make the whole nation presumably willing to make a peace? Not in the least. Shipowners are in every country a small class of capitalists. The nation at large will bear their evils very easily, and will not make peace a day the sooner for them. Under the principle for which England formerly contended, the result was different. So long as you were permitted to destroy the whole commerce of a country—so long as you could intercept its whole imports, and shut in its whole exports—so long as you could ruin its whole external commerce—so long as you could injure large classes of producers in it, and straiten still larger classes of consumers,—you had an effective instrument for ensuring a speedy peace. You caused much suffering it is true, but you had an object in so doing. If your war was a just war, you might thereby obtain a just peace. On the other hand, the present remnant of the restrictive system is so much uncompensated evil. You will ruin the shipowners of the nation, but you will not thereby conquer it. It is as if in a war on land you exposed to peculiar rapine the property of the tanners or the grocers. To the general interests of the civilised world, we may be sure that the suggested alteration will be beneficial.

How is it with the interests of England? This is comparatively an inferior topic. If the alteration of a certain usage is shown to be for the general interest of the civilised world, it would be national selfishness to oppose such alteration. We should incur a just odium in all countries, if we opposed what is for their benefit, simply because it was not for ours. But how do the facts stand? Would England be injured by the abrogation of the existing rule?

We have shown that, on the contrary, only a few months since, England was inconvenienced by the existing rule. American ships were then preferred to ours for the most valuable cargoes, wherever they could be found. The United States, from their distant position and fixed policy, were sure to be neutral in the contest between Austria and France. *We*, from our nearer neighbourhood and different principles, might not be neutral. As the existing rules give a very great advantage to the ships of neutrals over those of belligerents, those of America were naturally and inevitably preferred to ours. Now that the Navigation Laws are repealed, it is quite possible that English ships might be practically excluded from the trade between Calcutta and London—that they would not be chartered to bring an ounce of gold from Melbourne. A long period of European confusion would, with the present rules of maritime warfare, and under our present laws, be sure to effect this.

Again, suppose that England was not only thought likely to become a belligerent, but did in fact go to war, would she then gain or lose by the suggested alteration? It is clear that the nation which suffers most from the present rules will be the nation which has the most ships, the most valuable cargoes on board these ships, the greatest number of both in the most out of the way and unprotected places. The nation that suffers least will be that which has the fewest of all these. Surely it is not needful to say which of the two England is. We can hardly anticipate that we should be ever at war with any nation which has ships so valuable, or so many costly cargoes on board these ships, or commerce so diffused and ramified. There is, at least at present, no such nation. We may fear that England will be conceived to have a prejudice and selfish interest in the modification of the present rules, but we cannot suggest even a plausible argument to prove that she is interested in maintaining them.

It should be understood distinctly what the present proposal really is. We do not suggest that the rules of blockade should be altered, or the regulations as to goods which are contraband of war. These must stand on their own merits, or be condemned by their own defects; they have nothing to do with the point under discussion. We only propose that the mercantile ships of belligerents should be put on the same footing as the corresponding ships of neutrals; and to this distinct proposal we have not as yet seen a distinct objection.

CATHOLIC CLAIMS AND ITALIAN RIGHTS.

Religious controversies are as a rule most studiously avoided by sober politicians and sensible journalists. To enter into them is commonly to involve oneself in a whirlwind of rage and abuse, out of which no good can come, and to be involved in irritation, misrepresentation, and annoyance incalculable, only to reap at last the gratifying conclusion that no result has been or could possibly have been achieved. Only when such subjects are brought inevitably into the political field; when religious disputes become questions of political significance; when the theologians of one school or another endeavour to force their views as a rule of political action upon the country, is it needful or desirable that statesmen or newspapers should take notice of topics which at ordinary times lie wholly apart from their proper sphere. And when such occasion occurs, it is well that the unpleasant task should be assumed boldly and decidedly; that no compromise or vacillation should be allowed to seem possible; and that the course which is politically right and wise should be asserted and defended in distinct defiance of the dogmas of those who denounce it as theologically wrong. It becomes those who are here on their own ground sternly and fearlessly to rebuke the passions of those who have brought their feuds and quarrels to be fought out on neutral territory; and while avoiding all irritating treatment, all unnecessary offence to those whose feelings are already in a state of extravagant soreness, to indicate

unshrinkingly a determination to act without them, and if need be against them.

Now the Irish—and we are sorry to add the English—Catholics have at present forced the Liberal press into this attitude of rebuke and resistance by the course which they have, as Catholic Christians and British subjects, seen fit to pursue: a course respectful it may be to the head of their religion, but most insolent towards their fellow-countrymen and disloyal towards their Sovereign. They have met together in large numbers to reprobate the policy adopted, or supposed to be adopted by the Government of this country in regard to the territories nominally belonging to the Pope as a temporal Prince; they have manifested in the most flagrant manner a preference of their spiritual allegiance to the Church over their temporal allegiance to the Crown even in respect to things secular; and have justified to no small extent the warnings of those ardent Protestants who resisted to the last the emancipation of men whose religion was said to be incompatible with good citizenship and undivided loyalty. Their fathers resented that assertion as an insult and an injustice; the sons are busy now in proving, so far as in them lies, its literal truth. The wildest of their orators hint at their inclination to support with money, and if need be with arms, a Prince to whom they affirm their country to be hostile; the most moderate among those who have addressed them do not pretend to disguise the fact that their good wishes are with their co-religionists, as against those who are entitled to, and certainly possess, the full and cordial sympathy of Constitutional England.

If there were the slightest pretence for the assertion that the part played by England in recent diplomatic intercourse has been that of a Protestant Power, hostile as such to the temporal sovereignty of the Pope, the wrath of English Catholics would be justifiable, though their manifestation of it must, even in that case, be considered unseemly. But no man of impartial judgment can really believe such a charge. The first move in that direction—the first symptom of an anti-Catholic policy on the part of Great Britain—would at once neutralise her diplomatic influence. As the representative of Protestantism she could have no right to be heard in the settlement of the issue between the Pope and his revolted subjects, still nominally Catholic. Nor, as the representative of Protestantism, would it be her interest to interfere vigorously on behalf of the Romagna. Nothing could injure Catholicism more than the spectacle of the restoration of that territory to the Pope; preceded by the siege and sack of half-a-dozen cities, by as many bloody fights, and by some hundreds of military executions. The reconquest of the Romagna means the repetition of the horrors of Perugia in every important town in that territory; and its reoccupation by the Pope implies the constant maintenance of a foreign army, with weekly flogging and hanging in the name of the Vicar of Christ. What could do more serious mischief to the religion of which he is the head than such a standing scandal? or what could Protestantism, unless utterly bewildered by the clamour of Exeter Hall, desire more than the restoration of a system which perpetually exhibited the hostile Church with the gallows and the bayonet as supporters? It is not as the first of Protestant, but as the greatest of Constitutional Powers that England, vindicating the law of nations and claiming for others the freedom which her good sword won for herself, defends the right of a people to cashier a ruler who has been found utterly and intolerably bad, whether that ruler be a King "by right divine," or a Church with pretensions higher still. And consequently she, whose voice would be silenced by the unanimous feeling of Catholic Europe if she spoke on behalf of an antagonistic faith, is heard with reluctant respect by the most absolute of despots when she protests on behalf of national rights. She resists the reconquest of the Romagna for the Pope on the same ground, and for the same reasons, that she would resist the forcible restoration of Tuscany, Parma, and Modena to their former Sovereigns. And those who clamour against this policy, and angrily maintain the right of the Pope to his lost dominions, are reasonably regarded by their countrymen, not as steadfast votaries of a defeated Church, but as recreant Englishmen, eager to wrest from others the liberties which England but a generation since restored to themselves.

It is, perhaps, natural that the Catholics should not, in their present state of passionate excitement, fully comprehend this. It is reasonable that they should be irritated by the silly and ribald insult with which a certain portion of the press and of the pulpits of this country incessantly assails their religion and its head. But it is strange that they should be blind to the utter impossibility of the adoption—for whatever motive—of any other course than that of which they avowedly complain. Their protest is not against any aggressive designs on the Pope's remaining dominions, but against any interference with the purposes of those who would reconquer for him what he has lost by the hatred of his own subjects. Now, it is clear that no Constitutional Government can, without stultifying itself as such, deny the right of the Romagnese to shake off a yoke which they felt to be intolerable, or refuse to defend that right when invited to take part in negotiations in which it is called in question. Thus much the Catholics of London and of Ireland ought to have understood; while against any possible aggressiveness of Lord John Russell's Protestantism they might rely in safety on the jealousy of the Catholic Powers, and the hatred of political religion which is strong among the higher classes in England itself. An English statesman who should sacrifice a diplomatic advantage for the gratification of theological animosity, would find the support of religious faction feeble against the condemnation of enlightened opinion; and Catholics may rest assured that the representatives of England will regard the Pope, not as Pontiff, but as Prince, and will deal with him exactly as with Leopold of Tuscany or Francis of Modena.

We are afraid that this would not satisfy them. Their speakers mix up the temporal and spiritual claims of the Pope, and assert for him a divine and indefeasible right to his dominions in virtue of that supernatural character of which diplomacy can take no cognisance. That the infallible Head of the Church is amenable to no human jurisdiction or control, is a dogma of religion with which we have no concern. But that any Sovereign whatever, lay or clerical, is exempt from responsibility for his temporal rule, and entitled to deal with his subjects at his pleasure, while they have no right but that of unlimited obedience, is a doctrine which no English politician or writer can admit. The parallel to this pretension on the Catholic side would be a crusade by Exeter Hall against the Government of Rome, on the ground that the Pope's spiritual claims were impious and unfounded. No sacredness of spiritual character can affect the purely political question of his right to a temporal sovereignty which he has long and intolerably abused.

But it is alleged by English Ultramontanists that the Papal rule has been foully slandered in this country, and that Englishmen, without any inquiry, have unjustly assumed the incurable badness of one of the best and mildest of existing Governments. Passing over the fact that the most powerful work on the abuses of the Papal domination was written in Catholic France, and waiving all conclusions that might be drawn from M. About, or from the devoutly Catholic Farini, it would be sufficient evidence of the character of that rule to cite the Mortara case, and the ten-years' occupation of the Romagna by Austrian troops. It is strange, indeed, if that be a good Government which can only obtain obedience by foreign bayonets, and preserves order only by martial law administered by foreign Generals. But, in truth, we have no right to sit in judgment on the merits of the Papal Government other than France or Austria might have claimed to judge the quarrel of our forefathers with James II. Its subjects have declared, as Englishmen declared in 1688, that the yoke is too grievous to be borne; and it is their right, as it was ours, to refuse to bear it any longer. Foreign Powers have no right to force a hated ruler on a reluctant people, however desirable they may deem the maintenance of his authority; and England cannot forego the assertion of this fundamental principle of international equity in deference to the religious prejudices of a most respectable class of her subjects.

THE REVENUE RETURNS.

The Revenue returns of the last quarter are very satisfactory in their character, as we anticipated that they would be. The condition of the country is very good, and its trade remarkably sound, and it was inevitable that this should

produce its constant effects on our national revenue. The following table shows that they have done so:—

YEAR ENDED DECEMBER 31, 1859.

	Increase.	Decrease.
	£	£
Customs	732,579	...
Excise	1,075,000	...
Stamps	...	19,362
Taxes	72,967	...
Property Tax	...	1,514,082
Post-office	150,000	...
Crown Lands	4,639	...
Miscellaneous	...	718,267
Total	2,035,185	2,251,711
Net Decrease	£216,526	

It is true that the whole account shows that our revenue has diminished; but then our taxation has diminished also. We relinquished an important part of the property tax, and, in consequence, our aggregate revenue is less than it was. Our indirect taxes in the two great heads of Customs and Excise have yielded 1,800,000*l* more than last year, and this cannot but be regarded as a most satisfactory proof that our people are constantly employed, reasonably remunerated, and able to expend more than they formerly were on the comforts they most wish for.

THE REVENUE.

I.—An Abstract of the Gross Produce of the Revenue of the United Kingdom, in the undermentioned periods, ended December 31, 1859, compared with the corresponding periods of the preceding year.

Agriculture.

AGRICULTURAL CUSTOMS AND COVENANTS.

LANDLORD AND TENANT.

It is impossible to overrate the importance to English husbandry of establishing some better understanding and improved practice in relation to the subjects above indicated than at present exist. Every one who brings these topics under discussion and consideration is entitled to the thanks of the agricultural community. At present so much confusion arises between old prejudices and modern enterprise, and between the want of free action on the part of tenants and the fears landlords entertain of leaving their tenants without sufficient restrictions, that in practice there is no little difficulty in settling a really sound and equal contract for the occupation of a farm. The Royal Agricultural Society never touches the question, and from the composition of the Council such abstinence need create no surprise. Indeed, landlords and tenants differ too much on the subject to render it probable that a society in which the landlord element so largely prevails can be induced to deal with it in a satisfactory way. Local societies have in different parts of the country discussed agricultural contracts with some advantage, and we have now before us the Report of a Special Committee of the Bath and West of England Society on "Agricultural Customs and Covenants," which, in many respects, is worthy of attention. Appended to the report is "a draft-report" prepsred by Mr T. D. Acland, on which, however, the committee expressed no opinion. Nor is that surprising, for it offers an illustration of that confusion of views, and that partial adherence to old notions, with the desire to promote a better system, which we have noted as so common.

In an introduction by Mr Acland, he tells us that Mr Charles Gordon, a member of the Council, moved "for the appointment of a committee of twenty-four members, of whom one-third were owners or representatives of landed property, one-third tenant-farmers, and one-third lawyers or professional agents." Of these, twenty-two are stated to have taken an active part in the deliberations of the committee, and the proceedings were continued from November, 1857, to February, 1859, when the report was received by the Council of the Society. Mr Acland believes that it will contribute "towards the solution of some of the difficult questions involved in the relation between landlord and tenant," which "has long been complicated by extreme views disclosed in some quarters; by undue alarms consequently felt in other quarters; and perhaps the adjustment of the conflicting claims set up on either side was

in some degree retarded by premature attempts at legislation." The point, which seems to have mainly been considered by the committee, and which is obviously uppermost in Mr Acland's mind, is how far the interests of the proprietor can be protected against the tenant without excessively restricting his freedom on the one hand, and without enabling him to make excessive demands against the landlord for improvements on the other.

The question, however, is regarded almost exclusively from the landlords' point of view, and with reference to landowners' objections to part with the control of their land for periods of any considerable duration. Thus, Mr Acland refers with some exultation, and "as at least one point gained, when a body of tenant-farmers clearly enunciate such principles as the following, *i. e.* "That damage done to a farm from foulness or bad management ought to be a charge against the outgoing tenant," and "that the obligation of a tenant ought to be indispensable in all cases, and *without reference to the state of the farm at the commencement of the tenancy*." Now the first seems a self-obvious proposition, and is in truth the actual law on the subject. But that such obligation is to be enforced without reference to the state of the farm at the commencement of the tenancy, is subject to very different considerations. The ordinary state of things where farms are let on yearly tenancies is, that the tenants enter on their farms in bad condition, and that either from want of sufficient capital, or from the absence of security for its recovery, they never bring the land thoroughly into a state of clean and good cultivation. How, then, can it be consistent with common justice to charge any such tenant, when outgoing, with the difference of value between a really clean and well-cultivated farm, and the farm in its actual state, for that is what is meant by "damage done to a farm from foulness or bad management." It is not in truth damaged at all; it is simply that the good condition of which the land under good management is capable, is absent. It is absolutely certain that with yearly tenancies the standard of culture, and consequently the condition in which farms are left by outgoing tenants, must be a comparatively low one. To meet this difficulty, many landowners and farmers have recommended what are called tenant-rights or stipulations that outgoing tenants shall receive compensation for unexhausted improvements. And it is some such arrangement that Mr Acland and the committee of the West of England Society have chiefly had in view. Thus, in his introduction, Mr Acland says:—"That the progress of agriculture is hindered by the want of security to the tenant, there can be no reasonable doubt. But until landlords are satisfied that this security is not one-sided, they will look with suspicion at all schemes of compensation to outgoing tenants. The notable case in which a great landlord was called upon to pay the difference between the valuations of a farm taken at the beginning and at the end of the tenancy is not yet forgotten; and all schemes, proceeding on assumptions tending in the like direction, are looked upon as tantamount to proposals for paying off the landlord on a fixed rent-charge, thereby taking away all interest in the possession or improvement of estates."

Now, what is this but an admission that if the landlord shall agree to pay to a tenant for all improvements made upon a farm, and the tenant shall hold it for some years, and carry out a system of improved husbandry, the amount to be paid to such a tenant when outgoing would be much nearer the value of the farm itself than landlords would like to pay. And we believe that would often happen. Nor would such a state of things be altogether fair towards the landlord. Most acts of good husbandry and improvement, which the tenant executed with a view to his own profit, and which, if he has held the farm for a considerable time, may be reasonably assumed to have afforded him a fair profit, will have incidentally made the farm more valuable than it was at the commencement of the tenancy; and this increased value the proprietor may reasonably regard as his own. The value Mr Acland attributes to the labours of the committee "consists in the strength they give to the recommendations in favour of tenants, by the entire repudiation of all such unreasonable schemes, by defining the proper province of the valuer, and by tracing out the narrowest possible limits for the sphere of litigation." We will now turn to the resolutions and report made by the Committee to the Council of the Society.

They say that the "terms of arrangement between landlord and tenant should be reduced to writing and signed before the entry of the tenant on the land." Of the propriety of this there can be no doubt, and such in practice is the case where any written agreement is adopted. But it commonly happens that the agent presents to the tenant an agreement which he must adopt altogether or not take the farm, and the majority of tenants enter into such agreements far too lightly.

The 2nd resolution declares that "the basis of such arrangements should be one of mutual security to landlord and tenant:—(A) *In favour of tenant.* Security that if he farms the estate up to the expiration of the tenantry, *as if he were going to continue the occupation*, he shall not be called upon to leave capital beneficial to his successor, from which he has not had time to obtain a fair return himself, without being paid for it. (B) *In favour of the landlord.* Security that, on the other hand, any permanent or temporary damage done to the farm by foulness or bad management will be a charge against the outgoing tenant." Now, can any thing be more vague than the resolution in favour of the tenant? How is it possible to ascertain "the capital beneficial to his successor, from which he has not had time to obtain a fair return himself"? Can a wider field for error, fraud or mistake, and litigation be conceived? But then it is assumed that this vagueness may be corrected by prearranged definitions, towards which, as we understand it, the rest of the resolutions point. The 3rd resolution, "That cultivation clauses should not *needlessly* restrict the tenant as to the succession of his crops," only requires the omission of the word "needlessly," which reduces the whole to a nullity, to be unobjectionable. The 4th, "That such restrictive clauses *as may be necessary* should, as far as practicable, carry definite penalties, by way of additional rent, so as to be capable of enforcement without the necessity of resorting to legal proceedings to assess damages," is a stipulation wholly in favour of the landlord. A tenant will be unwise to permit such stipulations, save where any act of importance, such as the breaking up old pasture land, is to be entirely prohibited. To consent to penal rents for the enforcement of cultivation regulations is absolute insanity on the part of the tenant. The 5th resolution, "That no claim for compensation on the ground of having made a farm clean be entertained," is well enough, for where an incoming tenant finds the farm he is about to take is full of weeds, he should require an abatement of rent for the first three or four years. The 6th resolution, "That ordinary claims on the part of the outgoing tenant be limited to crops in the ground and acts of husbandry, to be estimated according to their value to the incoming tenant," is a provision which reduces the allowance to an outgoing tenant according to the usage of most districts. And the 7th resolution, which recommends "that in making arrangements between the landlord and tenant, the usual 'custom of the country' be specially barred," shows that in the opinion of the committee no allowances for manures or dressings, save such as are especially stipulated for in the agreement, ought to be allowed. There is no doubt that in some districts, as in Sussex, Kent, and Surrey, the customary valuations have grown into serious and detrimental burdens on the land, and alike impair the value of land and impede good husbandry, but in other counties the "custom of the country" valuations are not unreasonable. It is, however, a good rule to require an incoming tenant to pay as little as possible for valuations which not seldom fail to give him real value for his hard cash; and where a farmer on entering pays only for crops in the ground and acts of husbandry according to their value to him, he may very well assent to quit on the same terms. But then, according to the view of Mr Acland and the West of England committee, this case has to be provided for. A yearly tenant manures his land yearly with purchased manure, or with manure enriched by the use of large quantities of artificial food given to his stock, and being liable to be turned out of his farm at short notice, it is clear he may "leave capital beneficial to his successor, from which he has not had time to obtain a fair return himself." They propose to meet that case by the 8th resolution: "That claims for compensation for purchased manure or special food be matter of special agreement, under which compensation is not to be claimed without previous definite notice given and consent obtained from the landlord or his agent." This practically debars a tenant from all claim for manure applied to his land. To obtain the landlord's previous consent to the purchase of so many loads of town manure, or tons of guano, superphosphate, or the like, or to the consumption of so many tons of oilcake or quarters of meal, is simply to reduce the tenant-farmer to a kind of serf, and practically a man of capital and independence would not do so. The omission would involve the loss of his right to compensation for manure used when turned out of his farm. We doubt, therefore, whether yearly tenants should consent to exclude the customary allowances without some substitute much less precarious than allowances for manures, &c., used with the landlord's consent.

A better plan than that proposed by the 8th resolution, is that adopted on some estates in Lincolnshire and other counties, where the landlord agrees to allow a certain proportion of the cost of purchased food or manures which are specified, at defined rates. But, in truth, most landlords are rather afraid to make such agreements, for the sums so expended by enterprising tenants who farm on a large scale are generally so considerable, that the owners of the farms are unwilling to enter into obligations of such magnitude. We do not see that the resolutions of the Bath and West of England Society afford any solution of existing difficulties in the relation of landlord and tenant; on the contrary, they give the apparent sanction of some tenant-farmers to resolutions which resolve—so far as they resolve anything—all difficult questions in favour of the landlord. This will not do. An examination of the report, however, shows that all attempts to reconcile such farming as the exigencies of the times demand with yearly tenancies is simply impossible. All the resolution which are of any practical value point to leases as the true solution of all "the difficult questions involved in the relation between landlord and tenant." Let a farm be taken on lease for twenty-one years or longer, the landlord taking care of course to secure a tenant possessed of competent capital, and then all questions as to restrictions on cropping and the like may be confined to the last two or three years of the term, and may be of the most simple description. No allowance for manures or purchased food would

be necessary; and stipulations for permanent improvements, and the maintenance of buildings, roads, fences, and the like, would form the chief subjects of arrangement, about which there would seldom be any difficulty. We say advisedly that, in the actual state of English husbandry, there can be no effectual substitute for a lease, if agriculture is to advance, and contracts between landlords and tenants are to be fair and equal contracts.

Literature.

THE WEST INDIES AND THE SPANISH MAIN. By ANTHONY TROLLOPE.

THIS book is unworthy alike of the author and of the subject. The author has a high and well-earned reputation as a writer of fiction, which he should have been slow to put to hazard by so flimsy and slipshod a performance. It is impossible in these slovenly and empty pages to trace or to recognise either the admirable delineator of character, or the consummate master of style, who delighted us in "Barchester Towers" and "The Three Clerks." Their verbosity is astounding; their repetitions are incessant. It would seem as if Mr Trollope had promised to write a book about his journey, but found that he had really nothing to say; and forgot that there are some promises which are more honoured in the breach than the observance. It would seem also as if he had contracted with the publishers to furnish a certain number of octavo pages, and being unable to fulfil his contract in spirit, descended to do so in the letter, and make words serve when matter and ideas fell short. Little is really told us—but that little is told as often as possible, and in as many words as possible. A more wearying or disappointing volume from a really able man we verily think we have never groaned over.

The subject, too—even Mr Trollope's side of it—deserved something better. That side is not ours: nevertheless we should like to have seen it more ably and more fully set forth. When we take up a book about our much-suffering and much-discussed West Indian colonies, we hope to read something worthier than the stereotyped traveller's jokes and complaints about fare and lodgings, and something fresher than the old lamentations of the ruined planters. When we take up a book about Central America and the Spanish Main, we hope to learn something new and authentic about the real condition and prospects of those deplorable fragments and debris of the old Spanish Empire founded by Cortez and Pizarro. Mr Trollope was under no necessity to write about those splendid and unhappy lands, whose present is so sad and whose future is dark and so perplexing; but, having undertaken to write, he was at least bound not to fob off purchasers and readers with criticisms of hotels and bills of fare, with dialogues with coloured Calypsos, with tedious ascents of mountains, with wet clothes, dark rides, and ill-defined impressions of the characters and positions of the different races—about which, though much is said, little real or distinct information is conveyed.

The book is yet to be written—and it would secure a large sale if written well—which should give us a clear and perfectly faithful and unexaggerated view of the planters' wrongs and real difficulties, and a correct and reliable picture of the present actual and comparative condition, moral and physical, of the emancipated negroes. Mr Trollope evidently considers the planters to have been hardly and unjustly dealt with by the authorities at home; but he does not even pretend to have mastered the subject, or examined cautiously the truth of their complaints. He tells us that the negroes are relapsing fast into sloth and barbarism, if not already hopelessly sunk therein;—but he gives us few facts, and has evidently gathered his impressions chiefly at second hand. He does not tell us whether religion or morals are making any progress among them; he does not appear to have questioned either missionaries or established clergymen, or colonial civil authorities, on these matters. He does not tell us whether the marriage tie is more respected than it used to be; whether the negro population is increasing; whether they are laying by money, purchasing property, improving their dwellings, or otherwise amending their position. He merely describes them, in a declamatory Carlylese fashion, which inspires no confidence, as living idly upon yams and plantains,—working only fitfully and when they please, and in some islands scarcely working at all. He does not tell us what are the habits of the Coolie immigrants, and what has been the result of this immigration on the moral and physical condition of the native population. In fact, he looked only at the surface, and heard only the tone of ordinary conversation; he records the impressions he gathered from what caught his eye and what struck his ear. He finds Barbadoes conceited and prosperous, British Guiana contented and confident, Jamaica wretched and lachrymose; and he comes home satisfied that the negroes are a nearly hopeless race, and that self-government in these islands is a mischievous and laughable farce. Now, there may be much truth in all these impressions: what we complain of is, that they are so stated as to give us no confidence in them, and to convey no conviction that Mr Trollope exercised any discrimination, judgment, or diligent investigation before adopting them. Probably the moral is that novelists ought not to write books of travels;—for there is a marked resemblance between the faults of this book of Mr Trollope's, and those of Mr Dickens' work on America which appeared some years ago,—though in style and spirit the latter was far the smarter of the two. As a novelist, Mr Trollope has not yet fallen so flat as his contemporary: as a traveller, he has sunk far lower.

As we have said, we should greatly value a competent book on the West Indies which should really give us the views of sober and qualified planters as to their own prospects and condition, and those of the negroes and the coloured race. We incline to believe that they may have something to complain of as well as much to deplore. But unhappily their advocates scarcely ever state their just grievances without such exaggerations and misstatements as put them wholly out of court, and rarely attribute their sufferings to the true cause, or call for the fitting remedy,—or admit that the course of legislation pursued by the mother country in regard to both emancipation and free trade was simply inevitable, and on the whole righteous and beneficial, even though the source of perplexity and loss to themselves. What ruined them was not so much interference from home, as their general habit of managing estates by agents, or as "gentlemen farmers,"—against the wastefulness and ineffectiveness of which system, no property, however valuable, can in the end make head. What was so fatal in emancipation was not so much the liberation of the negroes in itself, as the mode in which it was done and the measures by which it was followed,—for which the planters have mainly to thank their own long years of obstinate recalcitration against any preparative contrivances. What struck them so hard in our commercial legislation was not the free trade tariff of 1842 and 1846, which let in the *slave* sugar of Cuba to compete with them, nearly so much as the equalisation of the duties some years before which let in the *free* sugar of the East Indies—a measure which it was difficult, if not impossible for even themselves to argue against or to resist. Want of economy, want of capital, want of labour:—these are the real causes of the ruin of Jamica, and of other islands which have suffered in the same fashion:—for the two first of these the planters have to thank themselves and their forefathers exclusively:—the blame of the third must be shared between the Anti-Slavery party in England and the Legislature which they persuaded to abolish the apprenticeship system and to throw for a long time very unwise and unwarrantable impediments in way of well-considered schemes of immigration,—and the planters who could not accommodate themselves to the new system, or stoop to *persuade* and to purchase that labour which they had been accustomed to be able to *compel*.

THE NATIONAL REVIEW. January. Chapman and Hall.

THE most attractive and brilliant article, in the present number of this able review, is unquestionably the first—bearing the somewhat aggressive title of "Mr Kingsley's Literary Errors and Excesses." This paper is not intended as a complete estimate of Mr Kingsley's merits and demerits—but rather as an expostulation addressed to one whose high claims to admiration have been already cordially admitted in the pages of the Review, on the serious qualifications to that admiration, to which his writings have been from the first more or less open, and of which, if we may judge by his persistence in and exaggeration of his faults, he is himself as yet profoundly unconscious or unconvinced. There is a kindly spirit exhibited towards this eminent writer in the concluding paragraph of the article, which might, perhaps, with advantage, have modified some strong expressions in the preceding pages,—still we cannot but think that the objections raised by the reviewer are substantially just, and that the admirable literary execution of the article will materially assist in bringing home to some quarters, where it is much needed, a more wholesome estimate of the relations of mere physical force, whether of body or mind, to the subtler, more delicate, and less trenchant natures with which it is now the fashion to bring it into such advantageous contrast. The article contains some excellent criticisms on Mr Carlyle, as an apostle of this "latter-day" faith—and the writer draws some thoughtful and discriminating comparisons between the Prophet of Chelsea and the Crusader of Eversley. The reviewer illustrates his main objections to Mr Kingsley's "muscular" theory of right and wrong, by his unjust treatment of Shelley's character in comparison with Byron. Perhaps the reviewer himself has gone a little too far in the other direction, and has attributed to Shelley an instinctive moral sensitiveness to which he can only lay partial claim. Of the other articles of this number, we may say generally that their titles point to solid information and grave disquisition in a rather too cumulative degree. But, on the other hand, their subjects are nearly all of them so vigorously and agreeably handled, that the objection to which we have adverted is rendered more apparent than real to any but the exclusively "*light*" reader. The article which deals with the moot point of "Classic or Gothic," for the new Foreign Office, is clever and well-informed, but rather too supercilious and omniscient to be entirely to our taste. It may be very easy to define "Gothic," and to expand its windows, as well as its theory, to the requirements of modern days, but there is a little superficiality and some obscurity, if not inconsistency, in the remarks of the reviewer in illustration of these matters. If we might hazard, notwithstanding his fierce declamations and disclaimers on the subject, a conjecture as to his theological æstheticism, we should

say that he leans to "Gothic" as "Anglo-Catholic," and is as desirous of keeping out ultramontane "Classic," as if it were a Papal Bull fresh from the Vatican. His argument is throughout rather too exclusive and partisan.

"The Blind," and "Intemperance, its Causes and Cure," are articles, both in their respective ways, of much interest and ability. The former is necessarily the more curious and generally attractive —and all absolutely or approximately blind people must feel grateful to the writer for his indignant denial of Mr B. John's "preposterous assertion" that they have no idea whatever of space—and still more at the side which he has taken in the more important controversy, whether blind people are, as such, "immodest, inhumane, selfish, irreligious, and ungrateful." If wanting in faith themselves, they seem to be postulants of a rather large exercise of that faculty in others; for with every disposition to believe *with*, as well as *in*, the author of this article, we confess that some of the achievements of blind men here recorded are rather startling. With the spirit and general bearing of the article on "Intemperance" we cordially sympathise. Admirably and tersely has the writer dissected and exposed the fallacious assumptions and self-assumption of the more maniacal of the Teetotallers. His own *remedial* suggestions may, of course, admit of more discussion; but his paper shows a mind so well balanced on the subject between fanaticism and *laissez-faire*, that they may justly claim a careful consideration. We may select the following from among his more practical recommendations:—

As to the legislative measures required, we express our opinion with much doubt and diffidence, especially as it differs in some respects from that of the Committee of the House of Commons, which reported on this subject in 1854. That Committee inclined to favour the plan—suggested by Mr Robertson Gladstone, and some other gentlemen—of placing the publicans' trade on the same footing as that of the beer shops, —allowing any one, on certain conditions, to demand a license from the magistrates. We think this undesirable, and wholly needless; the appeal to quarter-sessions appearing to afford a sufficient remedy in all well-grounded cases of complaint against the caprice or partiality of the licensing sessions. And the power of not renewing the license is far more likely to be exercised—though even this is far too rarely exercised—in case of misconduct than that of withdrawing it, applicable only after legal proof of a species of misconduct most difficult to prove by legal evidence. We think that that suggestion which has reference to the assimilation of all retail licenses—the abolition of all distinction between beer shops and public houses—is shown by ample evidence to be necessary both for the protection of the revenue from illicit dealing, and for the proper maintenance of police regulations; but we would accomplish the object by repealing the Beer-house Act, and placing the granting of licenses entirely under the jurisdiction of the local magistracy, subject to appeal as at present. We would remove from wholesale dealers all those troublesome restrictions, which cannot be obeyed, and only lead to demoralisation by inducing breaches of the law; we would make the only distinction between the merchant and the publican the permission to sell liquor "to be drunk on the premises," and make the evasion of this rule punishable by heavy penalties on both vendor and purchaser. If anything be wanting to complete the power of police entrance and supervision, the defect should be amended, and every precaution taken to oblige the publican to carry on his business under the eye of a vigilant authority.

Following out a recommendation of the Committee, we would compel every publican, at the granting or renewal of his license, to produce two —or better, four—responsible sureties, not being brewers, or wine or spirit merchants, who should enter into recognisances for his good behaviour; to be forfeited in the event of any violation of the law by the publican himself, or, *at the discretion of the bench*, in case of the commission of certain specific offences within the house itself. Thus, in the first place, we should have the strongest possible guarantee for the observance of rules made by the law for the regulation of the trade; and in the second place, we should have obtained an important security against the establishment of what are known as "disorderly houses." No one would consent to risk the forfeiture of his money by entering into recognisances for the conduct of a house whose master he did not well know to be respectable. Receivers and returned convicts could only open their houses by a violation of the law, and would thus be absolutely at the mercy of the police; a large class of houses, occupying a position above theirs, but below that of the respectable publican, would be closed at once, and the honest part of the trade thrown into the hands of a better class of men.*

Much mischief is done by the music saloons, dancing rooms, and other places of amusement, attached to public houses. They are admittedly of the lowest character; are nests of immorality themselves, and form a back-door through which lads and young girls, too respectable or too young to walk into the bar, are enticed into the public house, and introduced to habits of secret drinking, to bad company, and to ultimate ruin. These allurements to a bad habit should be suppressed at once. We have no right to prevent people from drinking; but we have a right to forbid the publican to allure them by such devices as these. We demand no restrictions on the use of liquors, no hindrance on those who desire to go and buy them, when we say that all places of this kind should be brought under the act which subjects theatres to the control of the Lord Chamberlain; and that officer should make it a rule to grant no license for any such establishment to the owner or occupier of a public house, or any place next door to a public house. We do not propose that this rule should be enforced by law, as such law would inevitably prevent refreshments, such as beer or wine, from being sold in any place of entertainment; we merely wish that the Lord Chamberlain should use his discretion, by refusing to licence such places as appendages to the regular business of the publican, who is sure to regard them as means of increasing the sale of his wares, and attracting customers who would otherwise be sober enough, but who, having come to see or to listen, remain to drink and to get drunk.

* Ample evidence has been given to show that all places of public refreshment—eating houses, oyster shops, coffee houses, and the rest—ought to be subject to control similar to that exercised over public houses especially so called; and the Committee of 1854 reported to this effect. Sir R. Mayne and Mr D. W. Harvey concur in testifying, "that we find more violations of the law taking place in coffee houses, which are not under the cognisance of the police, than in public houses." These coffee shops remain open in some cases the whole night; receive those whom the public houses are obliged to turn out when the law compels them to close, and not unfrequently prove to be places for the illicit sale of spirits, exempt from the restrictions imposed on the lawful trade of their rivals. It is clear that they should be placed on a similar footing as to license and supervision; the license-fee being of course small, as we do not wish to discourage this kind of establishment, and the sureties demanded being for a less amount, and subject to less severe conditions, than in the case of houses where intoxicating liquors are to be sold.

The article on "Theodore Parker," belongs to a topic on which we do not enter in these columns. The writer has a warm appreciation of Mr Parker's merits, and differs from him chiefly in the application of the conceptions of God and man, from which they agree in starting. The point on which they are thus most at issue, is the *distinctive* value of Christianity, and (in words at least) the admission of the idea of "miraculous" interpositions. "England's policy in the Congress," takes a very sensible view of the part which it is the duty and interest of this country to play in the possible gathering of the European Powers. The writer insists on a firm adherence to the line of policy chalked out by Lord John Russell in his speeches and letter, and adds a practical hint which we trust will not be lost sight of, and without some attention to which the *positive* weight of England will be sensibly diminished:—

It may be hoped that our plenipotentiaries will have the clearest instructions and the most definite understanding on this head. It is not by a mere note of protest or expression of dissent, nor by the most strenuous and efficient advocacy in argument alone, that the sense of England would be adequately given. It is not even by a flat refusal to continue the deliberations under the conditions involved in such a contingency,—not even by throwing the whole responsibility of a wanton and arbitrary assumption of judicial power, the whole scandal and difficulty of execution, upon such parties as might be ready to take it up, and simply withdrawing into the cover of a disapproving neutrality,—that our national duty would be fully satisfied. For the reasons generally indicated above, it is impossible to lay down categorically beforehand any scheme of active measures which, under the particular circumstances of such an eventuality, it might be prudent and right to take. But we do say, that this is one of the cases in which the very amplest reserve of England's freedom and power to act in any way that she might judge right under any complication arising from such a course of action on the part of the Congress, should be expressly and solemnly claimed in her name. We should not only keep ourselves innocent of the doing, and steadily disapprove the deed, but should show ourselves ready and watchful to take advantage of any ulterior possibility, and to use at our discretion any legitimate means for annulling the consequences of an illegal transaction. There is little doubt that the thinking mass of the English nation is prepared to take at least this responsibility upon itself; and equally little doubt, that by this demeanour its influence as well as its honour will be best consulted in the approaching deliberations.

The reviewer, we should add, doubts the desirability of England being represented in the Congress by a "*regular ambassador*" at any court.

We are unable to notice the two remaining articles of this number, as we could have wished to do. The first is a clear and exhaustive exposition of Mr. Darwin's somewhat startling book on the "Origin of Species." The reviewer, who writes as one "of authority," is favourably inclined to Mr Darwin's speculations, and claims for them at least the merit of shaking comparative naturalists out of their comfortable, self-satisfied "conclusions" on the subject, and making them re-examine the grounds of their creed. As the first article in this number is the most brilliant, we should say that the last article is the most valuable and searching. "The History of the Unreformed Parliament and its Lessons," has never yet been fairly written or considered with any breadth of treatment or depth of insight. The present article is both deep and sensible, and, if we mistake not, points out for the first time the necessary and accidental excellency, and the inevitable and incidental defects, of the old parliamentary constitution of England. The writer holds that the House of Commons, in the early part of the 18th century, substantially represented the feelings and best interests of this country; that it represented a preponderating aristocratic and landed-gentry class, because they were the only class whose ascendency at that time was possible or tolerable; that to the Parliament thus constituted we were indebted for our salvation from a Stuart restoration, which would have been highly probable or inevitable under a more equalised system of representation; that, if warlike for an aristocracy, it was pacific for a national representative, and that it was in the period that followed that its inherent defects became more evident; that its conditions became altered by the growth of the manufacturing interest; and, that its previous merits ceased in a great degree to be operative In considering its later stage—that which called down on it the remorseless ire of "Reformers,"—the reviewer examines the stock arguments in favour of nomination boroughs with great acumen and originality, and demonstrates that their asserted advantages as supports to a "strong Government," and a nursery of "statesmen" are mere fallacies, or greatly exaggerated. We cannot but recommend the careful perusal of this article (which is worthy of a separate and less ephemeral existence) to all who wish to start with right notions of what has been, to the consideration of what is to be, and what should be, in a new Reform Bill.

FRASER'S MAGAZINE. January. John W. Parker and Son.

"FRASER" is in remarkable force with the new year, and seems determined to hold its own against its new monthly rivals. Among various excellent papers one will command more general interest and attention—a second biographical communication on the poet Shelley, from his friend Mr Peacock, *apropos* of the recent "Shelley Memorials," by Lady Shelley. In noticing that book, we expressed our conviction that too much and too little had been said for the matter to be allowed to rest as the Shelley family seemed disposed to leave it. Mr Peacock's interesting paper confirms our impression, and appears to render it impossible for Lady Shelley to withhold any longer those autobiographical materials which she states to be in the possession of the family. On important points, Mr Peacock distinctly contradicts her ladyship's statements, and, by a simple reference to date, shows that some other line of defence must be taken up, if a rather unfavourable opinion is to be escaped from in the case of the poet's treatment of his first wife. Mr Peacock brings forward the remarkable fact that Shelley and Harriet Westbrook were re-married at St George's, Hanover-square, in the presence of the lady's father, "in order to obviate all doubts," as late as the 24th of March, 1814, and argues therefrom, fairly enough, that no disinclination on the part of the poet to his wife could have then arisen; or, instead of being re-married according to the English form, he would have sought, and might have easily obtained a divorce according to the law of Scotland, in which kingdom the first marriage took place. He also states positively—in contradiction to Lady Shelley—on the authority of the first Mrs Shelley herself, that the separation did not take place by mutual consent, but was simply a desertion of his wife by the poet for the daughter of Godwin. Of his state of mind during the struggle which preceded this step, Mr Peacock gives the following graphic and significant account:—

He might well have said, after first seeing Mary Wollstonecraft Godwin, "*Ut vidi! ut perii!*" Nothing that I ever heard in tale or history could present a more striking image of a sudden, violent, irresistible, uncontrollable passion, than that under which I found him labouring when, at his request, I went up from the country to call on him in London. Between his old feelings towards Harriet, *from whom he was not then separated*, and his new passion for Mary, he showed in his looks, in his gestures, in his speech, the state of a mind "suffering, like a little kingdom, the nature of an insurrection." His eyes were bloodshot, his hair and dress disordered. He caught up a bottle of laudanum, and said: "I never part from this." He added: "I am always repeating to myself your lines from Sophocles:—

Man's happiest lot is not to be,
And when we tread life's thorny steep,
Most blest are they, who earliest free
Descend to death's eternal sleep."

Again, he said more calmly: "Every one who knows me must know that the partner of my life should be one who can feel poetry and understand philosophy. Harriet is a noble animal, but she can do neither." I said: "It always appeared to me that you were very fond of Harriet." Without affirming or denying this, he answered: "But you did not know how I hated her sister."

The term "noble animal" he applied to his wife, in conversation with another friend now living, intimating that the nobleness which he thus ascribed to her would induce her to acquiesce in the inevitable transfer of his affections to their new shrine. She did not so acquiesce, and he cut the Gordian knot of the difficulty by leaving England with Miss Godwin on the 28th of July, 1814.

Of the first Mrs Shelley, Mr Peacock gives the following description:—

Few are now living who remember Harriet Shelley. I remember her well, and will describe her to the best of my recollection. She had a good figure, light, active, and graceful. Her features were regular and well proportioned. Her hair was light brown, and dressed with taste and simplicity. In her dress she was truly *simplex munditiis*. Her complexion was beautifully transparent; the tint of the blush rose shining through the lily. The tone of her voice was pleasant; her speech the essence of frankness and cordiality; her spirits always cheerful; her laugh spontaneous, hearty, and joyous. She was well educated. She read agreeably and intelligently. She wrote only letters, but she wrote them well. Her manners were good; and her whole aspect and demeanour such manifest emanations of pure and truthful nature, that to be once in her company was to know her thoroughly. She was fond of her husband, and accommodated herself in every way to his tastes. If they mixed in society, she adorned it; if they lived in retirement, she was satisfied; if they travelled, she enjoyed the change of scene.

With this desertion by the poet, his wife's death, however, had no immediate connection, as it did not occur till December, 1816, taking place in the Serpentine, and not in a pond at Bath, as stated by Captain Medwin. Mr Peacock bears testimony to the agony of Shelley on the occasion, and records a remark of his at a later period, which shows that secret remorse clung to his memory and would not be shaken off. He corrects also the notion that Shelley's elder children were taken from him on the ground of his Atheistic writings. It was on the fact of his *practical* illustration of the light in which he regarded the marriage tie, that the decree of the Chancellor proceeded. He gives some curious instances of Shelley's strange fancies and morbid delusions, and of his untruthfulness on such occasions, arising probably from a desire to lend plausibility to the delusion to which he had committed himself. Of the poet's residence in Italy, Mr Peacock gives a rather different representation from that which Lady Shelley—following the widow of Shelley—has put forward. From letters, Mr Peacock shows that the poet eagerly desired a termination to his self-inflicted exile, and was weary of Italian sunshine and separation from his English friends. That he concealed this feeling from his wife, whose desires on the subject were so different, is, as Mr Peacock suggests, quite natural. The feeling of dejection at Naples, however, did not, he says, originate in solitude, as Lady Shelley supposes, since the Shelleys were in constant society with a large circle of friends at that time. Altogether, this paper is by far the most important contribution to the "Shelley Memorials" that has yet appeared, and will, we hope, be the herald of equally valuable disclosures from other quarters.

MACMILLAN'S MAGAZINE. No. III.

THE continuation of the tale "Tom Brown at Oxford," which is the great attraction of this magazine, is very brilliant and successful. We confess to preferring it both to Mr Trollope's more artistic, but also more pallid, purposeless, and less vigorous tale in the "Cornhill Magazine," and also to Mr Thackeray's own contribution to that rival periodical.

The Poet-Laureate has contributed to this number a poem, which is certainly *not* one of his finest, but nevertheless marked by his characteristic genius. Professor De Morgan has a characteristic and amusing paper on "Scientific Hoaxes." The editor does something less than justice to Louis Napoleon's writings. Miss Mulock has contributed an essay which has nothing in it,—as indeed no *essay* could have,—of her characteristic capacity. There is a paper on "American Humorous Poetry" which will be read. And Mr Blakesley has contributed an article on a subject on which he is eminently qualified to speak, "Morocco and Northern Africa." The "Colloquies of the Round Table" have, we are very happy to say, entirely disappeared. Altogether we prefer "Macmillan's Magazine" to its Cornhill rival. It has more of distinct aim and purpose, though it still wants unity of design. We trust it will succeed.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The heavy fall which unexpectedly took place on the Bourse in the latter half of last month just as a great number of speculators had operated for a rise, has caused one of the most disastrous monthly settlements that has been known for a long time past. Numerous "executions" of people unable to meet their engagements have taken place, and more are expected. The change in the Imperial policy with regard to Italy, though it has had the advantage of re-establishing a good understanding between France and England, which is a great thing in the eyes of the money market, is unfortunately accompanied with difficulties of the very gravest kind as regards Rome and Austria, and as regards the clergy (a powerful body) and certain political parties in France. It has consequently created serious uneasiness on the Bourse. The postponement of the Congress, and the probability that after all the postponement may be indefinite, have increased that uneasiness; and, to-day, it has been further augmented by the retirement of Count Walewski from the Ministry of Foreign Affairs, and by the appointment of M. Thouvenel, the Ambassador at Constantinople, to be his successor,—a diplomatist who is supposed to entertain no friendly feeling towards England. At the present moment, the Bourse is in as bad a state as it well can be;—and the discouragement is apparently as profound as it was last year when war with Austria was decided on. The following are the quotations of the week:—

	Thursday, Dec. 29.		Thursday, Jan. 5.

The long-expected report of the Minister of Finance on the financial situation of the country has not yet appeared. As it is generally brought out in November or December, the delay has given rise to a good deal of speculation.

The bank which was recently established under the name of "Société Generale de Credit Industriel et Commercial" advertises that, in order to encourage the *cheque* system, it will accept deposits of not less than 120*l* English at interest. The immense facilities afforded to commerce by the use of cheques was pointed out years ago by Michel Chevalier and other economists, and has been repeatedly insisted on since; but so strong is routine in this country, even among intelligent men of business, that chequea are even now but little known or appreciated.

Efforts are still being made, chiefly by people connected with the great seaports, to induce the Government to make large reductions in the duties on raw materials, or at all events on sugar and coffee, which form an important part of the subsistence of the people. But the clouds which have suddenly come over the political horizon will, it may be feared, inevitably delay Customs reforms, however much they may be needed.

The Bank of France having fixed its dividend for the second half of last year at 62f, the total dividend of the year (that of the past six months having been 53f) will be 115f. The dividend of 1858 was 114f.

The Credit Foncier Company announces that for the second six months of 1859 it will make a "provisional distribution" of 6f 25c per share. As the same sum was distributed for the first half-year, the shareholders will receive an amount equal to 5 per cent. on the calls they have paid up; and they will obtain a further sum when the definitive dividend of 1859 shall be declared in the annual meeting to be held in April next.

A vast number of companies are now, as usual at this epoch, making the payment of the half-yearly or yearly interest on shares and bonds, or of sums on account of dividend. Amongst those which are doing so are the Northern, Eastern, Orleans, Lyons and Mediterranean, Southern, Western, Geneva, Ardennes, Dauphiné, and Besseges to Alais railways; —the Credit Mobilier (25f per share on account), the Paris Omnibus Company (25f per share on account), the Immobilière Company of Paris, the Services Maritimes of the Messageries Imperialea, the Compagnie Generale de Eaux, the Union Financière et Industrielle, the Union des Gaz, the Grand' Combe, the Société Cail et Cie, the Union of Switzerland Railway, and the Banque Generale Suisse; —the Austrian railways;—the Madrid and Saragossa, the Seville and Xeres, the Seville and Cadiz, the Cordova and Seville, and the Northern of Spain railways; and the Spanish Société Mercantile.

A number of merchants and shipowners of Bordeaux have called on the Government to allow African gum to be imported free of duty. At present this article pays 10f the 100 kilogs, or, with what is called the "double decime," 12f; and the Bordeaux people represent that such a duty is perfectly exorbitant on an object which is not worth more than 80c the kilog; and which, besides, is required for numerous uses. The Treasury could well afford to give up the duty, seeing that it only produces annually about 400,000f.

Subjoined is an account of the markets:—

Flour.—The market at *Paris* has been calm since the last report: yesterday, the superior sorts were at 57f to 57f 50c the sack of 157kilogs; good sorts, 55f to 56f; ordinary, 52f to 54f. In four marks business was limited, purchasers requiring a reduction of prices: for the current month the quotation was 56f 50c; for January and February, 57f; for February alone, 57f 50c.

Wheat.—At *Paris*, yesterday, the market was thinly attended, and business was not active. Choice was 31f to 31f 50c the sack of 120 kilogs; good qualities, 30f to 30f 50c; ordinary, 29f to 29f 50c. During the week there has been a rise of from 9c to 1f in 19 provincial markets; a fall of from 12c to 1f 30c in 78; and 52 markets have remained unchanged.

Cotton.—At *Havre*, the brokers fixed the closing prices of the week ending Friday at 1f to 2f below those of the preceding week:—low New Orleans was consequently 103f the 50 kilogrammes, and very ordinary ditto, 108f. The sales of the week were 7,932 bales, and the importations 18,472. The stock on the 1st of the present month was 45,130 bales; same date last year it was 136,690; of 1857, 82,600; and of 1856, 46,800. This week business has been calm, and yesterday low New Orleans was at 103f.

Coffee.—At *Havre*, for the week ending Friday, a fair amount of business was transacted. The sales were 2,000 sacks Hayti at 71f to 72f 50c the 50 kilogs in bond; 1,200 sacks Gonaires, 73f 50c to 74f; 1,130 sacks Rio, not washed, 72f to 74f; 250 ditto, washed, 80f to 81f 50c; 375 sacks Manilla, 129f to 129f 50c duty paid; and 25 sacks Ceylon, 126f. Some lots of damaged were also sold by auction. The arrivals were dull. The stock on the 1st of the present month was 61,767 sacks and 324 casks. Several sales have been made this week: Hayti, 72f to 73f 50c in bond; Rio, 70f to 73f 50c; Ceylon native, 122f to 125f duty paid. At *Bordeaux*, last week, the only transaction recorded was the sale of about 600 sacks Mysore at 137f 50c to 141f duty paid. Nothin has been done this week. At *Nantes*, last week, nothing was done. This week nearly 6,000 sacks Java have been sold, but the price is not stated. At *Marseilles*, last week, business was calm; the sole sale being about 600 sacks Brazil at 68f to 75f.

Sugar.—At *Havre*, in the week ending Friday, about 1,250 casks of French West India were sold at 59f duty paid; and 2,972 casks Havana at 36f to 37f, in bond. The arrivals exceeded 3,600 casks or sacks. This week, Reunion has been at 63f; Havana, 36f 75c; French West India, 59f 50c. At *Bordeaux*, last week, only a small lot of French West India was sold at 59f, and 800 bales Reunion at 63f. The stock on the 1st of this month was 1,250 casks French West India, and 10,618 bales Reunion. This week nearly 4,000 bales Mauritius have been sold at 66f 25c. At *Nantes*, last week, 3,722 sacks Reunion went at 63f to 63f 72c; 7,421 Mauritius at prices kept secret; and some lots of French West India at 59f 50c to 60f. This week, about 20,000 sacks Reunion have been sold at 62f to 63f. At *Marseilles*, last week, some large lots of Reunion were sold at 61f to 66f.

Indigo at *Havre*, in the week ending Friday, was calm, but 22 cases Bengal were sold at prices kept secret. There were no arrivals. The stock on the 1st of this month was 1,568 cases; same date last year it was 1,671; of 1857, 2,077; and of 1856, 1,181. Some small sales have been made this week, but prices are not stated. At *Bordeaux*, last week, about 100 cases were sold at prices previously established. A small lot of Bengal has been sold, but prices are not given.

Tallow.—At *Havre*, last week, no sales were made, and there were no arrivals. This week the article is not mentioned. At *Paris*, yesterday, the 100 kilogs were 133f 20c inside Paris,—126f outside: a fall of 5f on last week's quotations. At *Marseilles*, last week, 30 tons of Italian were sold at 130f the 100 kilogs, and some Algerian at the same price.

Hides.—Business at *Havre*, in the week ending Friday, was active, and prices were firm. 2,830 dry La Plata went at 145f the 50 kilogs duty paid; 292 hull ditto, 151f to 163f; 200 Rio Grande salted, 83f; 1,160 Rio Janeiro salted, 69f; 236 Martinique salted, 72f 50c; 500 New York salted, 62f 50c; 4,736 Mazatlan, 130f. The arrivals exceeded 24,000. This week, Buenos Ayres dry have been quoted at 160f duty paid; ditto salted cow, 85f in bond; Australian salted, 60f duty paid; Rio Janeiro salted, 69f in bond; New York salted, 63f in bond.

Wool.—The sales at *Havre*, in the week ending Friday, were 75 bales La Plata, unwashed, at 1f 45c to 2f 75c the kilog in bond; 61 bales Chili, unwashed, 1f 5c to 1f 80c; 24 bales sheepskins, La Plata, unwashed, 95c to 1f 30c; and 1 bale lambs', 1f 17½c. The arrivals exceeded 500 bales. This week, Buenos Ayres, unwashed, has been quoted 2f 30c.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was at 82f to 83f the hectolitre; Montpelier of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f.

Brussels, Jan. 3.

In a letter, some weeks back, I drew attention to the fact that the principal coalowners of the district of Mons were banded into a society for the avowed purpose of selling coal as dearly as possible in Belgium and the parts of France in which they have no competition to fear, and as cheaply as possible in the parts of France in which they have to encounter the competition of the English. In other words, they sell coal at Rouen and in the rest of Normandy some 20 per cent. cheaper than they do in Belgium and in the North of France;—and they are able to make that reduction in the former district by charging exorbitantly in the latter. On the whole, their plan, though it did no great harm to the English, was for some years very advantageous to them; but of late it has not worked according to their expectations. Thus, in 1854, their export to France was about 17,840 tons, and that of the Charleroi district, where no confederation of coalowners exists, was only 6,690 tons; but in 1858 their export fell to 17,564 tons, whilst that of Charleroi rose to 11,307. Taking Rouen and the neighbourhood alone, where they principally opposed the English, the results are not more favourable. In 1854 they sent there 916 tons, and the English 2,102; but in 1858 they only sent 620 tons, whilst the English disposed of 4,945. Their sale in Belgium has, besides, not kept pace with that of the Charleroi pits, and their profits have declined. The number of pitmen in their service, and the average wages earned by each, have likewise fallen off, whilst those in the Charleroi district have increased. These facts prove once more the exactness of the well-known economic fact, that in articles of general consumption a partial monopoly is really not so advantageous in the long run even to producers themselves as liberty would be. But this fact, it appears, has not yet penetrated the obtuse intelligence of the Mons gentry, for they are at this very moment talking of renewing their iniquitous combination for an indefinite period. It is suggested that the Government, in justice to the large portion of the Belgian people who are compelled to pay more than they need do for Mons coal, ought to put in force against these coalowners the law on coalitions; and learned advocates declare that there is no manner of doubt that their association is illegal. It is suggested, also, that the French Government might deal them a deadly blow by abolishing the absurd and iniquitous system of import duties on coal now in force in France,—a system by which coal introduced by the coasts nearest England, that is to say from England, pays more than double that which is taken in by the northern frontier, that is from Belgium. But, unfortunately, the Belgian Government does not like the idea, from political considerations, of attacking a powerful body of monopolists: and as to the French Government, it notoriously dreads making tariff reforms, especially such as would be in any way useful to perfidious Albion;—besides which it unluckily happens that a good many of the shareholders in the Mons pits are French —a circumstance which will make the French Government still more indisposed to grapple with the evil complained of.

COMMERCIAL AND MISCELLANEOUS NEWS.

Advices from Bombay to the 12th ult., state that trade generally was in a very inactive state.

The quantity of gold-dust imported into the Sydney branch of the Royal Mint for the purpose of coinage from the 1st of January to the 31st of October, 1859, was 264,410 ounces. The amount of gold coin issued during the same period was 718,000 sovereigns and 321,000 half-sovereigns—total value, 878,500*l.* During the same period of 1858, the quantity of gold-dust received for coinage was 285,612 ounces, and the amount of coin issued 861,500 sovereigns and 486,000 half-sovereigns—total value, 1,104,500*l.*

The following is a statement of the operations of the U. S. Branch Mint at New Orleans, for the month of November, 1859:—

According to a telegram from Cadiz, the total export of sherry for the past year has reached 45,919 butts, against 28,729 in 1858, 50,707 in 1857, and 54,610 in 1856. The two largest exporters were F. W. Cosens, 3,561 butts; and Gonzalez Dubosc and Co., 3,530 butts.

The latest advices from Jamaica are to the 10th of December. Coffee continued scarce, and sales of ordinary had been made at 39s to 40s per 100 lbs in small quantities. Sugar had ranged at from 16s to 22s per 100 lbs; fair was exceedingly scarce. There were no sales of pimento to report. The present pimento crop is a small one throughout the island; in fact, it has been all but an entire failure in the principal pimento districts. The yield this season is not expected to exceed 15,000 bags, against 30,000, 100,000 and 70,000 bags in the three previous years. One-half of the present crop had been exported already, and the other half was in the hands of speculators with the exception of perhaps 1,500 bags, which were held by planters at 2½d per lb. Trinidad advices are to the 11th ult. The weather had been excessively wet, and it was feared that, should it continue, the crop would suffer very materially. There was very little animation in the market at Trinidad.

Advices from Rio are to the 8th ult. Business in coffee had been extremely limited. Sales from the 7th of November to date had not exceeded 80,850 bags, which were taken at a decline of about 100 rs on last quotations. The stock on sale had accumulated to 220,000 bags. Urgent wants of sugar for consumption, chiefly of white, which continued arriving very sparingly, had caused a further rise; large quantities of the new crop being, however, expected from the north, a material decline was anticipated. From Bahia our correspondent writes that there was no new sugar yet, and that coffee was very fine this season. Unimportant lots of brown sugar had been disposed of at 2,250 rs and 2,300 rs per arroba, and for a larger list, the only one remaining in the market, 2,400 rs was demanded. No whites offering; a few cases of fair quality had been sold in second hands at 3,400 rs. The article was in demand, but purchasers could not supply their wants. Considerable sales of Bahia coffee, seconds, had taken place latterly at prices ruling from 5,150 rs to 5,250 rs per arroba.

An account of the amount of bank notes authorised by law to be issued by the several banks of issue in Ireland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 17th day of December, 1859:—

There has been a fair amount of business done in cotton this week. The trade have bought more than their consumption, and there has been a fair demand for the better qualities for export, and a little for speculation. In the middle of the week many sales were made at a slight decline, but during the last few days the better grades of American have been somewhat more firmly held. We make no alteration in our quotations. Egyptian of the better qualities move readily at full prices, but the inferior are still unsaleable. Brazil have been sold on slightly easier terms. East India are without alteration. The sales to-day are estimated at 10,000 bales. The reported export amounts to 11,430 bales, consisting of 6,390 American, 30 Brazil, and 5,010 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Although the business doing in manufactured goods this week for export purposes has been by no means extensive, prices, under the influence of a steady home demand, have been well supported. In wool, the transactions have not increased, yet the stocks in manufacturers' hands are very moderate even for the time of year. Iron has been less active, and the quotations have shown a tendency to give way. Coals, too, have sold slowly, yet we have very little change to notice in the value.

MANCHESTER, Jan. 5.—Eastern accounts, of which the latest has been received to-day to the 16th ult. from Calcutta, have continued to report languor and decline in our leading staples; but the market here has been entirely uninfluenced, and both yarns and cloths for India have shown an advance. Transactions have daily been extensive, probably exceeding in one week those of the two or three weeks ending last year. Generally speaking, export yarns have been sold rather freely at ⅛d to ¼d over the recent highest offers. Home trade yarns have had a steady sale at full rates; some qualities mostly affected by dealings in shirtings and printers, as 32's twist, have had a comparatively large sale at ⅛d advance. Shirtings have been sold freely both for India and China at 1½d to 3d per piece over the rates of last week. Printing cloths have again been contracted for liberally, the turn of the year having induced printers to sort up stocks. Other articles have been sold well, and the appearance of some steadiness in the cotton market has not been without effect.

Huddersfield, Jan. 3.—This market has opened briskly. Stocks in the manufacturers' hands, in the Cloth-hall, and shops are, however, so unusually low for the season, that great difficulty is experienced by buyers in making selections. The local wool trade is, of course, favourably affected by the prosperous state of the manufacturing department, and, contrary to precedent at this season, numerous parcels are constantly selling.——Leeds.—The inquiry was principally for goods suitable for the season, and also, in addition, good specimens of volunteer and seal and doeskin cloths. Stocks remain very low in the warehouses.——Rochdale.—Wool—Scarcely anything has been done by our staplers, who keep up their prices very firmly. Brokes, skins, and lambs' are all said to be short in stocks. All our machinery continues to be well employed, the demand for the home market being as active as ever.——Bradford.—Wool—There has been very little doing in the warehouses. The supply in the market is a fair average for this season, but prices are so high that buyers are cautious not to take larger supplies than their actual wants require. Yarns—There is a stillness in the yarn market; business has not resumed its wonted activity. The continental buyers are open to make contracts where prices admit, but spinners are getting into a fix, owing to the high price of wool. Pieces—Fancy goods are in very large request, and none in stock. In fact, so busy are the manufacturers of these goods, that merchants find it extremely difficult to get their orders executed in the required time. The animation which characterises this department of the trade is almost without precedent.——Barnsley.—The linen trade of this town and district has lately shown some signs of improvement, and the operatives of the trade are tolerably well employed. There is a better demand for yarns and goods, and hopeful expectations of a prosperous trade for some time to come are entertained.——Leicester.—The hosiery trade in all useful branches is in a healthy state. The operatives generally are well employed, and wages are as high, and in several cases higher, than for some time past. In the country hosiery districts, machinery is well employed, and business is in a satisfactory condition. Yarns are selling at late prices. The wool market is steady, without change in price.——Nottingham.—There is very little alteration to report in the condition of the lace trade. In the cotton branch, plain goods are more than any other description in request. A few orders have been received for fancies, but this branch is extremely quiet. In the silk lace trade, business continues very languid. There is a fair amount of business doing in hosiery for the time of the year. Some good orders from the United States have been received, and the trade generally is in a satisfactory state. Yarns are firm, without change in prices.——Belfast.—The demand for yarns has fallen off, yet prices are supported. Linens, generally, commands full quotation, and the stock on offer is only moderate.——Dundee.—Trade continues sound and healthy, at very full quotations.——Wolverhampton.—Mr S. Griffiths reports the prices of iron as follows:—Finished common Staffordshire bars, 7*l* 10s at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latin, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*; and all other sorts in proportion. Pig-Staffordshire cold blast, 4*l* 10s; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 12s 6d to 3*l*; grey forge cinder pig iron, 2*l* 12s 6d to 2*l* 17s 6d; melters, Nos. 1, 2, and 3, 2*l* 15s to 3*l* 2s; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 10s.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, Dec. 21.—Flour and Meal.—The market for State and Western continues inactive and irregular, and prices strongly tend in favour of the purchaser. There has been little or no demand for export or speculation, and the somewhat limited transactions have been almost wholly for the Eastern trade; sales for the three days comprise 14,400 bbls, closing dull. Southern flour is also dull, with a declining tendency; the sales are 2,300 bbls, including 750 yesterday, closing heavily at 5.95 dols to 6 dols for Brandywine, 6.50 dols for Georgetown, and 5.50 dols to 6.20 dols for Baltimore; all other kinds are unchanged. Grain.—Inactivity is still the most noticeable feature in the market for wheat, and the inquiry has been chiefly for immediate wants of consumers. Sales here since Friday have been light, amounting to only about 21,000 bushels, including 6,000 Racine at 1.20 dol; 350 white Western, 1.40 dol; 11,700 red Southern, 1.25 dol to 1.30 dol; and 100 white Kentucky, 1.55 dol, yesterday, closing dull and heavy at our previous prices. Corn was buoyant on Saturday and Monday, and holders obtained full prices. The market was dull yesterday, however, and prices tended downward; the sales comprise 31,900 bushels, at 92 to 98 cents for yellow Southern and round yellow, and 90 to 96 for mixed Western; other kinds are steady.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

The holidays have, to some extent, interfered with the usual course of the trade; certainly millers, generally, have evinced no disposition to purchase beyond actual events, although there has been no pressure of supply. Compared with last week, no quotable change has taken place in prices. Good and fine English wheats have been disposed of at full currencies; but low and damp parcels have been dull in the extreme, at barely late rates. The arrivals of foreign wheat have continued very limited, and the quantities on offer have fallen off. However, importers have continued very firm in their demands, and the quotations have been supported.

The barley trade has been in a healthy state, but we have no change to notice in value. Fine malting parcels are still very scarce. New malt has moved off steadily—other kinds slowly, on former terms. The oat trade has continued in a healthy state, and prices have, in some instances, exhibited an upward tendency. Beans have ruled heavy, at 1s to 2s per quarter less money, and the value of peas has given way 1s per quarter. Notwithstanding that very little foreign flour is now on offer, English qualities have been by no means active at late quotations.

Most of the continental markets have ruled somewhat heavy for wheat for export purposes; nevertheless, very little change has taken place in prices. Barley and oats have sold steadily, at fully late rates; but other articles have been dull and drooping. The latest advices from the United States are to the effect that both wheat and flour were dull and lower to purchase.

In Scotland, fine wheat, barley, and oats have moved off steadily, at full prices. All other kinds of produce have met a dull inquiry, at barely previous rates. The shipments to the South have continued seasonably good.

The Irish markets have been somewhat heavy for wheat. In prices, however, very little change has taken place. Spring corn has maintained its previous value. The accounts in reference to the potato crop are very unfavourable.

A very limited supply of English wheat was on sale here, to-day. Fine dry samples were taken off readily, at fully Monday's prices; but inferior parcels were a dull inquiry. Foreign wheat realised extreme rates with an improved inquiry. Barley and oats were firm in price; but all other articles were very dull, at barely late rates.

Mr Ed. Rainford reports the arrival of 27 vessels off coast laden with grain, since the 30th ult. In cargoes afloat, a fair business has been transacted.

The London averages announced this day were:—

Seven Day and other Bills	795,595		
	41,127,420		41,127,420

Dated the 5th January, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,620,690	Securities	31,938,691
Public Deposits	9,159,556	Coin and Bullion	16,460,824
Private Deposits	13,409,327		
	45,189,573		48,399,515

The balance of Assets above Liabilities being 3,209,942*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£1,088,612
A DECREASE of Public Deposits of	645,174
An INCREASE of Other Deposits of	337,917
A DECREASE of Government Securities of	1,375
An INCREASE of Other Securities of	1,185,329
A DECREASE of Bullion of	349,230
An INCREASE of Rest of	53,369
A DECREASE of Reserve of	1,345,850

Owing to the draught upon the Treasury deposits, combined with the active commercial demand for money, the reserve has experienced a very heavy reduction. This item now little exceeds nine millions. There is also a moderate decrease in the bullion.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 19,341,669	£ 20,011 824	£ 20.349,025	£ 21,704,045	£ 22,620,690
Public deposits	10,321,413	7,592,202	7,190.661	9,632 209	9,159,556
Other deposits	9,735,268	10,096,525	14,845,877	13,580,106	13,409,327
Government securities	14,375,681	11,600.151	7,765,309	10,805,931	10,923,782

Exchange on Paris (short)	25 40 45	25 20 25	25 20 25	25 10 15	25 10 15
— Amsterdam ditto	12	11 13 14	11 15 16	11 15 15½	11 12½ 13
— Hamburg (3 months)	13 12	13 6¼	13 7 7½	13 6 6¼	13 4¾ 5¼

At the corresponding period of the year 1850, a quarrel was brewing between Prussia and Austria. There were rumours of changes in the Cabinet of Prince Louis Napoleon. The French 3 per Cent. Rentes were quoted as low as 56½, but English and foreign capitalists were competing eagerly for the new Paris and Avignon and other railway concessions. Then, as now, the world was kept waiting a long time for the American President's message.

In 1857, the Conferences at Paris were occupied with the tracing of the frontier between the Danubian Principalities and Bessarabia. The English funds were kept down to some extent by the Neufchâtel dispute between Prussia and Switzerland, but still more by the high value of money. The project for the establishment of a National Bank of Turkey occupied attention, the first firman having been obtained from the Sultan; but the scheme, in its original form, had a broad basis, and the capital spoken of was ten millions sterling. The prospectuses of the Oude and Central Oude Railway Companies—the latter of which is now being wound up—had been issued.

In 1858, the question of the union of the Danubian Principalities under one head attracted notice. Reschid Pacha, the able Grand Vizier of Turkey, had just died. The progress of the war in India was still anxiously watched. The Bank of England, on the 7th January, 1858, lowered their rate of discount from 8 to 6 per cent., the increase in the bullion and reserve being extraordinarily rapid.

In 1859, the French Emperor's speech to the Austrian Ambassador on New Year's Day had excited a sensation. Its full significance, however, was not yet understood; and rumours were in circulation that a reassuring note would shortly appear in the *Moniteur*. The French funds were falling, but were still as high as 71¼. Consols, which were quoted 96¾ ex div. at the end of the previous December, commanded 96¼ on the 6th January. Foreign stocks, including Turkish Bonds and Lombardo-Venetian Railway shares, were chiefly agitated, yet the Turkish Loan of 1854 was as good as 91, and that of 1858, 82, or 3 discount. Payments on the latter, as well as on the new Chilian Loan, were in progress. The tenders had just been sent in for the new Victoria Railway Loan of 1,000,000*l*. The demand for money had temporarily revived, and the "other" securities in the Bank had increased a million and a quarter in a week.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,955,758*l*; in 1857, a deficiency of 9,198,773*l*; in 1858, a deficiency of 10,815,129*l*; and in 1859, a deficiency of 4,629,636*l*. In 1860, the deficiency is 7,683,582*l*.

The demand for money this week has been quite as active as was anticipated. Heavy revenue payments, coupled with the engagements maturing in the first week in January, have had the usual effect. In many quarters money has proved scarce; and the majority of the discount establishments have been obliged to resort to the Bank of England for the advances usual at this season. The Bank's business has consequently undergone a great expansion; and, to a certain extent, the coming dividends may be said to have been anticipated. The bulk of the advances fall repayable at that establishment between the 9th and 14th. Already, however, the pressure is subsiding, and money has become somewhat more abundant, in anticipation of the release of the dividends. Notwithstanding the calls upon the market on account of new projects, there is an expectation that the market will be better supplied next week. To-day the best bills were discounted in Lombard street at 2½ per cent., but the demand, both there and at the Bank, was active.

The dividends will be payable to the public at the Bank on Monday, the 9th.

The arrivals of specie and bullion since the date of our last report have been large, comprising a total of about 660,000*l*, of which 390,000*l* is from Australia. The whole goes away, the continental demand continuing; but the withdrawals from the Bank, which commenced last week, have been checked. 8,000*l* in gold was taken out to-day for exportation.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—A large business has been done during the past week. Since our last (29th Dec., 1859), the arrivals have been considerable, and the whole amount has been taken for exportation, together with about 30,000*l* purchased from the Bank of England. The ships arrived are:—Edinburgh, from New York, with 45,000*l*: Persia, from New York, with 30,000*l*; Anglesea, from Melbourne, with 280,000*l*; Lew Chew, from Melbourne, with 109,000*l*; La Plata, from the West Indies, with 8,000*l*; Tyne, from the Brazils, with 41,394*l*. A further amount of gold, saved from the wreck of the Royal Charter, will be sold in a day or two. The following table gives the number of ounces of gold that have arrived from Australia during the past three years:—

AMOUNT OF AUSTRALIAN GOLD ARRIVED DURING THE YEARS 1857, 1858, AND 1859.

1857.	1858.	1859.
oz.	oz.	oz.
2,542,718	2,431,277	2,457,736

Silver.—There have been some considerable amounts of silver imported from the Continent during the past week. The La Plata has brought 186,000*l* from the West Indies, and the Euxine 6,254*l* from the Peninsula. The bars bought by the La Plata have been sold at 62d per oz standard, and we quote that price as very firm.

Mexican Dollars.—The dollars brought by the La Plata have been sold at 61⅞d, and that price we consider very firm. The Fulton, from New York, brought 10,000*l* in dollars.

Exchange may be quoted for Bank paper 2s 0¼d to ⅜d, both for Bombay and Calcutta, 60 days' sight, with a fair business doing, particularly Bombay, inclining the rate for the latter more to ⅜d than ¼d. Madras, 60 days' sight, 2s to 2s 0⅛d.

India Government Loan Notes continue in excellent demand, at im-

proving prices. Very large amounts change hands from day to day, and we quote sales of 5½ per Cents. 103¾, or 2s 0⅞d to 2s 15-16d. 5 per Cents. are very scarce, but we quote them nominal at 1s 11¼d.

Quotations for Bullion.—Gold—Bar gold, 77s 9½d per oz std; bar gold refinable, 78s 1d per oz std; South American doubloons, 75s 3d to 75s 6d per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2d to 5s 2⅛d per oz std; bar silver, containing 5 grs gold, 5s 2⅛d per oz std; Mexican dollars, 5s 1⅞d to 5s 2d per oz; Spanish dollars (Carolus), 6s to 6s 3d per oz, last price; five-franc pieces, 5s 0⅛d per oz.

The Indian 5 per Cent. rupee paper has now reached a price here equivalent to 96⅞ to 97⅛, and the 5½ per Cent., 104 to ¼. Investments continue to be made daily, and extend to all other classes of Indian securities, including the railways.

The continental exchanges this afternoon were flat. The Dutch exchange has fallen since last week. The Austrian on the other hand has risen, owing to the revival of political distrust. As regards other places, the variations are not important.

Advices have been received of the sailing from Melbourne for England of the ships Water Nymph, Sussex, Donald McKay, and Commodore Perry, with an aggregate of about 360,000*l* in gold. These vessels are not yet due.

A very important financial operation—the conversion of the public debt of Canada—was inaugurated on the evening of Saturday, the 31st, Dec. by the issue of the following notice by Messrs Baring Brothers and Co., and Glyn, Mills, and Co.

London, 31st December, 1859.

Messrs Baring Brothers and Co., and Messrs Glyn, Mills, and Co., the financial agents in England for the Province of Canada, beg to state that they are prepared, in conformity with the annexed statement, to receive applications for the loan, therein authorised, of 2,800,000*l* (say two millions eight hundred thousand pounds of stock), bearing 5 per cent. interest, either in bonds to bearer, or in inscriptions, on the following conditions:—

Applications must be delivered at one of the respective offices of Messrs Baring Brothers and Co., or Messrs Glyn, Mills, and Co., on or before Tuesday, 10th January, with a specification whether the amount applied for be required in bonds or inscribed stock.

No application will be received after three o'clock p.m., on Tuesday, 10th January.

The letters of allotment will be transmitted with as little delay as possible, and upon the amount allotted the payment of an instalment of 10 per cent. will be required on Monday, 16th January, at one of the banking houses of Messrs Baring Brothers and Co., or Messrs Glyn, Mills, and Co., where the subsequent instalments must also be paid, being in all as follows:—

8	per cent. on	1st February, 1860,	Payable in cash, or in Provincial Currency Bonds, or Municipal Loan Fund Bonds.
8	—	1st March, —	
8	—	17th April, —	
8	—	16th May, —	
8	—	16th June, —	
* 8	—	17th July, —	
8	—	16th August, —	
8	—	17th September, —	
8	—	16th October. —	
8	—	16th November, —	
* 10	—	15th January, 1861,	
90	per cent.		

First instalment 10 per cent. paid on allotment on 16th January.

100

* From these amounts to be deducted 2½ per cent. interest due 1st July, 1860, and 1st January, 1861, reducing those instalments respectively to 5½ per cent. and 7½ per cent.

Discount at the rate of 5 per cent. per annum will be allowed on the payment in full in cash in anticipation of the above-mentioned instalments, but no discount will be allowed except on payments in full and in cash.

Interest at the rate of 5 per cent. per annum on the nominal capital commences from 1st January, 1860, and the half-yearly dividends due 1st July, 1860, and 1st January, 1861, will be deducted from the instalments due in those months.

On default of payment of any instalment on the day named, all previous payments will be forfeited, and the party so in default shall not be entitled, after the day fixed for the payment, to claim any bonds, certificates of inscription, or dividends.

Bonds of 1,000*l*, 500*l*, and 100*l* each, with half-yearly coupons payable at the offices of the provincial agents in London (where the principal when due will be paid), for twenty-five years, and a talon or authorisation for the receipt of further dividend warrants when required, and when the principal of the bonds shall not have been paid, will be issued as soon as they are received from Canada, on payments in full; and in the meantime, provisional certificates for the payments made will be delivered, jointly signed by Messrs Baring Brothers and Co., and Messrs Glyn, Mills, and Co.

Certificates of inscription will be delivered at the office of Messrs Glyn, Mills and Co. to such persons as may prefer stock inscribed in their names to bonds to bearer.

Bonds to bearer may at any time be transferred into inscriptions of stock in the name or names of those who may present them for that purpose; but inscriptions of stock cannot be converted into bonds. The bonds thus converted will be duly cancelled.

A sinking fund of one-half of 1 per cent. of the capital of the issue under the Act referred to in the annexed statement, with accumulating interest, will be applied to its gradual extinction, in the mode specified therein.

The provincial agents of Canada are prepared to receive in payment of this loan the Provincial Government 6 per Cent. Bonds payable in Canada, and the Consolidated Municipal Loan Fund Bonds, until 30*th June next* inclusive, on the conditions specified in the annexed statement; and also to carry into effect the exchange of the existing Sterling Bonds of Canada bearing 6 per cent. interest payable in London, as well as those bearing 5 per cent. interest, until 30*th June next* inclusive; issuing, until bonds or certificates of stock are prepared, provisional receipts for the same.

Together with this notice was published a long report from the Minister of Finance of Canada, explanatory of the position of the public debt, and of the objects sought to be attained by the present operation. We cannot find room for the latter document, which is by no means lucidly drawn up, but an abstract of its leading points may be useful.

The Provincial Parliament has authorised the Government to consolidate the existing debt into a new Canadian 5 per Cent. sterling stock, irredeemable until after 25 years from the 1st inst. In lieu of *stock*, the Government are also empowered to issue *bonds*, under precisely the same conditions, and convertible into stock.

At present the public debt of Canada is composed as follows:—

1. Imperial Guaranteed Loan, bearing 4 per cent. interest, and constituting a first charge on the Consolidated Revenue Fund (this stock is very rarely met with)	£1,100,000
2. Sterling Debentures, 5 per cent., payable in London	279,325
3. Sterling Debentures, 6 per cent., payable in London	7,223,600
4. Currency Debentures, 4½ per cent., payable in Canada	3,000
5. Currency Debentures, 5 per cent., payable in Canada	147,683
6. Currency Debentures, 6 per cent., payable in Canada	524,064
Total	£9,667,672

chargeable on the Consolidated Revenue Fund, and bearing an annual interest of 546,345*l*.

In addition to the above, the Province, as trustee for the Consolidated Municipal Loan Fund, and for other special funds, has issued debentures chargeable specially upon the security of those funds, and not upon the Consolidated Revenue, to the following amount:—

7. Sterling Debentures, chargeable on the Consolidated Municipal Loan Fund, payable in London, 6 per cent.	£200,000
8. Currency and Sterling Debentures, chargeable on the Consolidated Municipal Loan Fund, payable in Canada	1,720,160
9. Currency Debentures, 6 per cent., chargeable on minor special funds, payable in Canada	63,178
Total	£1,983,338

Bearing an annual interest of 119,000*l* sterling.

The two sums—9,667,672*l* and 1,983,338*l*—make the aggregate public debt of Canada, direct and indirect, 11,661,010*l*. The accumulated sinking fund for the redemption of the Imperial Guarantee Loan (No. 1), however, amounts already to 793,000*l*.

The subscription list to the new loan is to be closed on the 10th instant, but up to the 30th June next (the final instalment not being due until the 15th Jan., 1861) there will be received in liquidation of the instalments, in lieu of cash, Provincial Currency Bonds or Municipal Loan Fund Bonds, being the stocks numbered, respectively, 6, 7, 8 and 9, in the above statement of the debt. Were the whole of these bonds to be converted, they would cover nearly the whole of the new loan. A large amount, however, is fixed in one way or another, and will not be converted. For example, the Government themselves hold bonds—nearly all Currency Debentures—to the amount of 724'777*l* sterling, purchased on account of various "special funds." Again: By the terms of the charters granted to the provincial banks, they are required to hold as security for their issues Provincial Debentures to the extent of 10 per cent. of their capital. The amount so held is now about 500,000*l* sterling,

which is thus withdrawn from sale. Consequently, the amount of debentures which it is estimated may be paid in on account of the new loan is reduced to 1,250,000*l*. The manner in which the proceeds of the new loan of 2,800,000*l* are to be applied, therefore, stands thus:—

1. To pay up in full the sinking fund for the Imperial Guaranteed Loan, about 700,000*l*.

2. To reimburse the Consolidated Revenue Fund for advances made in 1859, on account of redemption of debt, 400,000*l*.

3. To redeem so much of the Feudal Tenure Fund, 250,000*l*.

4. For public buildings at Ottawa, 200,000*l*.

5. For redemption of remainder of 6 per Cent. Currency Debt, both direct and indirect, about 1,250,000*l*.—Total, 2,800,000*l*.

It will be observed that the addition to the public debt of Canada involved in this operation consists only of the 200,000*l* which is to be applied to public buildings at Ottawa, the future capital. The remaining 2,600,000*l* goes in reduction, in some form or other, of the existing debt. So far as the English money market is concerned, the transaction becomes a new loan of 2,800,000*l*, *less* the 1,250,000*l* of debentures, principally held here, which are to be accepted in lieu of cash. Viewed as a whole, the operation is a highly desirable one, for Canada will effect a large saving in the interest of her debt, and the position of her creditors will be materially simplified. The terms upon which the bonds described are to be accepted in payment of the new loan are stated as follows by the Minister of Finance:—

Until 30th June next, subscribers who are holders of Provisional Government 6 per Cent. Bonds payable in Canada, and having the direct engagement of the Consolidated Revenue Fund, will be permitted to pay their subscriptions to the new stock or bonds in these securities at par (viz., 1*l* 4s 4d currency for 1*l* sterling), adding one quarter per cent. premium for each year the bond may have to run. Thus, a bond having twenty years to mature will be taken at 105, payable in the new stock or bonds at par. Subscribers who are holders of Consolidated Municipal Loan Fund Bonds will be permitted to exchange them at par for the new stock or bonds—viz., 1*l* 4s 4d currency for 1*l* sterling.

The applications already sent in to the agents are believed to have reached 10,000,000*l* or 12,000,000*l*. A Consolidated Candian 5 per Cent. sterling stock or bond is a security highly calculated to attract the attention of *bona fide* investors, at a time when the current value of money is so low. The new loan has already been dealt in to some extent in the Stock Exchange, and was quoted this afternoon 2 to 2¼ per cent. per annum.

Thus far as regards the new loan of 2,800,000*l*. But, with a view to the consolidation of the entire debt of Canada, stock or bonds of the same character as that now offered may be accepted by the holders of the Sterling 5 and 6 per Cent. Bonds, payable in London (and numbered, respectively, 2 and 3 in the foregoing general statement of the debt). The terms upon which this further conversion may be effected are described as under by the Minister of Finance. There is no doubt that the option will be extensively accepted.

In order to facilitate the consolidation of the entire debt of the province, the Government are prepared to convert the Sterling Six per Cent. Bonds, payable in London, and carrying a direct charge upon the Consolidated Revenue Fund, into new stock or bonds of the same character as those now to be disposed of, and to be issued under the authority of the same act, at the following rates:—

£	s	d					
109	10	0	5 p. Ct. New Stock or Bds. for 100*l*,	6 p. Ct. Bds.	due Aug.,	1874
110	12	6	—	—	—	—	Sept., 1876
111	0	0	—	—	—	—	July, 1877
111	5	0	—	—	—	—	Jan., 1878
111	12	6	—	—	—	—	Jan., 1879
112	0	0	—	—	—	—	Jan., 1880
112	3	9	—	—	—	—	July, 1880
112	11	3	—	—	—	—	July, 1881
112	15	0	—	—	—	—	Jan., 1882
112	17	6	—	—	—	—	July, 1882
113	0	0	—	—	—	—	Jan., 1883
113	3	9	—	—	—	—	July, 1883
113	7	6	—	—	—	—	Jan., 1884
113	10	0	—	—	—	—	July, 1884

Holders of 5 per Cent. Sterling Bonds may convert at par. But neither class of such Sterling Bonds payable in London, can be received in payment of subscriptions to the new loan. The option of conversion is limited to the 30th June, 1860.

The prospectus of the Bank of Turkey, to the approach of which reference was made in the last number of the ECONOMIST, has been issued. The capital is to be 1,000,000*l*, in shares of 20*l*, or 22 medjidiés each, with power to increase to three millions, with the sanction of the Ottoman Government. The establishment is to have the right of issuing, to the extent of three times the amount of bullion in its coffers, bank notes, which shall be a legal tender at Constantinople and in all parts of the Sultan's dominions where the Bank may have branches or agencies. The shares command ¾ to ⅞ prem. In these points we embrace all that is to be said in favour of the undertaking, which meets with numerous and weighty objections. Amongst these are the following:—1. The direction is almost exclusively Greek and French, the former element largely predominating. 2. The seat of management is to be at Constantinople. 3. The governor, sub-governor, and two of the censors, are to be appointed by the Turkish Government, and the rest of the directors and censors by the concessionaires during the first three years of the Bank's existence. 4. The Bank is not to commence business until the entire capital shall be paid-up in full; and this payment in full must be effected within six months of the date of the delivery of the Imperial firman; whilst another stipulation is, that the commencement of business shall not take place until the whole of the paper money shall have been withdrawn. The latter preliminary the Government appear to be utterly unable to accomplish, unless, indeed, the Bank propose to lock up their own funds largely in the operation. Other objections there are, but the main one is that the direction does not command confidence here.

The prospectus of the City of London Brewery Company, Limited, has likewise appeared. This company is to carry on the extensive business of Messrs Calvert and Co., who, through signal imprudences, brought themselves to a stoppage some eighteen months ago. The creditors in the old concern continue their interest in the new one to the extent of 360,000*l*, but have consented to hold only a deferred rank. The capital now sought, and already partially obtained, is 240,000*l*, in 6 per cent. preference shares of 25*l* each, redeemable at the end of ten years, with 20 per cent. bonus. The proceeds will form the working capital. It results from the figures already rigorously tested by the accountants to the inspectors by whom the business has been carried on during the last eighteen months, that the net profits now exceed 50,000*l* per annum, being more than four times the sum required to meet the charge of the preference stock, and equal to a dividend of upwards of 8 per cent. per annum upon the whole capital of 600,000*l*. The preference capital will, therefore, in all probability, receive a considerable return beyond 6 per cent. Meanwhile, it forms a first charge, not only upon the profits, but upon the entire property of the undertaking, which is valued by independent authorities at 491,036*l*, and is made over to the new company for 450,000*l*. The project is very favourably regarded, and the preference shares were quoted this afternoon ⅝ to ¾ premium.

Brazilian railway shares have been unfavourably affected by a rumour that a scheme for the drainage of the city of Rio is about to be brought forward. This project, however, will not stand upon the same basis as the guaranteed railway shares. It is stated that an authoritative proposition will shortly be made for the capitalisation of a portion of the capital of the Brazilian railways into paid-up stock, leaving the non-capitalised shares alone liable for future calls.

San Paulo Railway shares are quoted ¼ to ⅜ dis.; Ocean Marine Insurance, 1⅛ to 1⅜ prem.; and Universal Marine, ⅛ dis. to par.

At Paris, to-day (Friday), the closing quotations of the Bourse were as follows, viz., 3 per Cent. Rentes, for money, 68.50; ditto, for account, 68.45; ditto 4½ per Cents., 96; Bank of France shares, 2,820. The 3 per Cents. show an improvement of ⅛ to ¼ per cent. since yesterday afternoon, but a fall of ¾ per cent., compared with the final quotations of last Friday. The extensive speculation for a rise which was entered into during the month of December has been followed by a severe relapse at the settlement just concluded, aggravated by the rumour that the expected Congress has been indefinitively postponed.

The variations in the English funds have been trifling. Consols closed this afternoon barely ⅛ per cent. lower than on last Friday, viz., at 95⅝, "sellers," ex div. for the 10th inst. Business has been very limited, but the market has derived support from the anticipation of the re-

investments which usually follow the payment of the dividends. The supply of stock in the market is but limited. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

	Consols, Money		Consols, Account		Exchequer Bills.

British railway stocks have again shown great buoyancy. Lancashire and Yorkshire has been in extraordinary favour, and has risen no less than 2¼ per cent., the prosperity of this line being regarded as assured by the activity of trade in the manufacturing districts. There has also been a fresh rise of 1 per cent. in South-Eastern stock, ¾ per cent. in Great Western, London and North-Western, and Midland, and ½ per cent. in London and South-Western. Eastern Counties, on the other hand, has declined ½ per cent. Generally the market is very strong, owing to the favourable traffic returns, and to the hope of improved dividends. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

	Railways. Closing prices last Friday.	Closing prices this day.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3⅝ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days sight is 109⅜ to 109½ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

LETTERS FOR THE ITALIAN STATES, SENT VIA BELGIUM.—Information has been received from the Prussian post-office that an alteration has taken place in the postage of letters, forwarded through Belgium and Prussia, from the United Kingdom to the several States of Italy. In future the following will be the rates of postage to which letters for the Italian States will be liable when specially directed to be sent "viâ Belgium," viz.:—

Country.	For a Letter— Not exceeding ½ an ounce	Above ½ an ounce, and not exceeding 1 ounce.	Above 1 ounce, and not exceeding 2 ounces.	Every ounce after the first.
	s d	s d	s d	s d
Sardinia, Parma, Modena, Tuscany	1 2	2 4	4 8	2 4
Papal States	1 4	2 8	5 4	2 8
Two Sicilies	1 6	3 0	6 0	3 0

Letters for Sardinia, Parma, Modena, and Tuscany by the above route may be posted either paid or unpaid at the option of the senders. But the postage of letters addressed to the Papal States and the Two Sicilies, by the same route, must, in all cases, *be prepaid*. Registered Letters.—Letters for Sardinia, Parma, Modena, and Tuscany, sent viâ Belgium, may be registered if the senders desire it, and they will be liable to a registration fee of—British, 6d; foreign, 7d—total, 1s 1d, in addition to the ordinary postage. Letters for the Papal States and the Two Sicilies sent by way of Belgium cannot be registered.

GRAIN IMPORTED.

An Account of the total quantities of each kind of corn, distinguishing foreign and colonial, imported into the principal ports of Great Britain, viz.:—London, Liverpool, Hull, Newcastle, Bristol, Gloucester, Plymouth, Leith, Glasgow, Dundee, and Perth. In the week ending December 28, 1859.

	Wheat and wheat flour.	Barley and barley-meal.	Oats and oatmeal.	Rye and ryemeal.	Peas and peameal.	Beans & beanmeal.	Indian corn and Indian meal	Buckwheat & buckwht meal.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

A very limited supply of English wheat was on offer at Mark lane, to-day, in very middling condition. For good and fine samples, the demand ruled steady, at fully Monday's prices; but other kinds were a dull inquiry. Foreign wheat and fine barley were quite as dear as last week. In other articles very little was doing, at previous currencies. The imports from abroad, this week, have been trifling, viz., 1,870 quarters of wheat, 2,940 barley, 7,500 oats, 40 sacks and 1,260 barrels of flour.

At Liverpool, this morning, wheat sold at extreme rates, but other articles were neglected.

In five days (to which the business in the Liverpool cotton market has this week again been limited) the transactions have amounted to 67,000 bales, including 36,500 bales to spinners, 19,000 to speculators, and 11,500 bales for export. Quotations remain without any alteration. To-day the market closes steady: sales, 8,000 bales at previous rates. The business done this week is on an extensive scale, but as large is the stock offering, and so willing are some holders to realise, that notwithstanding its extent prices have been barely maintained, excepting for the better descriptions, of which the choice is less abundant. There

is all prospect of a free accumulation of stock in Liverpool, so large are the shipments coming forward, and the receipts in America continue to increase considerably.

The following statistics show the import, consumption, &c., of cotton in great Britain in the year 1859:—

	bales.
Imported into Great Britain in 1859	2,828,900
Exported from — —	437,050
Net import	2,391,850
Stock in Great Britain, December 31, 1858 ...	371,980
Nett import, as above.....	2,391,850
	2,763,830
Stock in the kingdom, December 31, 1859 ...	469,520
Taken for consumption in 1859	2,294,310

or, 44,121 bales weekly.

Against 41,820 in 1858	Against 37,834 in 1854

We have to report a steady inquiry for most kinds of tea, the prices of which have been freely supported.

Although within the last day or two the trade has been far from active, raw sugar has improved in value 1s per cwt, and there has been a good demand for refined goods on rather higher terms.

"The course of the sugar market during the past year," observe Messrs Trueman and Rouse, "has, on the whole, been one of great evenness, for although there have been temporary fluctuations in price, the extreme quotations have not shown a difference of more than 4s per cwt, and are now, in most instances, on a par with those of 1st January, 1859. The consumption of cane sugar has been comparatively but little interfered with by beetroot, which finds little favour with our refiners generally, and several of those who have used it will only do so again at such a difference in price as may compensate for the injury which they consider the character of their goods sustains by its introduction. There is, however, no doubt that in other European countries the reverse is the case; beetroot sugar is gradually superseding that of tropical production, and this change would be still more decided in the event of much advance in the price of the latter. The estimates which were put forth in the early months of the year, as to the probable out-turn of the crops, have been pretty well borne out by the results, and the imports during the past twelve months have but little exceeded those of 1858. Turning to the future, there seems at present no reason to look for greater supplies than the demand will take off; from no tropical producing countries do the reports warrant the expectation of larger crops, except Cuba and perhaps the British West Indies, but any increase from these two sources will be required to make up for the deficiency in Louisiana; from nearly every source supplies are reported to be very late, and there can be no doubt that, for some time to come, the imports will in consequence be very light."

Privately, as well as at public sale, coffee has changed hands freely, at very full prices to a slight advance, and the show of samples is only moderate.

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Eleven Months ending 30th November, 1858 and 1859.

Cocoa has commanded more attention, at extreme rates.

The rice market has been tolerably active. In prices, however, no actual advance has taken place. An improved business has been passing in most kinds of fruits.

Messrs Powell and Co. have published their annual circular in reference to the leather trade. As regards the importation of hides, they intimate

The trade has been sound and healthy, the demand legitimate, not speculative, and no heavy stocks are left on hand. It is obvious that, with the excessive importation of South American and Australian hides, and, we believe, a considerable addition also to the home slaughter, the tanners must have more leather in process than last year, making even a liberal allowance for a deficiency in the import of other goods, and for the increased exportation (representing probably 100,000 hides); but we are of opinion that there is not more leather in the hands of manufacturers than will be required to meet the increased and increasing consumption of the country and of its dependencies, in their present prosperous state.

Messrs Churchill and Sim have issued the comparative statement of the stock of timber, deals, staves, &c., at the public docks in London, at the close of the following years:—

	1857.	1858.	1859.
FOREIGN.

Staves .....mille	1,139	995	950

Both hemp and flax have met a very inactive inquiry; nevertheless, holders, generally, have shown no disposition to accept lower rates.

The silk market may be considered in a healthy state; but we have very little change to notice in prices.

Messrs Grant, Hodgson, and Co. remark as follows in reference to the tobacco trade:—

With an apparent disinclination on the part of the trade to purchase beyond their immediate requirements, the result of last month's business unexpectedly presents sales of 1,383 hhds, viz., 429 hhds Virginia leaf, 116 hhds and tierces Virginia strips, 266 Kentucky leaf, 468 strips, and 104 hhds Maryland. The principal sales have consisted of good and fine descriptions, to which buyers have chiefly directed their attention. An indisposition has been exhibited, in some instances, against purchasing beyond immediate requirements, in consequence of the extent of the present year's importation and amount of stock, compared with the corresponding period of last year. It may, however, be observed that the imports of Virginia, Kentucky, and Maryland for the last year sum up 13,990 hhds, which, compared with the previous year, shows an increase of only 929 hhds. This increase is created by the large arrivals of export leaf, amounting to 2,400 hhds, and taking the stock of this class of tobacco, of the import of 1858, and previous importations remaining in the warehouses, it will be seen that the available stock of home-trade tobacco is about 14,500 hhds. Of nearly all descriptions, other than American, the decrease in stock is extremely large. In taking a retrospective view of the market, since the corresponding period of last year, especially as respects prices, there was no material alteration esta-

blished until reliable information was received relative to the prospects of the growing crop, and which being considered favourable, lower rates were submitted to, and subsequently established a decline in some descriptions of nearly 2d per lb. There has been more inquiry for exportation, and sales made of upwards of 60 hhds, chiefly of fine quality. About 90 hhds were taken for the navy. Latest accounts from New Orleans represent a very quiet market. Imports, 706 hhds. Deliveries, 999 hhds, against 976 hhds in the corresponding month of last year. Stock, 18,890 hhds against 14,601 hhds in 1859, 10,316 hhds in 1858, 11,101 hhds in 1857, 10,041 hhds in 1856, and 11,384 hhds in 1855.

Scotch pig iron has moved off slowly, at 57s 6d and 57s cash, mixed numbers. Copper has advanced 5*l* per ton. Tough cake is now worth 117*l*, and best selected 120*l* per ton. Several contracts have been entered into to deliver spelter in the spring at 21*l* 15s to 22*l* 2s 6d per ton.

Messrs Edwards, Eastty, and Co., have issued the annexed statement in reference to the movements of linseed in 1859:—

In granary we have about 35,000 quarters, namely, 11,500 Black Sea, 1,000 St Petersburg, and 22,500 East India, beside which about 20,000 quarters have been lately reported, but are not yet discharged from import ships. At Hull, there are 55,000 quarters, and there is said to be 45,000 quarters in crushers' hands, including what is afloat in the port. At Liverpool, about 20,000 quarters are held by importers. Off the coast, there are 40,000 quarters ordered, but not yet arrived at their destinations, and in addition 185,000 quarters expected within the ensuing three months, 70,000 quarters of which are Black Sea, 86,000 quarters Calcutta, and 29,000 quarters Bombay, or in all about 100,000 quarters less than at the same time last year. The import into London is again greatly in excess, and stock being only about the same as last January, whilst the export has been considerably less, proves that the consumption drawn from this district must have been nearly double that of the previous year. Subjoined are the respective annual official returns of the aggregate imports into the United Kingdom:—1841, 363,461 quarters; 1842, 367,700; 1843, 470,539; 1844, 616,947; 1845, 656,793; 1846, 506,141; 1847, 439,512; 1848, 799,650; 1849, 626,495; 1850, 608,984; 1851, 630,471; 1852, 799,402; 1853, 1,035,335; 1854, 828,513; 1855, 756,950; 1856, 1,180,179; 1857, 1,051,113; 1858, 1,017,844; 1859, about 1,250,000. To this port the East Indies last year supplied nearly 350,000 quarters, the Black Sea about 35,000 quarters, and the remainder was made up of cotchels from the Baltic, Archangel, Alexandria, &c. The direct re-export from England amounts only to about 90,000 quarters, against 150,000 quarters in 1858, and 30,000 quarters in 1857. The aggregate into the United Kingdom is made up of about 300,000 quarters from Bombay, 250,000 quarters from Calcutta, 135,000 quarters from St Petersburg, 41,000 quarters from Archangel, 90,000 quarters from Riga (including 21,000 quarters sowing seed), 40,000 quarters Lower Baltic ports, and remainder made up of Alexandrian and other Mediterranean ports and sundries.

"During the year the public contracts for coals," write Messrs Seymour, Peacock, and Co., "have been far below the actual supplies—excess in shipments under contracts or private arrangements having made up the deficiency. The contracts with the Peninsular and Oriental Company, Government, and Indian Council, consisted of the following quantities:—

	tons.		tons.
Aden	20,000	Halifax	500
Bombay	6,000	Alexandria	6,000
Galle	2,000	Sierra Leone	4,000
Trincomalee	5,500	Fernando Po	3,800
Bermuda	2,000	Gambia	400
Malta	25,000	St Paul de Loando	2,000
Madras	7,000	Jamaica	8,000
Kurrachee	2,000	Gibraltar	3,500
Ascension	6,500		
Sinoua Bay	5,000	Total	109,500

The actual consumption of English coal in India and China is about 325,000 tons per annum; in addition to which, about 35,000 tons has been exported to China by the English and French Governments during the autumn, in consequence of the war, precipitated by the transactions at the mouth of the river Peiho. The consumption at the Cape of Good Hope is about 25,000 tons per annum. The Egyptian Government imports into Alexandria about 36,000 tons per annum."

Linseed oil sold at 27*l* 10s, with a moderate inquiry. Other oils have changed hands slowly, at barely late rates.

The tallow market has ruled firm, and P.Y.C. on the spot has sold at 57s 9d to 58s per cwt. The latest advices from St Petersburg are to the effect that very little business was passing for spring shipment.

Other articles of produce have ruled about stationary.

We extract the following statistics, having reference to shipping from the annual circular of Messrs Laming and Co.:—

Table showing the tonnage of sailing vessels built in the United Kingdom:—

1855.	1856.	1857.	1858.
242,182	187,005	197,554	154,930

Table showing the tonnage of steam vessels of the United Kingdom employed in the home and foreign trade:—

Years.	Tonnage.
1856	331,055
1857	381,363
1858	369,204

Tonnage of sailing and steam vessels registered:—

	Sailing Vessels.	Steam Vessels.
1850	119,111	14,584
1858	154,930	53,150

The following table is appended as showing the total steam tonnage of the United Kingdom in the several years from 1850 to 1858, both inclusive:—

Years.	Number of Steam Vessels.	Net Tonnage.
1850	1,181	167,398
1851	1,218	185,366
1852	1,263	207,989
1853	1,375	248,623
1854	1,513	304,559
1855	1,664	379,020
1856	1,687	385,038
1857	1,813	416,132
1858	1,916	451,047

"The market for all kinds of cotton goods of domestic manufacture," observes the New York *Shipping List* of the 27th ult., "has been dull, but without leading to any material concession on the part of holders of desirable fabrics, though there is noticeable a softening in rates of less desirable goods, which have accumulated. There is no change worthy of note, the transactions having been limited to the City trade. Shipments during the week have been heavier than for a long time, however, which betokens a continued healthy export movement, and for such goods as are most required for shipment, the market continues buoyant and holders firm, at full rates. Foreign goods are quiet, without alteration in prices."

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has not been quite so much animation in the demand, but importers generally have continued firm, and the advance of 1s per cwt paid during the holidays was fully maintained up to yesterday, while some parcels of foreign muscovado, offered by auction, were held for a further rise. West India is very firm, owing to the indifferent supply. 632 casks, in public sale, about two-thirds sold: Barbadoes, middling to good, 39s 6d to 44s; brown and low yellow, 36s to 39s; Tobago, 36s 6d to 40s; crystallised Demerara, 42s to 47s; brown and low soft grey, 38s to 39s 6d. The deliveries, as usual in the Christmas week, were moderate, but the stock is reduced to 57,000 tons, against 53,600 tons last year.

Mauritius.—A limited business has been done by private contract, chiefly in the lower qualities, at previous rates.

Bengal.—1,239 bags ware partly sold at 41s to 43s for good soft middling to fine yellow Gurpatta date; soft brown and yellow sorts bought in at 33s to 38s 6d per cwt.

Madras.—5,065 bags Jaggery were bought in at 30s to 30s 6d, and were partly sold at 29s to 30s; washed, 29s to 29s 6d. 5,828 bags grocery, good rather soft to fine grainy yellow, 44s to 47s per cwt.

Penang.—1,531 bags sold at 35s to 38s per cwt for brown and yellow.

Foreign.—131 boxes white Cuba sold at 32s 6d to 33s in bond. 376 boxes, duty paid, fine yellow and florettes, 46s to 48s 6d. 415 casks Porto Rico and 614 casks Cuba were bought in above the value. A floating cargo of new Pernambuco has sold at 26s; and a cargo of 600 tons Java, equal to No. 12, at 30s 6d per cwt.

Refined.—The market has been steady. Common dry goods quoted at 51s 6d to 52s; crushed, 49s to 51s 6d; pieces, 42s to 48s per cwt. There is a moderate supply, and fine qualities of the latter are scarce.

MOLASSES.—A steady business has been done, the sales amounting to nearly 300 puncheons West India at 15s to 16s 6d per cwt for common to good quality.

RUM.—There is no change in the market this week. Jamaica has been in steady demand. The Government contract is stated to have been taken last week at 1s 10½d to 1s 11d per proof gallon.

COCOA is firmer, and there has been more inquiry for West India by private contract.

COFFEE.—Several arrivals of Ceylon have taken place, but the market remains firm, and 262 casks 456 barrels and bags plantation brought forward yesterday: fine ordinary small berry to middling, 67s 6d to 73s 6d; good middling to good, 75s to 81s 6d. 383 bags good ordinary native sold at 59s to 59s 6d per cwt. No further transactions of importance have occurred privately.

TEA.—Moderate purchases have been made by the dealers, and the market is firm: common congou quoted 1s 3¼d per lb. No further sales are at present declared for the ensuing week.

RICE.—The demand has been active, and at rather higher prices. On the spot rather a large business is reported: Arracan, 9s 6d to 9s 9d; Rangoon, 7s 3d to 9s 6d; Moulmein, 9s 6d; white Bengal, 10s to 13s 4½d; pinky Madras, 9s 6d to 10s. A floating cargo of Madras has sold at 9s 6d for Liverpool, the quality not guaranteed; and a floating cargo of Necrancie Arracan at 10s 6d for the Continent. 6,614 bags Java, by auction, were about two-thirds sold at 10s 6d to 12s 6d for low broken to middling white; a small part sold at 11s. 1,530 bags Bengal were taken in above the value.

SALTPETRE remains firm at the recent advance established. 1,700 bags Bengal in course of landing have sold at 41s to 42s; and about 2,000 bags on the spot since last Friday: refraction 11½ to 3¾, 37s 6d to 41s 6d. At auction, 858 bags partly met with purchasers: refraction, 4½, 41s 6d; 9 to 8¼, 38s per cwt.

NITRATE OF SODA is in steady demand at 15s 6d. A floating cargo has sold, said to be at about 6d per cwt less.

DYEWOODS.—Logwood is in active demand. A cargo of 400 tons St Domingo has been sold at 5*l* per ton.

METALS.—There has not been quite so much animation in the market Foreign copper is higher, and English has advanced ½d per lb. Scotch pig iron has receded in value, closing yesterday at 57s per ton for mixed numbers. A few contracts have been made in spelter at 22*l* to 22*l* 2s 6d

for Spring shipment. The stock on the 1st inst. was 4,300 tons, or 200 tons less than at same date in 1859. Foreign tin is inactive: Banca quoted 140s: Straits, 134s to 135s per cwt.

HEMP.—A parcel of common Manilla has sold at 21*l* 10s per ton with short prompt, and the demand is still inactive. The total stock in London on the 1st inst. was 27,000 tons, against 18,100, and 13,800 tons in the two preceding years. Petersburg clean is quoted 28*l* to 28*l* 5s per ton.

JUTE has been more inquired after by private contract.

IMPORTS and DELIVERIES of JUTE during the last four years, with STOCKS on hand at the close.

	1859. tons	1858. tons	1857. tons	1856. tons
Imports	27200	19000	8640	19700
Deliveries	21540	15600	10500	19950
Stock	12850	7500	4130	5880

OILS have not experienced any material change in prices.

TALLOW.—There has been very little alteration in the prices of foreign this week, and the market is now steady. 1st sort Petersburg Y. C., 57s 9d to 58s; for delivery to March, the same; last three months of the year, 52s 6d per cwt.

PARTICULARS OF TALLOW.—Monday, January 2.

	1857 casks.	1858 casks.	1859 casks.	1860 casks.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market is firm but quiet. 17,400 bags Mauritius, 1,540 bags Bengal, 10,643 bags Madras, were mostly bought in. 2,200 bags Penang sold at 35s 6d to 41s for brown and yellow. The sales of West India for the week have amounted to 2,160 casks.

COFFEE.—330 casks 86 barrels 700 bags plantation Ceylon sold at barely previous rates. 800 bags native ordinary to good, 59s to 61s 6d.

RICE is very firm. 11,000 bags by auction to-day partly sold: Necrancie Arracan, 9s 6d; white Bengal, 9s to 10s 6d.

SAGO.—1,100 boxes sold: medium to fine small grain, 17s to 20s 6d.

SPICES.—800 bags Singapore black pepper sold steadily at 4⅞d to 4¼d. 13 cases nutmegs and 12 cases mace realised the former value. 597 bags African ginger sold at 36s to 37s 6d per cwt.

SALTPETRE.—300 bags sold privately at former rates.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar have been very quiet this week. Common lumps, 51s 6d. In Holland, crushed sugar continues firm.

GREEN FRUIT.—The demand continues of an extensive character, mild weather assisting consumption. Several cargoes of oranges from St Michael, Terceira, Seville, and Valencia, sold by Keeling and Hunt at public sale, went at prices somewhat lower than were realised before Christmas. The price of black Spanish being reduced has improved the sale. Lemons without alteration. Confectioners are taking a quantity off the market.

DRY FRUIT.—There is every symptom of a healthy trade for some time to come; stocks not excessive, and demand good to meet a large consumption.

ENGLISH WOOL.—The market is rather quiet, and prices remain unchanged.

FLAX.—Not any change.

HEMP.—At auction, to-day, 75 tons good clean hemp bought in at 28*l* 5s; market steady thereat. A large business recently done at St Petersburg, and at full rates.

COTTON.—Sales of cotton wool from Friday, 30th December, 1859, to Thursday, 5th January, 1860, inclusive:—300 bales Surat, at 4⅞d for good fair Oomrawattee; and 5⅛d for good fair Dhollera. Last week there were no reported sales. This week a better feeling has decidedly prevailed in this market, and offers have been made for quantity, but owing to the firmness of holders of the better qualities of Surat, which are now becoming scarce, the transactions have been limited; prices, however, are rather higher. 480 bales Surat are advertised for public sale on Thursday, the 12th instant.

TOBACCO.—The market has presented no change; good and fine home trade descriptions have been chiefly inquired after, and of which a few limited sales were effected at present quotations.

METALS.—More activity has been visible during this week, and in some things a good business has been done. Copper advanced ½d per lb on sheets, and 5*l* per ton on unmanufactured, on the 5th inst., at which the market is very firm, and even buoyant. Iron is without change of consequence, but appearances are more favourable. Lead is still quiet. Spelter also quiet, but in good favour. Tin—English is scarce, and foreign firm at quotations. Tin plates in good demand.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	59	6
Fat by ditto	3	1½
Yellow Russian	59	6
Melted stuff	41	6
Rough ditto	25	0
Greaves	15	0
Good dregs	7	0

Imports this week 1,175 casks.

METROPOLITAN CATTLE MARKET.

THURSDAY, Jan. 5.—About an average supply of beasts was on offer in our market to-day. All prime breeds moved off steadily at fully Monday's currency; otherwise the beef trade was inactive; nevertheless prices were well supported. We have to report a good demand for sheep of prime quality at extreme rates. Longwools were inactive, but not cheaper. The supply on offer was rather limited. Prime calves were scarce and in request, at very full prices; but inferior qualities of veal ruled somewhat heavy.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	8	Prime Southdown sheep	5	2	5	6
Second quality ditto	3	10	4	4	Large coarse calves	4	2	4	8
Prime large oxen	4	6	4	8	Prime small ditto	4	10	5	2
Prime Scots, &c.	4	10	5	0	Large hogs	3	6	3	10
Coarse and inferior sheep	3	6	4	0	Small porkers	4	0	4	10
Second quality ditto	4	2	4	6	Suckling calves...each	22	0	23	0
Prime coarse-woolled do.	4	8	4	10	Quarter old store pigs	23	0	29	0

Total supply—Beasts, 1,100; sheep, 4,500; calves, 122; pigs, 360.
Foreign supply—Beasts, 120; sheep, 480; calves, 82.

NEWGATE AND LEADENHALL.

FRIDAY, Jan. 6.—Prime beef, mutton, veal and pork—the supplies of which are limited—command a steady sale, at very full prices; otherwise, the trade is in a sluggish state, at about previous rates.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	8	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	3	8	4	4	Small pork	4	4	4	8

HOP MARKET.

BOROUGH, Monday, Jan. 2.—The operations on our market, during the past week, have been somewhat limited, owing to the period of the year, and the scarcity of fine samples. In the few sales effected, recent rates have been fully supported. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 63s, 76s, 86s; Sussex, 60s, 68s, 76s.

FRIDAY, Jan. 6.—The market continues active at late quotations.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Jan. 2.—During the past week the arrivals coastwise have been light, owing to contrary winds; but there have been considerable supplies by rail. The following are this day's quotations:—York Regents, 90s to 130s; Lincolnshire ditto, 80s to 100s; Dunbar ditto, 100s to 115s; Kent and Essex, 70s to 100s; Perth, Forfar, and Fifeshire ditto, 70s to 100s; Rocks and Reds, 65s to 75s; French whites, 60s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, Jan. 5.—There has been no material increase in the arrivals of home produce, coastwise or by rail, since our last report. Trade is still rather active, in consequence of the short supplies. York Regents, from 130s to 140s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 110s; ditto Cups, 80s to 90s; Dunbars, 120s to 130s; and French, 80s to 90s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. A steady demand.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 4*l* 4s; clover, 3*l* 10s to 5*l* 5s; and straw, 1*l* 4s to 1*l* 10s per load. Trade firm.

CUMBERLAND.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. Supply moderate, and trade firm.

COAL MARKET.

FRIDAY, Jan. 6.—South Kelloe 19s—Heugh Hall 17s 6d—Whitworth 16s—South Durham 17s 6d—Wall's-end Braddyll's Hetton 19s—Walls-end Gordon 16s—Belmont 17s 6d—Tanfield Moor Butes 14s 9d. 13 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 6.—The year has opened with a very good demand for all useful descriptions of foreign wool, but for want of stock, the transactions have been of no great extent. Prices continue to be very firm.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 6.—Wheat in moderate request at full quotations. Flour dull and neglected. Beans 6d cheaper. Indian corn inactive. Oats, oatmeal, and barley only in retail demand.

METALS

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 6.—The market, for both Staffordshire and Welsh manufactured iron, remains firm, with a fair demand. In Scotch pig iron there has been, this week, a pause in the speculative movement that lately existed, and prices have slightly receded. Copper, which has for some time maintained great firmness, has been again advanced in price, to the extent of ½d per lb on manufactured, and 5*l* per ton on tile and cake copper. Most other metals are without change.

The Gazette.

TUESDAY, Jan. 3.

BANKRUPTS.

J. Tilley, St Andrew's road, Horsemonger lane, Southwark, licensed victualler.
G. Batters, Hatcham, Surrey, etarch manufacturer.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending December 24 amounted to 498,300*l*, and for the corresponding week of 1858 to 454,350*l*, showing an increase of 43,950*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 223,964*l*, and for the corresponding week of last year to 207,301*l*, showing an increase of 16,663*l*.

CALEDONIAN, EDINBURGH AND GLASGOW, AND SCOTTISH CENTRAL.—In consequence of the proposed amalgamation of these companies, it has been resolved by the committees of the Edinburgh Town Council, Merchant Company, and Chamber of Commerce, assembled in conference, that the most determined opposition ought to be given to the proposed bill for the amalgamation of the Caledonian, Edinburgh and Glasgow, and Scottish Central Railway Companies. They have agreed to recommend their respective constituents accordingly, to communicate with the trades interested with the rates of carriage, and to form a fund for meeting the expenses of the proposed opposition. The Town Council of Perth have by 16 to 10 resolved to petition Parliament against the bill, and various other public bodies are taking preliminary steps to oppose it.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Jan. 2.—In the railway market to-day the general business was not large; but as regards home and colonial descriptions a good demand prevailed, while foreign showed increased heaviness. Grand Trunk of Canada again improved 1 per cent., and Indian guaranteed railways were generally firmer. Atlantic and St Lawrence, on the other hand, partially relapsed, and Canadian Great Western remain without recovery at 12½ to ¾. The principal depression in foreign descriptions was in French and Lombardo-Venetian in response to the fall on the Paris Bourse. Mines were dull, but generally steady. No alteration occurred in joint stock banks.

TUESDAY, Jan. 3.—In the railway market there was again a good demand for British and colonial stocks, especially Indian guaranteed, which continued to improve on purchases for investment. As regards home descriptions there are few sellers, as the period approaches for the half-yearly dividends, and generally more confidence is shown respecting the prospective value of this class of securities. In several cases a fresh advance has taken place of ⅛ to ¼ per cent. No change of importance occurred in American railway securities. The new Victoria Government debentures left off ¼ per cent. higher. Mines continue firm, with little doing. Joint stock banks were generally steady, but Ottoman were dull. In miscellaneous descriptions a further rise took place in Canada Land.

WEDNESDAY, Jan. 4.—The principal demand to-day was for Lancashire and Yorkshire and South-Eastern, both of which were about ½ per cent. higher. Midland and Great Northern also improved. There is rather a better tone in the foreign market; but not much real recovery. Bahia and the new San Paulo left off ¼ discount to par. In American railways the shares of the Illinois Central declined 1 dol. The prices of mines were, on the whole, fairly maintained, although in one or two instances there was a less favourable tendency.

THURSDAY, Jan. 5.—The railway market was dull at the commencement of business, but afterwards rallied, and closed generally with a firm appearance. In colonial railways, Indian guaranteed continued in demand and firm. East Indian left off steadily at 104 to ½, and Grand Trunk of Canada 43¾ to 44¼. French shares and Lombardo-Venetian were again flat. Bahia and San Paulo remained at ¼ discount to par. In American securities there was a decline in the shares of the New York Central. The changes in mines were rather numerous, the most important being a further rise in St John del Rey. Joint stock banks show no material variation. In miscellaneous descriptions another advance took place in Madras Irrigation. Ocean Marine Insurance were last quoted at 1¼ to ⅜ premium, and Universal Marine ¼ discount to par.

FRIDAY, Jan. 6.—A limited amount of business was done in the railway share market; prices, however, were steady, and in one or two instances slightly improved. Foreign undertakings were flat. In the colonial market no material variation took place. East Indian, Grand Trunk of Canada, and Great Western of Canada realised former prices; Great Indian Peninsula improved about 5s.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S, &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: JohnChurchill; and may be had of al booksellers.

CHRISTMAS TOILETTE

REQUISITE and NEW YEAR'S GIFT.—Among the many articles of luxury and value purchasable at this season, none can be obtained possessing the manifold advantages of OLDRIDGE'S BALM of COLUMBIA. It nourishes the roots and body of the hair, imparts the most delightful coolness, with an agreeable fragrance of perfume. And at this period of the year prevents the hair from falling off, or if already too thin or turning grey, will stop its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or carl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and monstache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

AN ACT OF GRATITUDE.—20,000 Copies of a Medical Book for gratuitous circulation.—A Nervous Sufferer, having been effectually cured of nervous debility, loss of memory, dimness of sight, lassitude, and indigestion, resulting from the early errors of youth, by following the instructions given in a Medical Work, he considers it his duty, in gratitude to the author, and for the benefit of others, to publish the means used. He will, therefore, send free, secure from observation, on receipt of a directed envelope, and two stamps to prepay postage, a copy of the book, containing every information required. "Every young man should peruse this excellent little work, if he values his health, happiness, and peace of mind."—BRITISH CRITIC. Address, James Wallace, Esq, Wilford house, Burton crescent, Tavistock square, London, W.C.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

SELF-CURE.—AMERICAN TREATMENT.

TO NERVOUS SUFFERERS.—GIVEN AWAY.

"THE GUIDE TO SELF-CURE."

By C. T. RAPKEY, Esq., Registered M.R.C.S., and Consulting Surgeon to the Metropolitan Medical Institute, &c.

"The first man of the day in these complaints."—MEDICAL REVIEW, July, 1856. "The true guide to those who desire a speedy and private cure."—UNIVERSITY MAGAZINE. "The 'NEW AMERICAN DISCOVERY' demonstrates the absurdity of the English Mode of treating such complaints, will prove a blessing to the afflicted, who may safely and easily regain pristine health by adopting the means prescribed."—EVENING SUN.

Sent free on receipt of four stamps (merely charged to defray postage, &c.) by Dr Rapkey, No. 27 Alfred place, Bedford square, London, W.C.

TO THE NERVOUS AND DEBILITATED.

MR CURTIS, AUTHOR OF THE Medical Treatise "MANHOOD," may be consulted as usual, either by letter or personally, at his residence, 15 ALBEMARLE STREET, PICCADILLY, LONDON. The efficacy and harmless nature of the remedies employed by MR CURTIS, having been demonstrated by the most complete success during a practice extending over a period of 20 years, nervous sufferers of every class, including those afflicted with want of energy, loss of memory, pains in the back, self-distrust, functional incapacity or debility, have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

At home for consultation daily, from Ten till Three, and Six till Eight. Sundays from Ten till One.

REVIEWS OF THE WORK.

"CURTIS ON MANHOOD.—This is a truly valuable work, and should be in the hands of young and old."—SUNDAY TIMES, 23rd March, 1856.

"It is the duty of all men to study the laws of their body, no less than those of their mind. In the pages of this work will be found golden rules for regulating the one and preserving the other."—MARK LANE EXPRESS, March 31, 1856.

"The author has conferred a great boon by publishing this little work, in which is described the source of those diseases which produce decline in youth, or more frequently premature old age."—DAILY TELEGRAPH, March 27th, 1856.

"The book under review is one calculated to warn and instruct the erring, without imparting one idea that can vitiate the mind not already tutored by the vices of which it treats."—NAVAL AND MILITARY GAZETTE, 1st Feb., 1856.

An enlarged edition of the above work has just been published, and may be had of Piper and Co., 23 Paternoster row; and all booksellers. Price One Shilling, or free by post, in a sealed envelope, from the Author for 14 stamps.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility, Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION,

which will be sent free in a sealed envelope, by Mann, 39 Cornhill, London, or by the Author, to any address, for eight stamps.

CONTENTS

SECTION I.—The Physiology of the Generative Organs.

SECTION II.—Puberty—Manhood—The Morals of Generative Physiology—True and False Morality.

SECTION III.—Marriage in its Moral, Social, and Physical Relations—Its Expectancies and Disappointments—Advantages of Physical contrasts in securing Healthy offspring.

SECTION IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-Inflicted miseries.

SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.

SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice,

RAIL PAID TO ANY STATION IN ENGLAND.

VERY CHOICE MARSALA OR BRONTE WINE.

THOMAS NUNN and SONS have great pleasure in bringing this excellent yet economical Wine to the notice of their customers; the approvals of it continue numerous and most flattering; it is of the highest quality well matured and full-bodied, and so thoroughly clean tasted that it will go on improving for years to come; and has this advantage over Sherry, that it may be taken by the most delicate person without causing acidity in the stomach. Their selections have been made with so much care, that they have no hesitation in saying the most perfect satisfaction will accrue to every purchaser.

30s per doz. £3 14s per 6 doz. £15 10s per ¼-cask.

From THOMAS NUNN and SONS, Wine, Spirit, and Liqueur Merchants, (upwards of 43 Years Purveyors o the Honourable Society of Lincoln's Inn,) 21 Lamb's Conduit street, Founding Hospital.

*** A Priced List of every kind of Wine, Spirit, and Liqueur sent on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

ATTIRE FOR THE SEASON.—

LAWRENCE HYAM has to announce his preparations for the Autumn and Winter. Gentlemen will now find his stock of Garments for immediate wear complete in every department. The productions of the various manufacturers exceed, in variety of design and material, all those of former years.

LAWRENCE HYAM'S OVERCOATS,

of the latest fashion, comprising the Inverness Cape, the Albert, the Clarendon, the Sac, &c., are made from the most suitable materials, and in the strongest manner. 21s. 30s, 42s, 50s.

LAWRENCE HYAM'S

Walking, Dress, and Surtout Coats,—sound in material and make, exact in fit, and fashionably designed and finished.—Surtout and Dress Coats, 26s to 60s. Walking Coats, from 14s to 35s.

LAWRENCE HYAM'S VESTS

in Cloth, Silk, Satins, Tweeds, &c., either for ordinary wear or dress purposes, faultless in design and material, varying in price from 4s 6d to 21s.

LAWRENCE HYAM'S TROUSERS,

celebrated for their true and comfortable fit, made of the strongest and newest fabrics.—Prices, 10s 6d, 12s, 14s 6d, 17s, 21s.

City Establishment, 36 Gracechurch street; West-end Establishment, 189 and 190 Tottenham court road

ECONOMY AND EXCELLENCE.—

E. MOSES and SON, Merchant Tailors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules for self-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—

LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).

COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT,

made of various materials, in all colours and shapes, and particularly adapted to walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained only of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

GOOD NEWS FOR SMOKERS.—

NO PUFFING REQUIRED.—Buy the new Patent MEERSCHAUM DUST BILLIARD PIPE, the most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. "Man wants but little here below," but that little must be the most perfect short pipe that can be got, and it only CAN be got, with all its rapidly colouring advantages, at the "Waterloo" Tobacco and Pipe Establishment, 193 Waterloo bridge road.—Sample pipe in case sent post free for 28 stamps.—EDWARD PILLINER, Patentee.

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

OILS, SOAPS, AND CANDLES.—

The original Depôt for LILLE COLZA OIL of the purest importation, 4s 6d per gallon, in any quantity. Household Yellow Soaps, 36s, 40s, 44s, 46s and 48s per cwt. The most durable Soaps in the trade. Store Dip Candles, 7½d per lb. Wax-wick Moulds, 8½d per lb. Price's Composites, 8d, 9d, 10d, and 11d per lb. Lists free on application. Town deliveries daily per own carts.

WHITMORE and CRADDOCK
16 Bishopsgate street within, E.C., London.
Five pounds worth of goods railway free.

S. W. SILVER AND CO.,

OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuineness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES:
ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C.

HOLLOWAY'S OINTMENT AND

PILLS.—Ulcers, Wounds, Sprains, Bad Legs, and old Wounds, whether recent or chronic, yield with surprising celerity to the cooling, healing, and curative properties of this invaluable Ointment. It may be relied upon in all such cases as have baffled the skill of our best hospital surgeons; no matter the length of time the malady has endured, the Ointment, assisted by a course of Holloway's Pills, will quietly but certainly reach the core of the complaint and thoroughly eradicate it, without additional impediments to pleasure or business. These remedies will overcome the worst forms of disease and the foulest state of the blood; while in glandular swellings, scurvy, and all diseases of the skin, they are equally irresistible.

TEETH.—BY HER MAJESTY'S

ROYAL LETTERS PATENT.—Newly-invented and Patented Application of Chemically-prepared

INDIA RUBBER

in the Construction of Artificial Teeth, Gums, and Palates.

MR EPHRAIM MOSELY,
SURGEON DENTIST,
9 Grosvenor street, Grosvenor square,

Sole Inventor and Patentee.—A new, original, and invaluable invention consisting in the adaptation, with the most absolute perfection and success, of chemically-prepared

INDIA RUBBER

in lieu of the ordinary gold or bone frame. The extraordinary results of this application may be briefly noted in a few of their most prominent features:—All sharp edges are avoided; no springs, wires, or fastenings are required; a greatly increased freedom of suction is supplied: a natural elasticity hitherto wholly unattainable, and a fit perfected with the most unerring accuracy, are secured; while, from the softness and flexibility of the agent employed, the greatest support is given to the adjoining teeth when loose, or rendered tender by the absorption of the gums. The acids of the mouth exert no agency on the chemically-prepared India Rubber, and, as a non-conductor, fluids of any temperature may with thorough comfort be imbibed and retained in the mouth, all unpleasantness of smell or taste being at the same time wholly provided against by the peculiar nature of its preparation. Teeth filled with gold and Mr Ephraim Mosely's White Enamel, the only stopping that will not become discoloured, and particularly recommended for the front teeth.

9 Grosvenor street, Grosvenor square, London; 14 Gay street, Bath; and 10 Eldon square, Newcastle-on-Tyne

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES'

ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

DR KAHN'S MAGNIFICENT

ANATOMICAL MUSEUM, top of the Haymarket (acknowledged by the whole of the Press to be the most useful and instructive of any in existence), is open daily for Gentlemen only, from 12 till 5, and from 7 till 10. Admission One Shilling. Descriptive handbooks gratis. Dr Kahn's Popular Lectures on the "Philosophy of Marriage," daily at 3 and 8 o'clock precisely. Syllabus—Happy and Unhappy Unions, and their causes—Youthful Vices and Indiscretions, and their results—Disqualifications for Marriage, and their cure—the Physiology of Reproduction—Self-inflicted Miseries—Sterility and it causes—How to Secure Moral and Physical Happiness.

N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the author, 7 Harley treet, Cavendish square, W

Just published, 1 vol. 8vo, with numerous Anatomical Plates, post free, on receipt of 12 stamps,

VITA VITALIS:

A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternost row; and all booksellers in town or country.

FENDERS, STOVES, FIRE-IRONS, and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED,—The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3¾-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair: larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

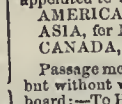
33 and 34 Ludgate hill, London, E.C.

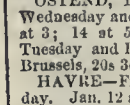
DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London Bridge."



LEA AND PERRINS' WORCESTERSHIRE SAUCE is universally acknowledged to be the most valuable condiment, and experience has proved its efficacy in promoting digestion and preserving health. Sold by Barclay and Sons, Crosse and Blackwell, and the principal dealers everywhere.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."
6 Edwards street, Portman square, London.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Rennion, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.



NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—
AMERICA, for BOSTON, Saturday, January 14.
ASIA, for NEW YORK direct, Saturday, January 21.
CANADA, for BOSTON, Saturday, January 28.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.
For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; or D. and C. M'Iver, Water street, Liverpool.

*** IMPROVED ACCOMMODATION FOR PASSENGERS LANDING AND EMBARKING AT ST KATHARINE'S WHARF.—An additional and separate entrance, leading direct to and from the steamers alongside the wharf, with waiting-rooms attached, has been provided for the use of passengers only, by which all confusion and inconvenience arising from the goods traffic is avoided.

SOLICITOR.

Francis Elkington, Esquire, Birmingham; and 7 Chancery lane, London.

The objects of the Company are, to carry on the business of Hop Merchants, Warehouse Keepers, Maltsters, and Coopers; to supply the Colonies of New South Wales, Van Dieman's Land, New Zealand, and other markets, with Hops, Malt, London Porter, Stout, and Burton Ales. To accomplish these objects, the Directors have contracted for the purchase of the Victoria Stores Estate, London, and the business of the proprietor in connection therewith; also the Crescent Brewery, at Burton-upon-Trent, for brewing and securing regular supplies of Burton Ales, and the several premises attached to the brewery for establishing requisite maltings and cooperage for use of the brewery; also have arranged for regular supplies of the best Export London Porter and Stout of the most esteemed brand; and for securing the perfect management of the Company's business, have adopted the principle of payments to the managing staff by a per centage only on the amount of dividends payable from time to time to the shareholders.

From the foregoing arrangements, and the facilities the several properties afford to conduct to best account the business of the Company, the advantage of water communication in transit of goods, the great value of the estates, and the immediate benefit of the possession of the proprietors' old and established business; the Directors have confidence in considerable prosperity in the undertaking and satisfactory returns to the shareholders.

Application for Prospectus and Shares to be addressed to Mr John Spong, Secretary, Victoria Stores, London, E.

FORM OF APPLICATION FOR SHARES.

To the Directors of the London and Colonial Company, Limited.

Gentlemen,—I will thank you to allot me shares of Class* , and shares of Class* in the above Company, and I agree to accept the same, or any less number; also to pay the full amount of such share on allotment, and if of Class B, the premium of £2 per share thereon.

Name (in full) .....
Profession or Occupation .....
Residence (in full) .....
Place of Business (if any) .....
Date .....
Usual Signature .....

* Please insert Class A or B as desired respectively.

A limited number only of shares will be at present allotted.

Class A shares will be issued at par.

Class B shares will be issued at £2 per share premium.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

ALLEN'S PATENT

PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks, Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling, illustrated in his new Catalogue for 1859. By post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand.

TOBACCO PLANTATIONS, &c.,

in the district of Ambalema, New Granada.

For SALE in Bogotá, capital of New Granada, on or before the 1st October proximo, the following Valuable Properties, either jointly or separately:—

The Estate called "La Union," situated on the river Lagunilla, within 15 miles of the town of Ambalema, and containing about 8,000 acres, of which over 2,000 acres are under cultivation, producing large crops of tobacco of the finest description,—about 1,400 acres are planted in guinea grass,—and in natural pasture 3,000 acres maintaining near 2,000 head of cattle, the annual produce of which is fattened on the guinea grass pastures, and sold on the land to the tenants. The buildings on the estate are of the most solid description, and have every convenience for the curing and storing of the tobacco. In addition to the above, there is on the estate a large Sugar Mill, recently constructed, with iron waterwheel, copper boilers, and two stills of 350 gallons each. All the buildings attached to the cane establishment are of the most solid description, and the canes of most luxuriant growth, and rich in saccharine matter.

The valuable Estate on the banks of the Magdalena river, between Honda and Ambalema, called "Mendez," with a large receiving house, extensive tobacco plantations and guinea grass pastures, capable of fattening over 500 head of cattle each season. The greater part of the village of Mendez belongs to the Company, and its inhabitants consume a considerable part of the cattle fattened on the estate.

Extensive and excellent Tobacco Lands in Narino, in the district of Ambalema, with receiving house and grazing grounds for cattle, which latter meets with a ready sale in the same district.

The capacious and solid Factory in Ambalema, built by the Government at an enormous expense, when the tobacco trade was still a monopoly, with store and packing rooms, presses, and all the necessary appliances for curing and preparing tobacco for the English and continental markets.

Debts due to the Company by tobacco growers on their own lands and elsewhere, &c., &c.

Large sums have been laid out by the proprietors in putting the lands into the best condition for bearing abundant crops, and though the Company derives a large supply of tobacco from the said lands, this supply can be and is further increased by purchases in Ambalema from growers in the vicinity. In fact, the business is in a most satisfactory state, and all the considerable outlays incurred by the proprietors during many years are bearing fruit now.

The population on the lands, already very numerous, is daily increasing, and an abundant supply of labour can therefore at all times be counted on.

The present owners have determined to part with the above properties, or part thereof, because some of them are desirous of leaving the country, and because their contract expires on the 1st October proxime. For the former reason, they are ready to accept more moderate terms than they would have been disposed under different circumstances, and to let a portion of the purchase money remain standing, by way of mortgage on the properties, at a moderate interest.

Parties wishing to buy the whole or part of the above properties, may possibly be able to make arrangements with some of the members of the present Company for the reorganisation of the said Company on the terms of the present contract or others, in which case they would have the benefit of the experience acquired by them during the many years that they have been engaged in the tobacco business.

For particulars apply in England to

Messrs Santamaria and Co., 7 Commercial buildings, Water street, Liverpool;

Messrs Stiebel Brothers, 8 Crosby square, London; and to Messrs Schloss Brothers, 7 Jeffrey's square, London, and 71 George street, Manchester.

Proposals to be made through either of the houses named to Messrs Schloss and Co., D. Castello and Sons, and Don Raimundo Santamaria, Bogotá.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London, and at 2 Goree Piazzas, Liverpool.

The Political Economist.

THE COMMERCIAL NEGOTIATION WITH FRANCE.

THE public were somewhat startled on Thursday by an announcement in the *Morning Post*, "that negotiations were "at this moment on foot, having for their object the conclu- "sion of a treaty between France and England on the broad "basis of mutual advantage." We believe we may say with confidence that the information of our contemporary is substantially correct, and that negotiations of a business-like character are at present in progress with the object stated.

The first reflection which we must all feel at such an announcement is a gratifying one. It is most gratifying to know that the Emperor considers himself able to make an important move in the direction of free trade. His personal sentiments have long been well known; and it is very satisfactory that we now feel that he can act upon them. There can be no doubt that the negotiations must be of this character, as far as France is concerned, not merely because Mr Cobden is said,—we believe with truth,—to have in some degree intervened in them, but from the nature of the case itself. The only "advantage" which France can offer us is to take our commodities on better terms. The only boon she can give us is to modify her highly-protective tariff in some degree, and with respect to some commodities or other. And as we are all Free-traders, we must be much rejoiced to hear that she is inclined to do so.

We must, however, be understood to reserve our judgment as to other parts of this proposed treaty until it is itself before us. Commercial treaties are difficult bargains. England will be expected to give "an equivalent" for the steps made by France in the direction of free trade, and this is not so easy a matter. *We* have no longer any protective duties to relinquish, and we have not therefore an equivalent to give to France *of the same nature* with the boon she offers us. Our imports with France are principally articles of a very luxurious character, and the duties we impose on them are revenue duties, which are productive to the Exchequer, which do not press upon the poor, and which are liable to almost as little objection as any Customs duties which we have. We shall be asked to relinquish some of these to obtain from France a relaxation of her protective system. We do not say or imply that this should not be done, but we are sure that the negotiation is a delicate one, that it well deserves the most careful consideration which can be bestowed on it, and that we would not wish to give an opinion on its details until they shall be more matured.

THE HOLY FATHER AND HIS DEVOTED SON.

MATTERS in Italy seem to be approaching a crisis. Last week Count Walewski retired from the Ministry of Foreign Affairs because his notorious legitimate tendencies were irreconcileable with the opinions and designs of his august Master. This week we are presented with a singular interchange of sentiments between the Emperor and the Pope, which is full of character,—and, save in one point, ominous of good. The language of the Holy Father is undignified in the extreme: that of "his devoted Son," as Louis Napoleon subscribes himself, is straightforward even to the verge of cynicism. The Pope, after answering a New Year's address from the French troops in Rome and their Commander, General Goyon, and pronouncing his blessing upon them, proceeds in this strange fashion to express his hope that the Emperor will have the grace to disavow the obnoxious pamphlet, "*Le Pape et le Congrès*," of which we have lately heard so much:—

"In prostrating ourselves at the feet of that God who "was and is and will be to all eternity, we beseech Him in "the humility of our heart to shed down grace and light "so abundantly upon the august Chief of the French army "and nation, that.....he may yet recognise the *falsity of* "*certain principles lately put forth in a little pamphlet* (dans "un opuscule) which may be called a strange specimen of "hypocrisy and a tissue of unworthy contradictions. We "hope and believe that by the aid of this enlightenment he "will condemn the principles contained in this *opuscule!*"

Surely, since the description of the pious hawkers of Constantinople who incessantly perambulate her streets, exclaiming, "In the name of the Prophet——*figs!*"—no such sample of opening solemnity and concluding bathos was ever given to the world. The "art of sinking" could go no further. Neither its solemnity nor its bathos, however, seems to have touched the obdurate heart of the "august "Chief";—for, on Wednesday, the Emperor publishes in the *Moniteur* a letter recently addressed by him to the Pope, and calculated to throw considerable light both on the past and on the future. After recounting all that he has done for the Papacy, and explaining that a desire to prevent the revolutionary movement from extending to the Papal States was one of his principal motives for concluding the unsatisfactory peace of Villafranca, he tells His Holiness, in plain French, that he has only himself to thank for the loss of the Romagna, that it *is* lost, and that he had better, like a mere layman, swallow the bitter pill, and make the best of a bad job. It appears that immediately after peace was signed with Austria, he wrote to the Pope urging him to grant at once a lay governor and a separate administration to the Legations,—a measure which he, Louis Napoleon, believes might then have preserved them from revolt. His Holiness, however, seems to have peremptorily declined to act on the suggestion:—revolt and independence ensued; and the Emperor, while fully admitting that the Great Powers will recognise *in the abstract* "the incontestable claims" of the Pope to the possession of the revolted provinces, tells him at the same time that the recognition will be utterly fruitless and unmeaning,—inasmuch as he cannot recover them by his own strength, and will not be allowed to call in the strength of others. He then adds, with a coolness of manner and a profoundness of conviction which are unspeakably refreshing, that, "much meditating "on these things," he has come, however sadly and reluctantly,

to the conclusion that the Pope's wisest and safest course will be to abandon the revolted provinces at once. "If (he "adds) the Holy Father, for the sake of the peace of Europe, "should give up these provinces which for fifty years have "been a source of embarrassment to his Government, *and* "*if, in exchange, he should request the Great Powers to gua-* "*rantee to him the possession of the remainder*, I do not doubt "the immediate restoration of tranquillity. Thus, the Holy "Father would ensure to grateful Italy peace for many years, "and *to the Holy See the peaceful possession of the States* "*of the Church.*"

We desire particularly to call the attention of our readers to the passages which we have printed in italics; for they point to a source of possible error and of danger, which it is important to signalise at once;—more especially as rumours are abroad, having their origin apparently in Paris, that France and England are agreed as to the general principles on which a settlement of Italy is to be effected,—or at least proposed to the other Powers, if the Congress should ever meet.

It is difficult to over-estimate the enormous gain which would be secured to Italy were a strong Central State, at once independent and constitutional, formed in that Peninsula and recognised by the Great Powers of Europe. The immediate advantage would be even less important than the future prospects which such an establishment would open. For such an object we would pay a heavy price, endure many sacrifices, and run considerable risks. We think we would almost waive—though with extreme reluctance—the condition of immediate annexation to Piedmont. We would certainly—though also with extreme reluctance—consent to the retention of Venetia by Austria, satisfied that such retention could be only temporary. We would consent to let Sicily and Naples, great as their sufferings are, lie over for other operations and other chances. Indeed there is only one price which we would *not* pay for the establishment of a State which should embrace the whole of Central Italy from the Gulf of Genoa to the Gulf of Ancona;—and *that price is exactly the condition which Louis Napoleon suggests that the Holy Father should exact for the surrender of Romagna,—viz.*, the guarantee by the Great Powers of Europe of his remaining possessions. Under no circumstances, and for no consideration upon earth, must England be a party to such a guarantee. To guarantee to the Pope even the City of Rome would be bad enough; but to guarantee to him the whole of his Mediterranean provinces would be simply monstrous. In the first place, we have no right to secure to any Potentate in the world the rule over subjects who detest him and wish to throw him off. To do so would be to make ourselves supporters of his tyranny and participators in his crimes. Surely we have had enough of this in Oude. Surely also, we should fancy, the French have had enough of it in Rome. If once this unseemly and immoral bargain were entered into, the Powers who were a party to it would be simply the tools and *sbirri* of the Ruler whose throne they had so guaranteed. They would be under the necessity of upholding his most shameful oppressions. He might govern worse and might exasperate more than any Sovereign before ever ventured to do; for the wretched subjects who might oppose or rise up against him would be put down and kept down by the irresistible might of combined Europe. It would be useless to remonstrate with him, to suggest reforms, to recommend mercy, to counsel justice: he would mock at all such suggestions, and would meet them with the unanswerable reply: "You promised to support "me: you *guaranteed* me my possessions, and I hold you to "that guarantee." In a word, the Pope, under such a guarantee, would treat all representations as he has treated those that Louis Napoleon has repeatedly addressed to him since 1849, with silence and a sneer.

Let there be no doubt or obscurity for one moment as to the sentiments of this country on any such conditional settlement as that suggested in the Emperor's letter. France may do what she pleases. She may withdraw her troops from Rome and leave Pio Nono to his fate. She may bargain to preserve to him a part of his territory as a price for the surrender of the rest. Louis Napoleon may, or may not, be inclined to push matters to extremity with the Holy Father:—the retirement of the Duke de Grammont looks like the former probability;—but whatever be *his* bargain, if it involves a promise to maintain by force one reluctant Italian under Papal rule, England can be no party to any such contract. Her principle and her conduct are alike clear and open: NO INTERVENTION, *whether joint or separate, between Sovereigns and subjects.*

We must also add, that we think the Emperor rather tries the patience of his allies by the frequent changes of his plans. We can hardly in this slow and business-like country follow their variations or comprehend their rapidity. We cannot tell from what he says to-day what he will say to-morrow: possibly he cannot tell himself. Perhaps he changes as other men change. But he must pay the penalty. This country can make no vague or inexplicit or ambiguous engagements with a man whose *published* views are so variable. Vague agreements are always dangerous, but they are doubly so with a man who starts so often out of course, who is so little bound by common rules, and who, if he knows his mind himself, takes care that no one else shall.

A FRENCH ECONOMIST ON ADAM SMITH.

THE *Revue des Deux Mondes* of Dec. 15 contains a lucid and appreciative article on Adam Smith, from the pen of M. Leonce de Lavergne, which will not fail to interest a large number of readers, both in England and France. It is remarkable in more respects than one. The judgment of the ablest organ of educated and enlightened French opinion on the character and doctrines of one of the greatest of British thinkers must have value and attraction for most of us, both as economists and as politicians; and it is satisfactory to find how fully and justly the eminent services rendered, not to England alone, but to Europe and the world, by the author of the "Wealth of Nations," are recognised and acknowledged by intelligent Frenchmen. If the comparison drawn at the outset between M. Turgot and Adam Smith seem to betray a pardonable degree of national jealousy in respect to the first authorship of a science of which France has furnished many of the best subsequent exponents, yet substantial justice is done to the "Scottish philosopher" as the earliest author of a complete and connected system of doctrine in economical science, and the guide and teacher of those who, following in his footsteps, have advanced that important branch of knowledge to the point it has now reached. Especial notice and commendation are awarded to those qualities of his mind and his system which are peculiarly British; to the sobriety of his style, the cautious moderation of his statements, and the essentially practical disposition which effectually secured him against all danger of pushing abstract truths into concrete extravagances; a danger from which, as the Reviewer seems to indicate, the economists of France have not always been so well guarded. Adam Smith was the last man to overlook the necessity which attaches to all "applied" science, and to political economy perhaps most of all, of making due allowance for friction; recognising and calculating upon those disturbing influences, of whatever nature, which render the general laws of science liable to modification whenever applied to practical uses or tested by practical instances. And this practical turn of mind, though it sometimes involved an undue deference to prejudge, and left Smith's doctrines liable to extension and correction by subsequent economists, is justly regarded by the Reviewer as one of the causes which assisted to win for the "Wealth of Nations" the attention of statesmen and men of business, and to obtain for political economy that unrecognised authority and general acceptance in England which it has failed as yet to command in France. It is strange at first sight that our speculative neighbours, with their decided partiality for scientific precision and abstract theory, should have proved less willing than ourselves to listen to doctrines which tend to reduce to systematic form and rule an important department of human affairs. The difference may not unfairly be ascribed, as in the article before us, to the fact that average Englishmen are attracted towards economical truths by the form of moderation and practical sense which in the hands of English economists they always assume; average Frenchmen are repelled from them, despite their scientific garb, by the wild extravagances associated with them by certain economical heretics. In a word, the most radical side of political economy is represented to us by Bentham and Mill, to Frenchmen by Cabet and Louis Blanc. This being the case, it is less surprising that in France "political economy has never been able to get rid of its

merely sectarian character": it is still the creed of *savans*, not part and parcel of the unconscious education and belief of the people. It is true that in England the name of political economy is unpopular, its character often misconstrued, and its doctrines controverted by ignorant or impatient writers and speakers. But, nevertheless, the chief principles laid down by Adam Smith have taken deep root in the national mind, have exercised an increasing control over the legislation of the last half-century, and are now almost to be reckoned among the axioms on which our polity is founded. In France, this is as yet far from being the case; and unsoundness on these subjects, which is *here* confined to a few exceptional points of practice, or to men notoriously prejudiced and wrongheaded, seems to be the rule both with the Government, the agriculturists, and the mercantile and manufacturing classes *there*.

It is his exposure of this contrast which gives its chief value to M. de Lavergne's article. Perhaps he makes it somewhat stronger than it really is, attributing to England more advancement in economical knowledge, and a more thorough grasp of the principles of political science, than her statesmen have really displayed. There is no doubt, however, that the practical politicians of France are sadly behindhand as compared with ourselves, even perhaps as compared with other nations. It is not yet fourteen years since we abandoned protection; but then we had been relaxing its bonds for some twenty years previous, and France seems still to cling to it as strongly as ever. For a longer space of time our national aversion to the system of loans has exercised a growing control over the administrators of the national revenues, and it now compels them, under any but the most extraordinary circumstances, to meet the year's expenditure with means raised within the year. But France has not only taken a different course, but has commenced within the last ten years a practice of reckless borrowing which must in no long time seriously affect her resources. To these causes M. de Lavergne traces the difference of the progress made by the two countries in material prosperity; the facts that the British population has increased its comfort while it has rapidly multiplied its numbers—France meantime being stationary in both respects; that the French agriculture is one of the most backward of Western Europe, and that France has fewer miles of railroad in proportion to her area than Belgium, Prussia, or Germany, and only one-third as many as Great Britain. That she has made any progress at all is, in his view, owing to the large advances made since the age of Adam Smith towards free trade; the abolition of internal restrictions on trade, which "protected" the industry of one province against the competition of another; and the admission of many important articles of foreign growth, notably materials for the manufactures of wool, cotton, and silk,—the imports of each of which he states, in round numbers, at 150,000,000f (6,000,000*l*) yearly. Were protection in France still what it was in Voltaire's day, she could not be what she is now; were it as completely abolished as in England, she might,—such is the inference obviously intended,—ere long rival England in prosperity.

The tone in which M. de Lavergne speaks of England is deserving of notice; as it represents fairly enough what we believe to be the true feeling of a very important if not very numerous class of Frenchmen; those moderate and thoughtful leaders of Liberal opinion who, if now excluded from political action, are yet the chiefs of the world of literature and intellect in France. A melancholy and respectful envy appears to be their sentiment towards England; an envy unmingled with hostility or petty jealousy, directed not towards our wealth but our institutions, and mingled with what seems to us almost exaggerated appreciation of the peculiar qualities which have enabled us as a nation to enjoy at once a stable government and an unrivalled degree of personal and political freedom. It is satisfactory to know that, whatever our relations with France, whatever may be the temporary policy of her rulers or passions of her populace, this is the light in which we are regarded by those Frenchmen whom Englishmen are most inclined to respect,—those whose character and conduct indicate them as the only party capable of securing for their country the nearest attainable approximation to the political felicity of England. We do not, as we have often avowed, venture to indulge high hopes of the future of constitutional freedom in France; but if the country which has produced and sustains the *Revue des Deux Mondes* be unfit for liberal institutions, it is assuredly not for want of men fitted to conduct a constitutional administration or adorn a constitutional legislature. Nothing could be more judicious and dignified than the steady courage and prudence with which, in the present season of adversity, they have not "despaired of the Commonwealth," but persistently pleaded the cause of social and commercial progress, and availed themselves of the liberty left them to do what is in their power to ameliorate a Government bad by origin, nature, and necessity: and nothing could give us more hope for France than the attitude thus assumed by some of the ablest and noblest of her Liberal Statesmen under a *régime* which excludes them from all other means of serving her.

SCANDALOUS CAUSES AND PRIVATE HEARINGS.

While, under the authority of Lord Campbell's Act, the police are able to take measures for the repression of scandalous exhibitions in the windows of generally frequented thoroughfares, and do occasionally interfere to destroy unclean publications or obnoxious prints when thrust before the eyes of respectable men and women in their daily walks, a kind of outrage on public decency of another and not less serious kind has grown into most unpleasant prominence. We speak of those filthy stories which it is often the painful duty of our Courts of Law to bring to light and to investigate; and which, owing to the publicity which is an essential part of our judicial system, are not confined to the ears of those whose professional office it is to deal with them, and who may be thought casehardened by habit to the polluting influence, but are related generally before a crowded audience, and too frequently published at full length for the edification of a very considerable proportion of the general public. The evil is undeniably a great one. From the method in which these details of indecency are brought to notice, as part of the regular business of an institution so interesting and so much respected as an English Court of Justice, they are likely to receive more attention, and to do more in depraving popular feeling and morality, than prints which, exposed to public gaze in a shop-window, expose the gazer also to the notice and contempt of respectable passers by, or disgusting books, which can only be read by stealth, and which no one could bear to read whose taste was not already corrupted so far that they can do him but little additional injury. These latter nuisances are very properly made punishable, not so much for the mischief they do to those who buy or study them, as for the insult and pain inflicted by their public exhibition on those who do neither. What course ought to be adopted with the nuisance of indecent cases in the Law Courts? Such is the question which has occurred, no doubt, to a good many minds during the last few months especially, and which has already been formally mooted by one or two of our contemporaries.

The proceedings of the Divorce Court, in particular, have been made the subject of animadversion on this score; and some complainants seem disposed to speak as if this Court were the only one in which matters unfit for the public eye are frequently revealed and discussed. The mistake is not unnatural; but it is a mistake. Rarely a week, never a month, passes which does not witness before Police Magistrates, or before the Central Criminal Court, proceedings as bad as those over which Sir Cresswell Cresswell is forced to preside. But in the Divorce Court the greater portion of the cases tried are of this description; and some of them possess, apart from their disgusting details, a degree of general interest which does not attach to similar trials in other Courts. They are more read, and very much more talked about. Besides this, the Court is a new one, and has in the first few months of its existence been compelled to deal with the accumulated "matrimonial causes" of several years, with all their scandalous revelations and abominable details. In consequence it has appeared hitherto in an unfavourable light, dealing with an Augean stable of moral filth, formerly closed to general observation, and compelled to do its dirty and disagreeable work in the light of day, under the eyes of the whole country, to every adult individual wherein the manner in which that work is done is felt to be a matter of vital consequence. It is no wonder, therefore, that it should be offensive, a scandal, and a nuisance; that

those who on moral grounds opposed its creation, preferring to leave the stable closed and uncleansed, should point to the hateful sight of the cleansing process in justification of their former opposition; and that those who believe the process necessary, should inquire whether the doors might not as well be kept shut while it goes on.

There is generally a good reason for every time-honoured usage which has grown up into a rule of national or legislative action; and the custom of judicial publicity—the immemorial practice which requires the Judges habitually to sit in open Court, under the observation of their countrymen—is no exception to the general principle. True, they assume, and occasionally exercise, the right of ordering the Court to be cleared, especially when any disposition towards disrespect or disorder is manifested by the audience; and it is no doubt necessary that they should retain, and on occasion use, such a power. But the publicity of their proceedings is of immense importance, not only as a check on professional bias, political or religious partisanship, or a pedantic adherence to technical rules in disregard of substantial justice—all of which are faults of which honest and able judges are capable, and to which their previous career and education gives them an unconscious tendency—but also as a means of instructing the people generally in the actual state of the law, of which they really do in this manner acquire some sort of knowledge. Now the check of public opinion is perhaps more imperatively required in the Divorce Court than in any other, the law under which it acts being as yet new and imperfectly settled, and a very wide scope being necessarily left in its interpretation to the personal bias and individual opinions of a single Judge. No man is free from such individual peculiarities of view as would, if unchecked by supervision from without, make the law administered by him in any judicial function too much a reflection of those peculiarities, and too little in accordance with the general judgment of mankind; and we mean no disrespect to the very excellent Judge who presides in the Court in question in assuming that he, like his brethren, will decide the better for deciding in public. It is also of the highest importance that the general public should understand the practical working of the new matrimonial law; and this they can only do by watching the proceedings and decisions given in open Court. Even if cases of which the details are "utterly unfit for publica-" tion" were alone heard in private, yet as these necessarily constitute the great bulk of the cases tried, the result of such a practice would be to make the Court of Matrimonial Causes a secret tribunal; an institution alien to the political instincts and deliberate judgment of England, and which for that reason, if for no other, could not possibly work well.

There is a further objection to private hearings in the actual experience of the Divorce Court as it stands. It seems evident that there is great danger of collusion even at present; that parties are willing, when thoroughly uncomfortable in wedded life, to arrange matters in such fashion as to give ground for a suit which must almost be considered amicable in order to gratify their common desire for liberty. The Court, too, seems naturally to lean to a too favourable construction in such cases, and to indulge somewhat too readily the unhappy recalcitrants in their wish to be rid of one another. We do not say that this is so, but it seems to be so. At present the publicity given to the case, and the disgrace thereby inflicted on both parties, is a powerful check on malpractices:—would that check continue to be felt with equal force if, at the pleasure of the parties, the Judge could hear their case with closed doors? Those who are not prepared to say that it would, must admit that this alone constitutes a serious drawback on any advantage to public morals that could possibly be expected from the discontinuance of a daily exhibition of scandal. Unless we are prepared to alter fundamentally the conditions of marriage as laid down by our law; unless we are to allow divorce by mutual consent on compliance with certain forms—in other words, to abolish marriage, as English men and women understand it, utterly and entirely,—we are bound in providing for its dissolution under extreme circumstances to guard stringently against the possibility of collusion. It would be far better for public morality to allow married couples to divorce themselves by a formal act at pleasure, than to make it possible for them, by a perversion of the law, to obtain the same end by a deliberate compliance with the conditions imposed by the present Court of Divorce. And we believe that one of the principal restraints on such a perversion of law is the publicity given to their disgrace by the existing method of procedure.

Nor do we think much of the effect produced by such revelations on the characters of those who go to hear them in Sir C. Cresswell's Court. Those—if such there be—who frequent that Court for pleasure or amusement, must be past the stage of life and feeling in which their morals can be considered to require protection from without; and no one but lawyers and officials are under any obligation to be present during such trials as those of which we speak; for the witnesses are, or should be, kept out of Court till it is their turn to give evidence. The mischief that is done, is done by the publication in newspapers—which find access to respectable families—of details which ought not to be heard beyond the precincts of the Court; and the prominence given by some journals of standing to cases which, if not indecent, are offensive and disgusting. The offence committed in this case is that of thrusting objectionable narratives before those who do not, and would not, seek them; throwing them in the way of women and children. It is analagous to the offence which Lord Campbell's Act was intended to punish; and the practical remedy required is the same—the removal of the disgusting publications from the sight of respectable people. The application of the remedy in the case of his own family is in every man's hands. Let the cheap newspapers which are the great sinners in this respect—which publish in several columns what the *Times* or the *Daily News* compress into a few scarcely objectionable lines—be excluded from every decent household, as strictly as are publications avowedly immoral. If those among the penny papers which violate the canons of decency are treated on the same footing as those low periodicals of another kind which a gentleman would be ashamed to be detected in reading, and would on no account admit into his house, the requisite punishment will have been administered, and the necessary protection of domestic purity accomplished. More than this we need not desire. Those who care to seek out and paddle in the moral sewerage of society need not be hindered from their pastime; all we need wish to do is to prevent the filth from being thrust upon those who abhor it.

THE RESOURCES OF CANADA.

At the present moment, when Canadian securities are so much discussed, the following table will have great interest. It shows in a very remarkable manner the rapid development of Canada and the great resources which it possesses:—

Statement of the Value of Goods imported into Canada, with the amount of duty collected thereon, from the year 1841 to 30th September, 1859, inclusive; also, the Value of Free Goods imported during the same time.

Year.	Imports. £ s d	Duty. £ s d	Free Goods. £ s d
1841.....	2,694,160 14 6	225,834 7 10	146,268 17 8
1842.....	2,588,632 13 2	278,930 7 4	85,944 2 4
1843.....	2,421,306 16 4	241,572 9 0	13,526 18 0
1844.....	4,331,050 17 4	441,331 15 2	83,666 10 4
1845.....	4,191,325 16 6	449,960 1 7	59,061 17 4
1846.....	4,515,821 1 11	422,215 16 8	61,300 10 8
1847.....	3,609,692 14 11	414,633 5 6	*77,139 5 4
1848.....	3,191,328 5 10	334,029 8 9	92,978 0 0
	27,543,319 0 6	2,808,597 11 10	619,886 1 8

It should be remembered that the above figures being pub-

lished officially by the Canadian Government, are in the Canadian *currency*.

THE PRESIDENT OF THE MANCHESTER CHAMBER OF COMMERCE ON THE PRESENT RULES OF MARITIME WARFARE.

We recommend to the attention of our readers an excellent letter from Mr Potter, the President of the Chamber of Commerce at Manchester, to the members for that city, on the defects of the present rules of maritime warfare. It gives a very lucid explanation of the points that ought to be considered at the forthcoming Congress, and is well deserving of a very careful perusal:—

Manchester Chamber of Commerce, January, 1860.

Gentlemen,—On the occasion of this Chamber presenting to Lord Palmerston a memorial on International Maritime Law (a copy of which I enclose), I beg, on behalf of the Board of Directors, to draw your attention to the proposition formally made to all the Maritime Powers by the Government of the United States in July, 1856, namely:—

"That the private property of subjects and citizens of a belligerent on the high seas shall be exempt from seizure by the public armed vessels of the other belligerents, except it be contraband."

Also to President Pierce's Message to the Congress of the United States in December, 1856, stating on the subject of the same proposition, that

"The Emperor of Russia has entirely and explicitly approved of that proposition, and will co-operate in endeavouring to obtain the assent of other Powers": and that

"Assurances of a similar purport have been received in relation to the disposition of the Emperor of the French."

Also to certain resolutions adopted at a meeting of citizens in Bremen, and to others passed by the Chamber of Commerce at Hamburg, in favour of the adoption of the American proposition. These are by no means unimportant, inasmuch as they may be taken to indicate the opinions which are probably entertained on this question in other parts of Germany.

We cannot doubt that you will regard as both inhuman and impolitic the present state of Maritime International Law, which subjects the property at sea of unoffending individuals to be seized or destroyed, and the sailors and passengers of unarmed ships to be made prisoners of war; and we venture to hope that you will use your utmost influence to induce our Government to accept any feasible proposition which may be made at Paris, or elsewhere, with a view to introducing into that law the change suggested by the Government of the United States.

We are well aware that many of our countrymen, relying upon the great and daily increasing power of our navy, may at first sight regard such an alteration as a concession to our European neighbours; but it may be hoped that this country, which has so often urged upon other Governments the moderate use of their power, will no longer support a code of morality on the ocean so strikingly barbarous and unjust.

And, moreover, we believe it will be found that, in common with the rest of Europe, this country would derive so many advantages from the proposed change, as to justify its support by Great Britain, even on grounds of mere expediency.

The present state of the law is fraught with evils in time of peace as well as on the outbreak of war. Difficult questions must often arise between great nations. During these discussions the ships of the countries involved in these questions are avoided by shippers in distant ports, or, at all events, extra rates of insurance are charged to cover the remote risk of capture, while credits are either altogether withheld from intending operators, or are negotiated at a disadvantage. For these uncertainties and inconveniences to commerce the consumer pays heavily in the end. We may mention as an illustration of one of the endless ways in which commerce is paralysed by the least shake of confidence, that it has been recently stated that ships of the French flag had been detained months in port by their owners, under the apprehension that a war might break out between England and France before they could return from an Eastern voyage.

It is almost superfluous to point out to you the ruin which would befal numbers of the commercial classes on the first outbreak of actual war between the great Maritime Powers; while, owing to the vast extension of commerce during the last forty years, and its wide-spread ramifications by a system of credit through all nations, it would be impossible to say on the inhabitants of what country the losses would not fall, nor would it be possible to cover by good policies against risk of seizure, the enormous amount of property afloat, after it became known that it was exposed to imminent risk.

We need scarcely draw your attention to the great advantages conferred by steam on hostile cruisers, to which the merchant sailing vessels of both belligerents must fall an easy prey; nor to the advance in the prices of many of the necessaries of life, and consequent wide-spread distress, which would follow the waste of property involved in an extensive system of capture and destruction, carried to unprecedented lengths by all the appliances of modern science.

No doubt, under the declaration adopted at the last Paris Congress, that the flag shall cover the cargo, commerce might, in the course of a protracted war, be eventually carried on in neutral bottoms, and consequently be interfered with much less than would have been the case in the absence of that declaration. But a long time must elapse before the trade of the world could adjust itself to the new circumstances; many vessels owned in the belligerent States would be detained idle in port, and the consequent extravagant rates of freight would impede the free interchange of commodities on which the welfare of mankind is daily becoming more and more dependent.

As this question has the peculiarity of being at once a Commercial and State question, we shall probably not be stepping beyond the province of this Chamber, if we venture to point out some of the political advantages which it seems to us would follow the proposed change. Our whole navy would become available for the protection of our shores and colonies; its power would no longer be liable to be partially diverted from its paramount duty, to the alluring one of pillaging the commerce of our adversaries, or the far more difficult one of protecting our own.

Great Britain, being at once an European and American Power, is more liable than any other to be drawn into great maritime wars. The knowledge of this fact, coupled with the declaration of Paris, that the flag shall cover the cargo, must, as we have already seen, tend to procure for the vessels of other nations, less exposed to become engaged in such contests, a systematic preference, especially in distant ports. The proposed change would thus relieve the British mercantile marine from the danger of serious disadvantage in time of peace, as well as from that of utter inactivity in time of war; and as it is from our merchant service that our navy must ultimately draw its reserve of sailors, it is most important, in a national point of view, that the mercantile marine should not be placed, as at present, under circumstances calculated unfairly to affect its prosperity and extension.

And lastly, we can conceive nothing more likely to alienate the colonies from the mother country, than that their ships and floating property shall be endangered by a war originating in some European question, about which they may be wholly indifferent.

The arguments in opposition to the change are, as we understand them, as follow:—

First.—That war must be made calamitous, in order to expedite its termination and indispose nations to resort to it on frivolous pretexts.

This argument is open to a simple *reductio ad absurdum*, for, if logically carried out, it would justify the most atrocious practices of savage ages; and in contradiction of it, we have the most happily expressed opinion of Lord Palmerston, who said in 1856,—

"If we look at the example of former periods, we shall not find that any powerful country was ever vanquished by losses sustained by individuals; it is the conflicts of armies by land or of fleets by sea that decide the great contests of nations, and it is perhaps to be desired that these conflicts should be confined to the bodies acting under the orders and directions of the respective States."

And in illustration of his Lordship's assertion it will be remembered, that the first Napoleon attained the highest point of his power years after the naval forces of France, and with them her foreign maritime commerce, had been destroyed by the battle of Trafalgar.

Moreover, a heavy tax levied to meet the current expenses of a war, is a far more just means towards checking the warlike passions of mankind, than the sacrifice of particular classes, among whom it is proposed to spread ruin, simply to insure their strenuous advocacy of peace.

Secondly.—That the prospect of prize money lessens the cost of manning the navy.

It is, however, most short-sighted and narrow economy to attempt to keep down the direct expenses of the navy by a system which holds the commerce of this country in uncertainty. Moreover, the sailors get in fact so small a share of prize money, that we do not believe that the distant chance of it has any appreciable effect in inducing them to enter the service.

Thirdly.—That such a change in International Law will not be respected longer than may suit the convenience of either belligerent.

Past history, however, shows that European nations have, with rare exceptions, respected the principles of International Law, when well defined, and established by their unanimous concurrence. If private property at sea were declared inviolate, its seizure would morally be an act of piracy. So far are nations in the present day from being inclined to push war to extremes, not sanctioned by international usages, that they have on several occasions shrunk from availing themselves of practices still nominally permitted; as witness the release, by the Emperor of the French, of the Austrian merchant ships seized in the late war, in order, as he expressed it, to "attenuate the evils of war. And, moreover, the principle, if once agreed to, could not be violated without risking a collision with those neutral nations whose subjects might have intrusted themselves and their property under the flag of a belligerent, in full faith of security from either capture or detention.

All the arguments so far brought forward in defence of the exceptional state of morality on the ocean seem to us utterly insufficient. The present practice appears to have its origin in the piratical character of the early navigators; and although during times of peace the inviolability of property at sea has long been acknowledged by all civilised countries, war is no sooner declared than the order is issued to seize, burn, and destroy the maritime property of the enemy, in a spirit worthy only of the most barbarous times.

As President of this Chamber, which is specially concerned in guarding the interests of commerce, I have, of course, had to dwell largely upon the importance to the mercantile world of the proposed change. But beyond this, the Directors believe it is demanded by the more humane spirit of the times. Without it, the conduct of the future naval wars—in which this country is peculiarly liable to be engaged—will stand in most unfavourable contrast with that of the recent European conflicts on land, and the injuries sustained by individuals will only aid in embittering hostile feelings, and in making more difficult the re-establishment of peace.

In submitting the foregoing observations for your impartial consideration, the Directors of this Chamber have the fullest confidence that they will receive that attentive perusal which the importance of the subject is entitled to demand; and should they be so fortunate as to obtain your concurrence in the views therein propounded, they doubt not you will avail yourselves of every fitting opportunity of enforcing the same upon the notice of Her Majesty's Government, and of the House of Commons.—I am, gentlemen, yours faithfully, Edmund Potter, President.

To J. A. Turner and Thomas Bazley, Esqrs.,
Members of Parliament for the City of Manchester.

[COPY.]

To the Right Hon. the Lord Viscount PALMERSTON, K.G., G.C.B, &c., &c., &c.,
First Lord of Her Majesty's Treasury.

The Memorial of the Directors of the Manchester Chamber of Commerce, by their Chairman,

Respectfully showeth,—That public attention is daily becoming more and more alive to the inconsistency in the existing rule and practice of International Law, as affecting the property of the subjects of belligerent States on land and at sea respectively.

That throughout the hostile operations which have been carried on in Europe within the last few years, the ships and cargoes of non-combatants have, as in former wars, been held liable to seizure, confiscation, or destruction, while, on the contrary, a strong disposition has been manifested to abstain from inflicting unnecessary injury upon private property on land.

That your memorialists are of opinion that it is both desirable and politic that the latter course of action, so much more in accordance with the principles of justice and humanity, should, if possible, be extended towards private property on the high seas in time of war; and the assembling of an European Congress would appear to offer a most favourable occasion for the discussion of so important a change in International Law.

That the general adhesion of European nations to the principles of Maratime Law, comprised in the basis laid down at the Congress of 1856, taken together with the surrender by the French of the Austrian merchant vessels, captured by them in the late Italian war, lead your memorialists to indulge the hope that the question would be favourably entertained at the approaching Congress.

That, inasmuch as it is universally admitted that no war has been brought to a termination by reason of the amount of injury or loss inflicted upon private persons, but rather from political considerations, or by the decisive superiority of the military or naval power of one of the belligerents, your memorialists would respectfully submit that the proposed change would not be open to the objection of having a tendency to prolong hostilities, but, on the contrary, by mitigating the calamities of war, it would confer a lasting benefit upon mankind at large, and directly promote the interests of civilisation,

Your memorialists would, therefore, earnestly entreat your Lordship to take this most important subject into your early and favourable consideration, and that you will exercise the influence of Her Majesty's Government in bringing the same under the notice of foreign nations, either at the approaching Congress, or in such other manner as your Lordship in your wisdom may deem most effectual.

And your memorialists will ever pray.

For and on behalf of the Board of Directors,
(Signed) EDMUND POTTER, President.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

(FROM A CORRESPONDENT.)

II.

(CONTINUED FROM DEC. 31, 1859.)

THE second division shows the number and antecedents of the known houses of bad character frequented by the criminal class. Briefly, they are thus designated:—

Houses of the receivers of stolen goods	3,122
Houses, the resort of thieves and prostitutes:—	
Public houses	2,402
Beer shops	2,151
Coffee houses	386
Other suspected houses	2,157
Houses of ill fame	7,915
Tramps lodging houses	6,987
Total	25,120

From the information obtained from the Judicial Statistics, it appears that the police districts are divisible into five classes, according to the number of recognised houses of bad character.

(1). In which the number of houses varies from 3,000 to 4,300—and this includes Lancashire, with 4,300, and London, with 3,100 houses of bad repute.

(2). In which they vary from 1,000 to 2,400—and this includes York, with 2,400, Wales, with 1,400, Stafford, with 1,100, and Warwick, with 1,000 houses of bad character.

(3). In which they range from 700 to 900—or the counties of Gloucester, Chester, Lincoln, and Southampton.

(4). In which they extend from 400 to 600—or the counties of Derby, Devon, Kent, Leicester, Nottingham, Norfolk, Somerset, Suffolk, Sussex, and Worcester.

(5). In which the houses are recorded at, or under, 300—and this contains the remaining districts.

The third division of the subject records the total number of indictable offences, or crimes committed, as far as known to the police, during 1858, in England and Wales. This statement, which of course falls far short of a record of the actual number of indictable crimes committed, shows an aggregate of 57,868 cases. With regard to these results, it is necessary to bear in mind that "the crimes reported to have been committed, now returned by the police, form a class of facts which had not been previously the subject of any general record, and statistical enumeration." "But these returns refer only to such crimes of a graver nature,"—to the exclusion of all lighter offences (dealt with summarily, and, under certain circumstances, similar crimes)—"as would be the subject of some hue and cry, or as would lead to application for police assistance. It may be assumed that they include all offences of a graver character against the person; all violent offences against property; all offences of cattle, horse, or sheep stealing; all simple thefts of property, to a certain marked amount; with all malicious offences against property." The number of such indictable offences are stated to have been, in the months of

October, November, December	16,596
January, February, March	15,785
April, May, June	12,895
July, August, September	12,592
Total	57,868

Of the county and police districts in which the largest number of detected crimes of an indictable character have been committed, the following, arranged from the official documents according to numerical precedence, are the more important:—

(1). Lancashire heads the list with the catalogue, in round numbers, of 17,000 cases.

(2). Next comes the metropolitan district, and this records 11,000 cases.

(3). York can enumerate 5,000 known crimes; and Warwick 3,000.

(4). Wales, Gloucester, and Chester each number 2,000; and Sussex 1,000.

(5). Kent and Southampton have 900; and Leicester, Worcester, Northumberland, Suffolk, and Somerset have each 800 offences.

(6). A calendar of from 500 to 700 offences includes the counties of Devon, Berks, Durham, Essex, Lincoln, Monmouth, Norwich, Nottingham, and Salop.

(7). Whilst those districts which catalogue fewer than 500 indictable crimes appear in the last division.

From the number of detected indictable offences, the Judicial Statistics pass on to indicate the number of persons, male or female, proceeded against in the courts of justice during the year 1858,—the number, that is to say, who passed through the hands of the police, either for indictable crimes, or for offences determined summarily. It will be remembered that the total number of persons proceeded against was 434,492:—of which 30,458 were upon charges of an indictable character, and 404,034 upon charges of a character determined summarily. These figures go far to help us to realise the amount of actual crime which exists in the country. They can but approximate to the truth however; for, although they record the amount of detected crime, they tell nothing of undetected crime, and unpunished offences, to which those cases which fall under the cognisance of the law bear but a small proportion. As the nearest approach, within our reach, to the truth—as those which disclose facts only guessed at in former years—these results of the police returns deserve the most careful consideration. The only point which seems to demand explanation beforehand is this—the extreme disproportion between the number of known indictable crimes committed, and the number of persons proceeded against for offences of an indictable character. The respective numbers are 57,868 and 30,458. This discrepancy in all likelihood arises from two causes. First, from the present somewhat imperfect organisation of the police establishment in certain districts. Secondly, that before detection for any single offence, many indictable crimes have been committed, with impunity, by a single criminal.

The first point to consider, with reference to the total number of persons taken into custody by the police, would seem to be this—the disposal of the persons apprehended. In estimating the amount of crime in a country, we must clearly be guided not by the number of convictions, either before a jury, or summarily by one or more magistrates, but rather by the number of persons who have been proceeded against. Any other course of computation would involve us in many apparent difficulties. Where the liberty of the subject is at stake—little as in justice we ought to apply it to a certain class of society, under special conditions—the theory is sound that all persons are innocent until proved guilty. But when the matter is viewed from the point of one who is a student of, what for a better term may be called, social science, the case is wholly different. When dealing, as the police to a great extent do deal, with a recognisedly public criminal class, it is unwise to employ, in theory even, this fiction of the law. The fact of apprehension is a *prima facie* proof of guilt, in the eyes of the statist. When catalogued in police reports as either known thief, vagrant without visible means of sustenance, suspected person, habitual drunkard, or with character not ascertained, a prisoner can hardly expect to be enrolled by the registrar as one ill-used by the police, although some legal quibble, some lost link in the chain of evidence, some disinclination to prosecute, or some other favourable accident, ensures his escape this time from the hands of justice. Although he may fail to be convicted for the present offence, even if he be positively guiltless of the present charge, he is a member of a community which lives on the proceeds of crime,—and he has been implicated in other offences for which he has secured immunity. The case of those whose former character is proved to be "good" in the opinion of the police, undoubtedly forms an exception to this rule; yet, if we could ascertain the per centage

of this class which was discharged with the understanding that no stain rested upon the character, it would be probably found to influence the result of our calculations in a very small degree. When we remember that only one-fifth of the criminal class in is prison, and four-fifths at large, it will not be considered unjust to estimate the amount of crime in England by the number of persons apprehended by the police. Experience showa that even then we shall obtain only a fraction of the truth.

The following table will show the manner in which those who were apprehended were eventually proceeded against. And first for those proceeded against for indictable offences:—

	Males.	Females.	Total.
Discharged	7,965	3,824	11,789
Discharged on bail for further appearance if required	160	31	191
Bailed to appear for trial	1,103	227	1,330
Committed for want of sureties	66	16	82
Committed for trial	13,161	3,905	17,066
Total	22,455	8,003	30,458

Hence it appears from the last table that 60 per cent. of those apprehended were proceeded against further—and this for indictable offences. From the next table it will be seen that about one-third of those taken into custody for summary offences were discharged:—

	Males.	Females.	Total.
No. of persons proceeded against	319,834	84,200	404,034
Discharged	103,714	40,030	143,744
Convicted	216,120	44,170	260,290

The number of persons proceeded against on indictment has been said to be 30,458. The tables from which this information is gained will enable us to perceive in what districts these crimes chiefly abound, and to classify the counties according to the number of offences. These results will be given positively, and independent of population. An analysis of the table shows that five classes may be formed, with clearly defined divisions.

(1). Lancashire and London uphold their unenviable notoriety for crime—and Yorkshire is not far behind them. These will make the highest division: Lancashire with a calendar of 8,000 indictable crimes; London, with 5,000; and York, with 3,300.

(2). Warwick records 1,400 offences; and Chester and Wales severally enumerate 1,200.

(3). Counties which betray an amount of crime varying from 500 to 800 cases in the year, make the third division. It includes Kent, Gloucester, and Southampton, with 800 cases; Devon with 700; Worcester with 600; and Durham, Lincoln, Norfolk, and Somerset, with 500 crimes.

(4). This class comprises the counties of Berks, Nottingham, Suffolk, and Sussex, with a catalogue of 400 indictable offences; Cornwall, Derby, Essex, Leicester, Monmouth, Northumberland, and Salop, with 300 cases; and Bucks, Cambridge, Wilts, Dorset, Kent, and Oxford, with 200;—in fact, all counties the calendar of which rises from 200 to 500 cases of indictable crimes.

(5). And in the last division are found all the remaining districts in which the number of persons proceeded against by indictment does not amount to 200:—all counties not previously mentioned.

The classification of the counties, independent of the amount or characteristics of population, present very similar results, only on a larger scale.

(1). In the first class, again, must be placed London, and its 104,000 cases of summary offences; Lancashire, and its 76,000; York, and its 35,000 cases.

(2). Wales shows a calendar of 20,000 cases; Stafford of 19,000; Durham of 14,000; and Chester and Northumberland, severally of 10,000.

(3). Gloucester, Somerset, and Warwick, have each 7,000 summary offences; Devon, Lincoln, and Southampton, each 6,000; Kent, Salop, and Worcester, 5,000; and Cornwall, Derby, Monmouth, Norfolk, and Nottingham, 4,000.

(4). The next division includes Berks, Bucks, Cumberland, Essex, Leicester, and Northampton, with 3,000 cases; and Cambridge, Hereford, Herts, Oxford, Suffolk, and Wilts, with 2,000.

(5). And in the last may be comprised the remaining districts, wherein the number of summary procedures fall short of 2,000 cases in the year.

It is needless, after having considered the various results of the statistics which indicate the number of persons proceeded against summarily, and upon indictment, and having arranged the various counties, according to their pre-eminence in crime;—it is needless to classify the districts according to the results of those tables which record the aggregate of the two former results. It will be the better plan—and this system possesses advantages over the other—to arrange the counties in order, according to the positive amount of procedure, either summarily or by indictment, and to number them according to rotation. A glance will then suffice to see the position any given county occupies from a criminal point of view, with respect to its neighbour. In the former cases, approximate numbers were sufficiently exact. In the present, the actual amount of crime will be given. This will add, even at the expense of repetition, to the completeness of the scale; And it is only needful to add that the positive, not the relative or proportional, amounts of crime are treated.

	No. of Persons.		No. of persons.
1. Metropolitan districts	108,922	22. Suffolk	4,017
2. Lancashire	84,940	23. Cornwall	3,825
3. York	38,693	24. Leicester	3,733
4. Wales	20,892	25. Cumberland	3,476
5. Stafford	19,451	26. Sussex	3,437
6. Durham	14,471	27. Essex	3,304
7. Chester	11,429	28. Northampton	2,961
8. Northumberland	9,916	29. Berks	2,873
9. Gloucester	8,231	30. Bucks	2,764
10. Warwick	7,927	31. Wilts	2,614
11. Somerset	7,432	32. Hereford	2,567
12. Southampton	6,763	33. Cambridge	2,549
13. Lincoln	6,540	34. Herts	2,359
14. Devon	6,243	35. Oxford	2,172
15. Kent	6,210	36. Surrey	2,015
16. Salop	5,660	37. Beds	1,494
17. Worcester	5,664	38. Dorset	1,388
18. Nottingham	4,881	39. Huntingdon	1,166
19. Norfolk	4,876	40. Westmorland	823
20. Derby	4,599	41. Rutland	247
21. Monmouth	4,572		

The foregoing details have been stated irrespective of sex. The present letter may therefore fitly conclude with a general summary of the results of the extent of crime in England and Wales,—viewed positively,—when this element is taken into consideration.

Number of the known criminal class at large		134,922
Males	81,699	
Females	53,253	
Number of persons proceeded against for indictable offences		30,458
Males	22,455	
Females	8,003	
Number of persons proceeded against for summary offences		404,034
Males	319,834	
Females	84,200	
Total number of persons proceeded against		434,492
Males	342,289	
Females	92,203	

INQUIRER.

[TO BE CONTINUED.]

Agriculture.

FARM LETTING.—LEASES.

THROUGHOUT this country there is nothing which operates more widely for good or ill than farm letting. We last week examined some propositions of the Bath and West of England Agricultural Society which pointed to alterations in the English system of yearly tenancies, and seemed framed rather with a view to render that system permanent, than with any large or genuine purpose of improvement.

We now advert to a discussion at the Inverness Farmers' Society on "The mode of letting farms; and the terms and conditions of entry best calculated to preserve and advance the interests of landlord and tenant, and to promote those of the country at large." The Inverness farmers start from a point much in advance of the West of England Society; for the former dealt with a system of management by which farms are always let on lease, while the latter were embarrassed with a system which excludes leases, the first and most indispensable condition of good husbandry. The subject was not introduced by any formal lecture, as is most commonly done at Farmers' Clubs; but the thesis having been announced, the members at once entered upon its discussion Mr Sinclair thought that the mode of letting farms which was generally adopted was satisfactory. He considered it should be accomplished, as far as possible, by "private bargain, and without advertising." Mr Gentle also seemed quite satisfied with the existing practice of farm letting which prevails in the district. "He was not prepared to recommend any change either in the mode of letting land, or as to the term of admission or demission. Landlords were entitled to the same freedom as other vendors in bringing their properties into the market, so as to make the most of them. They, as tenants, had a horror of advertising, particularly in regard to the farm possessed; but, if they needed a farm, they had no objection to see the broad sheet full of advertisements." And he suggested some alteration as to the periods of entry of certain farms. So far, no one doubted the importance of a lease—indeed, its necessity was assumed—but the point taken up by the two preceding speakers as that of the most interest, was whether a tenant, whose term was coming to an end, should be subjected to a general competition, by the means of advertisements, for offers for the farm. And it is difficult to understand why the owner of a farm should not ascertain its market value by advertising it, or by having it valued, or otherwise. At the end of a lease, the way for a new bargain is clear to both landlord and tenant.

Mr Simpson, in reference to the remarks of Mr Gentle, said the subject had "a much wider bearing than whether it was by public competition or private arrangement that the letting of farms should be effected. Nine-tenths of the farms where leases expired were let by private arrangement between landlords and tenants. So that, practically, what all would recommend was the course

followed in the large majority of cases." The subject proposed for discussion went much beyond that, and called upon the members to express an opinion "how good rents could be paid to landlords, good profits obtained by tenants, and an increasingly large supply of home agricultural produce furnished to the rapidly-growing millions of our population." To the landlord the advantage of a full rent seemed to Mr Simpson so clear as to require no exposition, though, from the way in which so many English estates are managed, high rents would often appear to be but secondary considerations. Nor is the payment of a full rent "on the whole detrimental to the farmer, for it made him more alive to the spirit of improvement around him, and the knowledge that he was paying the full money value of his occupation was the best means of setting him free from the trammels of the old feudal feeling that a tenant should be politically and socially subservient to his landlord." But then the tenant should receive a fair equivalent for his high rent. No landlord can reasonably hope to obtain, nor can any tenant pay, the full rental value, unless the land is "in a state of fitness in houses, enclosures, and drainage, for profitable occupation." It is as absurd to expect a manufacturer to produce goods profitably with imperfect machinery, as that a farmer should produce profitable crops of corn "on undrained land, or butcher-meat without the necessary accommodation for stock." Above all, leases should be simple and self-interpreting, and it was suggested that, in case of differences as to construction arising between landlord and tenant, they should be referred to an arbitrator to be named in the lease. Looking to the contingencies of life and otherwise during the currency of a lease, it is doubtful whether much could be gained by naming a special arbitrator, but, if the provisions of a lease be practical and simple, there will seldom be any difficulty in construing them. The real difficulty of leases consists in the complex rules and restrictions by which landlords seek to bind tenants. Thus, Mr Simpson observed, "One of the most fertile sources of dispute—the rotation of cropping—was being he thought removed by the progress of events. With wheat at rather less than 10s per cwt, with a languid demand—beef and mutton at 60s per cwt, with a demand which the supply cannot overtake—with wages for agricultural labour yearly increasing,—there was little question that grass land would now give better and surer returns than land under corn crops, and thus there was more danger of too little than of too much corn cropping." The moral of all this is, that all questions of cropping should be left during the currency of leases to the discretion of the occupiers of the land.

The next speaker, Mr Smith, a factor, betrayed some of that unwillingness to abandon cropping rules which so materially interferes with agricultural progress. He thought "leases for a reasonable period indispensable, and that at the end of a lease the farm should be gone over by a competent person and revalued"; that consideration should be had to the tenant's "unaided improvements," and a preference should be offered to the old tenant at the rent ascertained by the valuation. He admitted that "the regulations and conditions tenants were asked to subscribe when taking a farm were, in some cases, full of unnecessary or absurd restrictions, and burdened with vexatious obligations," and "hence some said let there be no regulation at all as to cropping, but allow every tenant to crop as he pleased," but the possibility of bad farmers must be provided for. Among farmers there would be some who "would manage or crop their farms, not only to the injury of their landlords, but ultimately to their own loss. Some regulations were therefore necessary. They could not be too few for good tenants; but to prevent abuse, it was advisable to lay down rules, and that a certain rotation of crops should be agreed upon, with this understanding, that if the tenant showed himself to be an intelligent and persevering agricul turist, and, after trial, he found that from some cause or other his farm could not be profitably cultivated by strictly adhering to the restriction of cropping he had bound himself to, and if he could suggest some alteration for his benefit, and not disadvantageous to the landlord, it should be adopted."

Can anything be more completely condemnatory of cropping regulations than that apology for them? First, the intelligent farmer is to be tied to regulations confessedly only required to protect the landlord's interest against a bad farmer, and the most enterprising occupier is only to obtain a special dispensation after proving that he cannot farm profitably under the regulations. Then the regulations may be well enough as rules for cropping at the commencement of a lease, and may become utterly wrong during its progress. Many of the most energetic men are deterred from embarking in husbandry under such trammels. They know that, with variations of seasons and alterations in supply and demand, there is risk enough in the business of a farmer without any of these artificial difficulties. It is not thus that enterprise in commerce and manufactures has been generated, and if farming is to be rendered as attractive as it ought to be to men of capital and energy, this plan of tying them down by regulations, framed for tenants whom landlords ought never to have accepted, must be abandoned.

Mr Fraser said landowners should know accurately the value of their lands, and for that purpose they must procure valuations by competent persons, and the tenant must take care not to agree to pay too much rent; but there was no reason why an old tenant should be allowed to hire a farm for less than its value merely because he had held it for a previous lease. The landlord ought to erect all necessary buildings, and the plan of requiring the tenant to invest his capital in houses and buildings was a barbarous one, which ought not to be perpetuated. "Every tenant should get his farm unhampered; let him have suitable accommodation for working his farm, and let him pay accordingly. He disapproved of restrictions as to the rotations of cropping; means might be taken to protect the landlord, and yet leave the tenant full scope for developing the resources of his farm." Mr Macleod thought there are very few landlords who had pretty well ascertained the value of their farms, "and who did not receive the value of their property;" and that is probably the case in Scotland. And it is the case also in England, for landowners commonly get all the rent, and often more than the rent, the land in its actual condition is worth, though by better arrangements it might be rendered more valuable to both the owner and occupier.

Mr Gordon said that, in some instances, tenants on a 19 years' lease, who had stopped short in their improvements, were encouraged to renewed efforts by an immediate extension of their leases, showing that even leases of that duration are scarcely long enough to ensure the most complete development of agricultural industry. Several speakers also said that the less an incoming tenant has to pay for "meliorations," *i. e.* permanent improvements effected by his predecessor, or for valuations, the better, it being found that such things lead to disputes and litigation without inducing improvement.

If we compare the manner in which the question of letting farms was discussed at Inverness with that of its treatment by the West of England Society and Mr Acland, it will be seen at a glance that the Scotch farmers and occupiers, by the aid of their system of leases, are far in advance of their brethren of the West of England.

THE SEASON; CROPS AND PROSPECTS.

During the month of December we had about ten days of the severest frost experienced for many years. The thermometer marked for several days 28 degrees of cold. Of course all kinds of out-door work came to a stand, with the exception of carting out manure. Since the break up of the frost the weather has been very wet, scarcely any twenty-four hours having passed without heavy, frequently very heavy, falls of rain. On all the strong lands the land has become so saturated, that several consecutive dry days must occur before work on the land can be resumed. The result is, work is somewhat behind, and compared with the last few years there is an unusual breadth of land not yet ploughed. But perhaps the contrast of the present with several past seasons is most strongly shown in the wheat crops. The wheat sown before the middle of October came up rapidly, and now presents a fair and healthy plant. But about the middle of October there were some heavy rains, followed by frosts sharper than ever remembered to have occurred in that month. November was, for the most part, a damp, open month, and most of the wheat sown went in then. This wheat has not yet made its appearance above ground, and what the result may be it is difficult to predict. Reference has been made to 1837, when a somewhat similar wheat season occurred, followed by a weak plant, numerous pieces having been ploughed up in many districts.

The state of the markets, however, indicates that as yet no serious apprehensions are entertained as to the state of the wheat crops, for the average price is only a shilling or two higher than it was at the corresponding period of last year. Barley is selling well, and all kinds of grain bear prices relatively higher than wheat.

The farmer's main reliance now is his live stock. Fat meat continues to sell at high prices, and, though the supplies have been abundant, the public seems equal to afford an effective demand for all that can be brought to market. The cattle at the metropolitan markets have been remarked to be in unusually good condition; and provender having been less costly than of late years, grazing has been fairly remunerative. Store cattle have continued healthy. The pastures during the autumn produced an exuberant growth of grass, which, since the frost, has been readily consumed, so that with little assistance stock of all kinds are doing well.

Roots will be scarce. Great quantities of mangold wurtzel were destroyed by the October frost, while the white and hybrid turnips have been a good deal injured. In the border district around Kelso, a local report estimates that not more than one-half of the average quantity of roots now remains as a provision for the winter and spring keep of stock.

Altogether the farmer's prospects at the present moment are somewhat of a chequered character. Energy and judicious enterprise will be needed. Security of possession and freedom of action in the management of the farmer's business are more than ever indispensable. The times, the prices, and the state of the season, all call for exertion on the part of farmers, and co-operation and rational management of their estates on the part of the owners of land. With these, a prosperous future is in store; where absent, distress, poverty, and ill-paid rents will be inevitable.

Literature.

Views of Labour and Gold. By W. Barnes, B.D. London: Smith, Soho square. 1859.

L'Usure—Sa Definition. Par G. E. Marin-Darbel. Paris: Guillaumin. London: Dulau and Co., Soho square. 1859.

If a reviewer did not soon lose the sense of wonder, the critical profession would be in a continual state of surprise, from inability to conceive why or how three-fourths of the books that come under their notice should ever have been written or published. Even in the field of economical science, by no means popular either with loose writers or light readers, we meet every day with some new volume whose weakness, staleness, and clumsiness prompt us to inquire what manner of man it can be who thinks it worth his while to repeat badly what has been well said already, or to contradict, without studying them, doctrines which have long ago been discussed, corrected, and settled. It is curious to read these books; with their *naïve* repetitions of truths as well known to economical students as that two and two make four; and their equally *naïve* reproduction of exploded absurdities in a manner which makes it plain that they have never read the principal works of the last twenty years on the subject of which they treat. It is indeed probably because men read so little and so carelessly that they write so much. Few men, one would think, would wittingly write an unreadable treatise to say what has been much better said in well-known and widely-circulated books; and we must therefore suppose that these repetitions of truisms and reproductions of antiquated nonsense proceed from men who have no idea that they are some twenty years or more behind, not merely the opinions of great authorities, but the general knowledge of well-informed men, in regard to the questions they aspire to elucidate. If they would take the trouble to ascertain what is the actual state and present position of a subject, before undertaking to teach it, the inquiry would not be long or difficult, and it would prevent them from wasting their time in writing worthless books, and that of better-informed men in reading enough of these books to learn how utterly bad they are.

A very bad specimen of this kind of wasted labour is before us in a little volume entitled "Views of Labour and Gold, by W. Barnes, B.D." It is remarkable for three things: an impertinent habit of coining unnecessary, ugly, and un-English words, to express what is already expressed by well-understood and familiar terms of scientific definition; a conceited manner of repeating, in these new forms, familiar axioms and simple truisms, as if they were original discoveries; and a want of coherence and straightforwardness under cover of which a multitude of absurdities escape notice. The liberties taken with the Queen's English amount to absolute treason against common sense and grammar. "Lifegear," "unworksome," "onholding" (continuous), "manifoldness," and the like, are simply stupid and silly affectations. Another affectation, that of a new technical form of expression and use of words, is carried to so great an excess, that none but an economist can read the book; while the poverty of the ideas thus expressed is such that every economist must laugh at it. Strung together without adhesion or arrangement, the fragments of which the volume is composed lead to no conclusion and contain no information. They resemble nothing so much as the answers of a dull and ill-instructed student to a badly-devised Examination-paper; and we should be sorry for the examiner who had many such to read. What possesses any man who can read or write at all, to read to so little purpose, and write to no purpose at all?

There is just one notion which seems to exist in the author's mind, and of which he affords here and there disconnected glimpses, which give to his book the only kind of unity it possesses. We cannot prove it against him, because his style is too obscure and his views are too hazy ever to allow him to state any notion in broad and definite terms. But he seems to have a feeling of antagonism to civilisation; a vague and incomplete idea that gold is a curse, division of labour a mistake, machinery a mischief or a worthless acquisition at best, capital an enslaver, and above all, paper a snare and a delusion. His most definite charge against civilisation as a whole is that it creates the toothache; a point which we will leave him to settle with surgeons and travellers. Gold is, in his view, the source of avarice and selfishness; for, though he has been taught that bullion and capital are not identical, he is unable to see—not we suppose having been told in so many words—that the pursuit of *gold* is a myth, a nonentity; that the pursuit is that of wealth, whether represented by gold, or lands, or cattle; that if this be more intense under a high civilisation than it ought to be, it is only in a barbarous age that gold is the chief or a chief representative of the miser's acquisition; that in this age of advanced civilisation he possesses a very little gold indeed, and does not care to possess any; that, in a word, whatever be the evil effects of an over-eager pursuit of riches, they spring from the institution of property, not from that of money. That certain physical evils spring from the division of labour may be true enough, though greatly exaggerated by Mr Barnes and sentimentalists of the same school; but the present age is advancing towards a remedy in reduced hours and better places of work, as well as ampler and more available means of recreation. The uselessness of machinery is alleged on the ground that the writer can find no evidence that the labour superseded by machinery—or rather the labour which would be required to do the work now done by machinery—is greater than the labour required to produce the machinery; in other words, that machinery is a saving of labour at all. This is merely silly; and the difference in the amount of production *per head* of the population, now and two centuries ago, despite the diminished hours of labour—which must be wholly attributed to machinery—is too notorious to require proof. That labour is enslaved by capital—that the labourer would be more free were there no large accumulated capitals—is a repetition of a cant cry which Mr Barnes has picked up from some Trades' Union agitator or Socialist ignoramus of the school of Mr Kingsley, and repeats with parrot-like persistency of utterance and facility of comprehension. But for the accumulation of said large capitals, the labourer would have no means of subsistence at all; he would be a workman on his own account, without capital or machinery, much more the slave of his customers than now of his employer. The man who, in this age, echoes the declamation of the tyrants of the Trades' Union against "the tyranny of capital," can be acquitted of dishonesty only on the score of the densest ignorance. A very few inquiries in Manchester or Preston, Staffordshire or Sheffield, would very completely expose the folly and falsehood of his assumptions.

In regard to a paper currency, Mr Barnes's ideas are as confused as we might expect to find them. He talks about "pledging a nonentity," "taking from the holder of labour his lifegear for nothing," and so forth; and seems to conceive that a paper currency not representing bullion actually in the hands of the issuers represents nothing at all, or, at least, is not an honest species of paper money; and secondly, that a currency not convertible into substantial property, bullion or otherwise, is worthless. The first theory would make a paper currency valueless; its chief use being to liberate for use as capital wealth that must otherwise be used in the unprofitable functions of exchange, and being accomplished by the issue of paper representing capital not actually in the hands of the issuers, but belonging to them, employed at a profit by them, and available for the redemption of their promises. Further, though a paper currency be inconvertible, and in fact represent nothing, government can bestow on it a substantial value by receiving it in payment of taxes; and the evil of such a system lies not in the intrinsic worthlessness of the paper, but in the absence of all security against its depreciation by over-issues.

Another book, of higher pretensions and character, but of no real value, written also with little clearness of purpose, and inspired mainly, if not by ignorance, yet by confused notions and imperfect apprehension of economical doctrines, is M. Marin-Darbel's "L'Usure; sa Definition." Two-thirds of this volume are filled with historical, philological, and general disquisitions which have no tendency to elucidate its doctrine, and throw little new light even on the various opinions hitherto current in regard to "usury"; though they serve incidentally to prepare the reader for a wrong or useless result, by showing the utterly unphilosophical character of the author's mind, and in some cases the shallowness of his knowledge. His theory of the "equitable" rate of interest is one of the most curious speculations we ever remember to have seen. Setting aside the palpable fact that the law-fixed rate has varied from age to age according to circumstances, and that the ordinary rate varies now in different countries from five per cent. to eighteen, he affirms that that rate is "legitimate" which is proportionate to the number of years contained in an average man's period of working life; which, to suit the five per cent. rate, he fixes at twenty. What possible relation the two can have, we cannot conceive; nor is it possible to understand the argument on which the theory rests. (Those who would like to try will find it at p. 281 of "L'Usure.") It is quite clear that the legal rate of interest has been fixed by the average rate at which, when it was fixed, money could generally be borrowed on good security; and that this rate depended upon the rate of commercial profit, and that again on the proportion between capital and employment for capital. But this simple explanation is too hard and too practical for the mind of one entirely French and more than half Socialist. Perhaps his theory may be intelligible to his countrymen; to us it is simply incomprehensible.

That parties have a right to arrange their own terms as to the remuneration of the capital lent and borrowed, but that nevertheless usury is a reality, and a crime, and that government should interfere to protect the borrower, on the ground that "*veiller à un juste repartition des fruit du travail* suivant l'equité *doit etre la fonction principale de tous les gouvernements*" (a phrase which is either mere truism, or rank Socialism, according to the sense given to "*suivant l'equité,*") are the bases of his positive doctrine; and the terms in which these propositions are asserted make us a little curious for the "definition" which is the object of so much preparation, cunningly reserved for the end of the work. That definition seems to rest on several false assumptions. First, that there is such a thing as an "equitable price" for every article, labour included, laid down by nature and independent of the market—a notion on which we shall not waste refutation. Secondly, that capital and labour contribute to production in calculable proportions, and ought (apparently) to receive a proportionate

share of the produce. Now the only mode of calculating the respective influence of each factor in producing the result—or the necessity of each to that result—*is by seeing the price that each is willing to pay for the aid of the other.* To all production, capital and labour are absolutely essential; but neither the particular labour of A, nor the individual capital of B, is an absolute condition of any one productive enterprise. A might find another capitalist, B another labourer, with ease greater or less. The measure of the need which each has of the other—in other words, of the right which each has to share in the joint product—is the price which each is willing to give the other for his co-operation. In other words, the market price *is* the equitable price; and the only assignable measure of the just share of each is the highest offer which the other can be induced deliberately to make beforehand. A third assumption, audacious as well as false, is that the lender of capital *(travail muet)* is only to receive remuneration *after* the borrower, furnishing *travail actif*, has paid himself fairly for his labour. So, if the latter be reckless or unwise, the lender is to be the loser. From these precious axioms it follows that usury is "the receiving as renumeration for capital lent more than 'the proportionate share' of the produce of the enterprise for which it is lent." How this proportionate share is to be calculated we are not told; nor does M. Marin-Darbel appear to have any definite ides. He seems also to be ignorant that a large mass of lent capital in every country is lent not for reproduction, but for consumption; and we should like to know how the annual value of this is to be determined. We must be satisfied, however, with the author's decision, that five per cent. is the largest fixed interest which an honest lender ought to receive.

Entering into conflict hereupon with various laws of economical science, he displays the usual amount of logical power and clearness of vision which belongs to the men who from time to time undertake the defence of popular ignorance against demonstrated truths. We have no time to follow him through all his absurdities. It is enough to notice that he declares that risk forms no element in determining the rate of interest, because "the receipt of exaggerated interest during some years is no compensation for the ultimate loss of the principal." Never did any sane man write a passage indicating a more profound confusion of mind and want of the commonest power of foresight or calculation. If A receive for seven years twenty per cent. for money lent to B, he will have received the principal *plus* six per cent. per annum, or nearly so, even should B ultimately fail, and not pay a penny in the pound. Or if C, a professed money-lender, lend 1,000*l* to each of twenty customers at ten per cent. for a year, is it not clear that if one of the twenty pay but five shillings in the pound, the 20,000*l* has become in that year 21,275*l*, or has brought in six per cent., despite the loss of a part of the principal?

It would not be worth while to notice such books as these, were their theories new, or unlikely to be popular. But the partisans of popular fallacies are so well satisfied with the weakest arguments, that it is necessary sometimes to expose even such crudities as these, lest it should be supposed that the doctrines of economical science are, after all, open to question; and lest writers of Mr Kingsley's school should imagine that these dissidents from economical truth are really economists, of more or less weight and knowledge, whose names may be made use of to shield the errors of those who know nothing of political economy except as a convenient target for slander and vituperation.

The Westminster Review. January.

The new number of the "Westminster" is not up to its general standard of ability. With the exception of the articles on "Government Contracts" and "Christian Revivals," there is not any paper which is likely to excite much general interest. There are two articles on the Italian question—one of them on its Sicilian phase;—lighter literature is represented by a paper on the "Realities of Paris,"—descriptive and analytical review by an abstract of Sir Emerson Tennent's books on "Ceylon,"—and the number is completed by a unique article entitled "The Social Organism."

The first article, on "Government Contracts," calls attention to the leading features of the report of the Committee of the House of Commons, which was provoked by the Dover "Churchward" packet contract. This article has a prospective value, as (even supposing the report of the Committee to produce no effect) the approaching inquiry into the Dover election cannot fail to recall public attention to this very disgraceful piece of political jobbery. The writer of the article gives great and just credit to Mr Gladstone for having, in his first Chancellorship of the Exchequer, set on foot the inquiry into the manner in which these matters are managed, which will eventually, there can be no doubt, lead to a more satisfactory and consistent administration of this department of the public service. The writer speaks rather widely in disparagement of the course pursued by Lord Palmerston's Government after Mr Gladstone's secession. Of the subsequent proceedings of the new Derby Cabinet a neat summary is given, based, of course, on the facts elicited by the Parliamentary Committee. The writer, by-the-by, deprecates the large *official* element in the formation of the Committee; and his objection is, to some extent, no doubt, just: but, on the other hand, the report of the Committee has gained additional weight with the public from the fact of its having been thus carefully guarded against any hasty assumptions on the part of inexperienced judges. The reviewer thus sums up the Dover case:—

Thus ended this drama. The contractor got all, more than all, his demands, made his stone broth, and the Government won two seats for Dover. We have given this evidence as we found it, and have followed it thus tediously and minutely, not with a view to assail this or that person, but to show by one complete instance the almost necessary mischief of this loose practice of leaving intricate and costly contracts to be handled by a variety of departments, with no definite authority to guide or bind them. The increasing instead of diminished subsidies are perhaps not its greatest mischief; but they are bad enough. Even in this little Dover contract, working under the very eyes of the Admiralty, and in the face of a passenger traffic across the Channel, counted nearly by millions, we are asked to pay some 2,000*l* a year more than the original tender, 4,000*l* a year more than the contract of 1855, and 8,000*l* or 10,000*l* more than that at which it would be taken by competent parties if thrown open to competition.

In reviewing these proceedings, it is much to be regretted that the Admiralty, in 1854, when the contract was first taken, transacted their business so very loosely. They transferred, rather than sold, their own packets, without caution, inquiry, or formality, and allowed the contractors adroitly to complicate and confound two tenders to their own great advantage, and actually to obtain for so doing an increase, instead of a diminution, of their subsidy.

The proceedings in 1855, on the extension of the contract and then on the re-grant of 2,000*l* a year, both alike without a particle of reference to either the Treasury or the Post-office, are marvellous, and we hope unprecedented. They can be accounted for only by "that run" of the Admiralty which Mr Churchward is said to possess.

In 1857 the Admiralty appear to have acted with justice and firmness in resisting a claim for services which had been more than fully provided for in 1855. Of the proceedings in 1859, we can only say that they began in error, continued in ignorance, and ended in something worse than folly. It was an error to grant away an additional 2,500*l* a year during peace to a war contract already overpaid; and it was wilful ignorance to do so without any inquiry or reference whatever to official records; and it was worse than folly, in the face of the Contract Committee's report, of the Post-office remonstrance, and of Mr Stephenson's and Sir Stafford Northcote's memorands, to force on, under most suspicious electioneering circumstances, and without a shadow of public reason, the prolongation of this contract, and at an increased subsidy for seven additional years, when actually it then had four and a half years to run.

Having said thus much of the Parliamentary officials, we must not shrink from expressing the pain with which we have read the evidence of the chief clerk of the Packet Department at the Admiralty. He it is who substantially settles the terms and recommends the adoption of contracts. The Civil Lord is so frequently changed, that he cannot possibly make himself master of the details of the business. But the chief clerk is the eyes and ears, the permanent recorder and reporter of all matters bearing on the questions which come before his ever-changing superiors. We believe that, throughout the Civil Service, the duty of thus submitting all information and all evidence is faithfully and impartially performed, but from his own evidence, and more especially his cross-examination, it appears that this permanent authority at the Admiralty did, in this Churchward business, greatly neglect to fulfil this, his bounden duty. We have already pointed out as they occurred several of these omissions, showing how plainly they promoted the contractor's interests by withholding from the authorities official information which could not have failed very materially to affect their decisions. We invite attention to his re-examination. (Blue Book, 2033 to 2538).

But while official information was thus withheld at the Admiralty, the assistant secretary of the Treasury, in a case of some delicacy, and where he stood almost alone in his opinion, would also have better consulted the public interests had he called for full official information to confront the *ex parte* statements on which he seems to have relied so readily and so exclusively; the public, too, might have gained had he been less frequent and less suggestive in his communications with Mr Churchward.

In conclusion, he recommends as follows:—

In the formation of these postal contracts there is such an elaborate complication of offices that every one is concerned and no one responsible. There are so many doors left ajar for private, official, and parliamentary considerations to creep in at, that open competition and broad daylight are practically shut out. Once a contractor, always a contractor, is the *mot d'ordre*. We think the Committee will find that to maintain a continuous application of their principles for the difficult task of diminishing, and in many cases of speedily abolishing, all subsidies, except for mere freightage, &c., they must employ the hands and demand the responsibilty of one office, or perhaps of one authority, specially constituted for that purpose. This office, or authority, might enjoy every advantage of information, and, if need be, of recorded instructions from other offices; but the transaction of the contract and all its reponsibility should rest with it and it alone. The more such an authority is removed from the contact of party and parliamentary influences, and the more permanent and independent its position, subject always to the control of Parliament and the revision of its reports, the more uniform and self-respecting will its proceedings be. We lay the more stress on this, because there is springing up a large crop of electric-telegraph contracts quite ready to share in the rich swaddling-clothes of their elder brethren of the Post.

The article, entitled "The Realities of Paris," is a rambling, disconnected paper, neither very instructive, nor very entertaining. "Ceylon" will be welcome to those who prefer having the kernel of books extracted for them, to reading in full for themselves. The article on "The Social Organism," is a surprise, and rather a ludicrous one. It is, however, a serious attempt to esta-

blish a close analogy between the physical formation and constitution of the animal body, and the body politic and social. The gravity with which this ingenious fancy is worked out in its physical details is quite overpowering. We give one passage in illustration as a curiosity in literature:—

Throughout the whole animal kingdom, from the *Cœlenterata* upwards, the first stage of evolution is the same. Equally in the germ of a polype and in the human ovum, the aggregated mass of cells out of which the creature is to arise gives origin to a peripheral layer of cells, slightly differing from the rest which they include; and this layer subsequently divides into two—the inner one lying in contact with the included yelk being commonly called the mucous layer, and the outer exposed to surrounding agencies being called the serous layer: or in the terms used by Professor Huxley, in describing the development of the *Hydrozoa*—the endoderm and ectoderm. This primary division marks out the fundamental contrast of parts in the future organism. Out of the mucous layer or endoderm is developed the apparatus of nutrition; while out of the serous layer, or ectoderm, is developed the apparatus of external action. From the one arise the organs by which food is prepared and absorbed, oxygen imbibed, and blood purified; while out of the other arise the nervous, muscular, and osseous systems, by whose combined actions the movements of the body as a whole are effected. Though this is not a rigorously correct distinction, seeing that some organs involve both of these primitive membranes, yet the highest authorities agree in stating it as a broad general one. Well, in the evolution of a society we see a primary differentiation of analogous kind, which similarly underlies the whole future structure. As already pointed out, the only contrast of parts which is visible in primitive societies, is that between the governing and the governed. In the least organised tribes, the council of chiefs may be a body of men distinguished simply by greater courage or experience. In more organised tribes, the chief-class is definitely separated from the lower class, and often regarded as different in nature—sometimes as god-descended. And later, we find these two becoming respectively freemen and slaves, or nobles and serfs. A glance at their respective functions makes it obvious that the great divisions thus early formed, stand to each other in a relation similar to that in which the primary divisions of the embryo stand to each other. For from its first appearance, the class of chiefs, is that by which the external actions of the society are controlled: alike in war, in negotiation, and in migration. As we advance, we see that while the upper class grows distinct from the lower, and at the same time becomes more and more exclusively regulative and defensive in its functions, alike as kings and subordinate rulers, as priests, and as military leaders; the inferior class becomes more and more exclusively occupied in providing the necessaries of life for the community at large. From the soil, with which it comes in most direct contact, the mass of the people takes up and prepares for use the food and such rude articles of manufacture as are known; while the overlying mass of superior men, supplied with the necessaries of life by those below them, deals with circumstances external to the community—circumstances with which, by position, it is more immediately concerned. Ceasing by-and-by to have any knowledge of, or power over, the concerns of the society as a whole, the serf class becomes devoted to the processes of alimentation; while the noble class, ceasing to take any part in the processes of alimentation, becomes devoted to the co-ordination and movements of the entire body politic.

Equally remarkable is a further analogy of like kind. After there has taken place in the embryo the separation of the mucous and serous layers, there presently arises between the two, a third, known to physiologists as the vascular layer—a layer out of which is developed the system of blood-vessels. The mucous layer absorbs nutriment from the mass of yelk it encloses; this nutriment has to be transferred to the overlying serous layer, out of which the nervo-muscular system is being developed; and between the two arises the system of vessels by which the transfer is effected—a system of vessels which continues ever after to be the transferrer of nutriment from the places where it is absorbed and prepared, to the places where it is needed for growth and repair. Well, may we not clearly trace a parallel step in social progress? Between the governing and the governed there at first exists no intermediate class; and even in some societies that have reached a considerable size, there are scarcely any but the nobles and their kindred on the one hand, and the serfs on the other: the social structure being such, that the transfer of commodities takes place directly from slaves to their master. But in societies of a higher type, there grows up between these two primitive classes, another—the trading or middle class. Equally at first as now, we may see that, speaking generally, this middle class is the analogue of the middle layer in the embryo. For all traders are essentially distributors. Whether they be wholesale dealers, who collect into large masses the commodities of various producers; or whether they be retailers, who divide out to those who want them the masses of commodities thus collected together; all mercantile men are agents of transfer from the place where things are produced to the places where they are consumed. Thus the distributing apparatus of a society answers to the distributing apparatus in a living body, not only in its functions, but in its intermediate origin and subsequent position, and in the time of its appearance.

"Sicily as it was and is," gives an outline of the vicisitudes of that unfortunate island from the origin of its constitution in the grant of the Norman Count Roger towards the end of the 11th century down to the present time. The *independent* existence of Sicily during a large portion of this period will be a surprise to some readers, who have associated it inseparably with the fortunes of Naples. The writer calls attention to the assumption by the Neapolitan Prince at the Congress of Vienna of the new title of "King of *the Kingdom* of the Two Sicilies," instead of his old and lawful title of "King of the Two Sicilies." This assumption implied of course the *consolidation* of the two Kingdoms, and the suppression of the separate and independent Government of the island of Sicily. The expression—"the Two Sicilies"—originated, as the reviewer points out, in the habit of old writers of designating the continental possessions of the family of Count Roger (Apulia and Capua) as "Sicily beyond the Straits." The title of "King of the Two Sicilies" was assumed by Charles of Bourbon in 1735. The reviewer is very unsparing in his denunciation of what he considers to have been English treachery to the Sicilians in the matter of the Bentinck constitution of 1812, and the last national struggle which ended in the entire destruction of their liberties. Without passing an opinion on an *ex parte* statement such as this, there can be little doubt that the policy of England has been far from dignified or consistent in the affairs of Sicily. The epithets bestowed by the Sicilians on Lord William Bentinck and Sir William A'Court (afterwards Lord Heytesbury) of "William the *Good*" and "William the *Bad*," in themselves point to something like tergiversation in English diplomacy. The more recent charge against a Liberal Government demands further inquiry, which the course of events will probably bring about.

The article on "Christian Revivals" has a certain theological aspect with which we will not meddle. The writer takes a disparaging view of the Revivalist movement, and meets the phenomena of "conversion" by an array of curious facts, illustrating the "power of the mind over the body" on comparatively ordinary occasions. Acknowledging the immediate results of the movement in the decrease of immorality and crime, the writer doubts the continued operation of such agencies, and concludes that "at best any balance of benefit derivable from 'Revivals' must always be both questionable and small."

The paper "Italy: the Designs of Louis Napoleon," is of questionable value. It is evidently of foreign origin, either directly or through the medium of an indifferent translation, for the *English* composition is far from unexceptionable. The writer professes to give us a *resumé* of the secret meditations of the Emperor of the French during the past year, and is inclined to be prophetic as to his intentions for the future. Those who like to indulge in such speculations will find a congenial spirit in the reviewer.

THE UNIVERSAL REVIEW. January, 1860. Wm. H. Allen and Co.
THE DUBLIN UNIVERSITY MAGAZINE. January, 1860. Hurst and Blackett.

THERE are few articles in the "Universal Review" for this month deserving of more than the briefest notice. That on "The Depression of the Shipping Interest and its Proposed Remedies" is of some value as a careful investigation, conducted in a liberal spirit of free trade. "The National Money Box" is a rather interesting account of the rise and early history of the Royal Exchequer. Biography is, on the whole, the favourite subject. Dr Doran gossips after his usual fashion in illustration of the life of "George Rose." Mrs Schimmelpenninck is treated in a more laudatory and lengthy manner than her real talents and excellencies call for. Richard Brinsley Sheridan and Lord Dundonald are two pieces of fair biographical criticism. Politics occupy the few remaining pages (passing over a tale whose opening does not promise much for this department of the Review).

"Political Reveries" is a fit name for the rambling talk whose vagueness is rather its merit, since it serves to conceal in part sentiments as unworthy, and comparisons as absurd, as the following:—"In any case we may be certain that it is a false and presumptuous policy which pretends to secure the interests of the third and fourth generations of them who are to come after us. Never was there a greater mistake than when a Whig Ministry alienated Russia from her old ally. Sir Hamilton Seymour and his colleagues have been quite sufficiently belauded for their conscientious refusal to participate in the spoils of the Ottoman Empire. A great parade was made at that time of the incorruptibility of a British Government, and of the stern sense of honour which presides at the councils of the nation. And yet, in less than three years from that date, there was no hesitation about smothering another 'sick man.'" The cases of Oude and of Turkey are, in the reviewer's opinion, precisely similar! He goes on to regret that such another opportunity for "annexing" Egypt and Crete may not again occur, but consoles us ironically with the thought that "if we did flout the advances of a propitious Fortune because she was not attired as a Doctor of Geneva, we took care to indemnify ourselves in a small way by swallowing another Mahomedan kingdom at a gulp."

The current number of the "Dublin University Magazine" is more than usually successful. The leading political article, "On the Improbability of War with France," is worth attention from its careful review of facts, and from the arguments it brings to bear on that side of a much-vexed question. One observation strikes us as true and forcible. "His (Louis Napoleon's) object is to make his authority predominant in the Italian Peninsula; and there can be little doubt that his present quarrel with Great Britain arises from his soreness that *her neutrality is slowly enabling the accomplishment of a liberation his interference was not calculated to promote.*" The italics are the reviewer's own, not ours. A review of Michiel's "Secret History of the Austrian Government" is full of interest. "The Life and Times of Edmund Burke" are followed down to 1766 in a very readable article. "A Rainy Day with Tennyson and our Poets" is an agreeable bit

of (on the whole) just poetical criticism. In "W. M. Thackeray, Satirist and Humourist," the writing and critical ability is not up to the mark of the chosen subject. "The Czar and the Sceptic," an amusing extravaganza, and "The Season Ticket," are the best among the lighter pieces.

THE LONDON REVIEW. January. Alexander Heylin, 28 Paternoster row.

RELIGIOUS topics and literature of the more solid kind characterise this Review. The opening number for this year, however, is marked by a less exclusive spirit in the choice and treatment of a wider range of subjects than has always been the case hitherto. The article on "Children's Literature" especially is noticeable as showing that less strict and artificial notions of education are beginning to prevail over the rigid ideas of older evangelical teaching. It is, moreover, very pleasant to read, from the cordial insight and kindly sympathy it displays into and with childish nature and childish likings. "The Ethnology and Literature of Cornwall" is a paper worth reading, from its judicious treatment of a curious subject. "Social Changes in Russia" gives a well-drawn picture of the remarkable communistic form of society among the lower classes in Russia. In "Aspects of American Slavery," we have some more contributions to the painful and repulsive features of slavery, even in its milder forms. "Dr Cumming on the Great Tribulation" has a greater amount of grave disproof expended upon him than his mendacious and senseless vaticinations deserve; but the writer seems to feel more strongly than he cares to express. "The Recent Religious Revivals" in Ireland are stoutly defended in the concluding article. Those who wish to hear what may be said on that side of a much-discussed question, and what facts can be adduced in behalf of their genuineness and workings for good, cannot do better than read the article called by their name in the "London Review."

THE ART-JOURNAL. January, 1860. Arthur Hall, Virtue, and Co.

ENGRAVINGS FROM WORKS OF DECEASED BRITISH ARTISTS. By W. J. LINTON.

THE present number of the "Art-Journal" is unusually rich in illustrations, and they are all of more than average interest. The steel engravings give us "The Lady Constance," by Winterhalter,—a subject which has afforded full scope to the peculiar merits of the great Court artist; "Una," by Frost; and "Bearing the Cross," by Raphael. Besides the illustrations of South Wales by Mr and Mrs S. C. Hall, we have a chapter, with wood-cuts, giving some views of the Hudson by Benson J. Lossing; another continuing the series of "Rome, and her Works of Art"; a third, entitled "The Hermits and Recluses of the Middle Ages," containing copies of some illustrations of mediæval manuscripts; a fifth, bearing the practical title of "Tablets for Street Corners"; and a sixth, "Early Domestic Architecture in England," the continuation of which is much to be desired. Mr Parker's beautiful volumes have introduced this subject to the few within whose reach they come; but a more general knowledge of this interesting branch of architecture would be a great artistic gain, and of some practical use.

The volume of engravings above mentioned contains 30 thoroughly well-executed wood-cuts of well-known English pictures. They have been expressly engraved for the Art-Union of London. We are not informed whether the present is to be the beginning of a series of such volumes; but we cannot but think that a yearly publication of the kind,—at the present-giving season of the new year,—would be very acceptable to the public.

The highest price of the Three per Cents. was in January; the lowest in May, when the war with Austria was definitively decided on. The new loan which was launched in May was at its lowest price in June, and at its highest in December. The Bank of France, the Credit Mobilier, and other financial establishments, were highest in January and lowest in May. The same was the case with most of the railway and other securities, but some of the railways attained their highest figure in December.

The railway companies have drawn up an account of their year's receipts for last year compared with those of the year preceding. It is not, I understand, quite accurate; but it will give a good idea of the results attained by the year's operations. It will be observed that, on the whole, it is more satisfactory than from the war might have been expected.

	1859. f	c		1858. f	c

The disastrous settlement for the operations of December having been got through, and a more hopeful view being (on account of the good understanding between England and France) taken of the political situation, the Bourse quotations have improved. To-day rumours of various kinds, all of a more or less favourable character, have been current:—one of them is of the "important if true" category:—it is that a commercial treaty in a very liberal spirit is about to be negociated between England and France. The following are the quotations:—

	Thursday, Jan. 5. f	c		Thursday, Jan. 12. f	c

The operations of the Savings Bank at Paris in the course of last year were not very remarkable in any respect. The amount of new deposits was 24,338,729f, and that of withdrawals 22,127,220f. The number of depositors, which at the beginning of the year was 231,647, was 236,720 at the end; and the total amount held by the Bank was at the beginning of the year 48,183,000f, and at the end 48,668,246f.

Some time back the butcher's trade of Paris, which had for a number of yearsbeen a close monopoly, was thrown open, in spite of the vehement opposition of the butchers. The prediction was then made that the supply of live stock to the Paris markets would decline, and that consequently the price of meat would increase. But, as always happens, liberty of commerce has proved to be advantageous to the public, as the following table of the sales of live stock and prices will show:—

	1859		1858		1857	
	No.	Average price per kilog. f c	No.	Average price per kilog. f c	No.	Average price per kilog. f c
Oxen	207350	1 23	206778	1 24	203393	1 39
Cows	40421	1 8	32527	1 4	27963	1 11
Calves	58855	1 59	62854	1 53	62506	1 62
Sheep	1290340	1 46	1316002	1 39	1250326	1 21

A grand agricultural show of live stock, and of agricultural productions and implementa, is to be held at Paris in the course of the present year; but it is to be confined exclusively to French productions, and the date of it has not yet been fixed.

According to a document just published at Havre, the number of French and foreign vessels which entered that port in the course of last year was 6,185, and the tonnage of them was 953,295; the number which sailed 6,222, of 984,970 tons. The entries were less than those of 1848 by 487 vessels and 97,170 tons; and the clearings less by 302 vessels and 17,608 tons.

Subjoined is the weekly account of the markets:—

Flour.—Business, at Paris, during the past week has not been very active. Yesterday, the ordinary qualities were 52f to 54f the sack of 159 kilogs (sack included); good sorts, 55f to 56f; superior, 57f to 58f; the secondary qualities were from 32f to 48f. The four marks were done for the month at 57f 25c and 57f 50c; for February, 58f; and for March and April, 59f 50c.

Wheat.—At *Paris*, yesterday, prices were firm, and in some lots of a superior quality there was a slight advance. The quotations were 30f 50c to 32f for good qualities the sack of 120 kilogs; 29f 50c to 30f ordinary sorts. Of the provincial markets, 28 present a rise of from 10c to 75c the hectolitre, 48 a fall of from 10c to 1f, and 48 have remained unchanged.

Cotton.—The sales at *Havre*, in the week ending Friday, amounted to 6,298 bales, and the importations to 28,637. The closing prices of the week left low New Orleans unchanged at 103f the 50 kilogs, and very ordinary ditto at 108f. This week the market has been calm, and prices have had a downward tendency. Yesterday, low New Orleans was at 102f to 102f 50c.

Coffee.—The demand at *Havre*, in the week ending Friday, was active, and prices improved. Of Hayti, of which the supply was small, 670 sacks went at 73f to 74f the 50 kilogs in bond; 231 sacks Gonaives, 75f; 2,300 sacks Port-au-Prince, 71f 50c to 72f 50c; 60 sacks Cape, 74f; 2,220 sacks Rio, not washed, 70f to 73f 50c; 98 sacks ditto, washed, 86f; 107 sacks Santos, 75f to 77f; 1,000 sacks Mexico, 77f; 100 Pedang, 133f 50c duty paid; 100 Manilla, 130f; and 5,200 Ceylon, 122f to 126f. The arrivals of the week exceeded 6,300 sacks. This week a fair amount of business has been transacted: Rio, washed, 84f 50c in bond; Ceylon native, 123f; Hayti, 73f 50c: Rio, not washed, 73f; Maracaibo, 75f; Manilla, 129f duty paid. At *Bordeaux*, last week, nothing was done, and prices remained nominally unchanged. This week, business has been calm, and no quotations have been given. At *Nantes*, last week, the sole transaction was the sale of about 6,000 sacks Java, recorded in last week's Economist, but the price is not stated. Nothing done this week. At *Marseilles*, last week, about 5,000 Rio went at from 71f to 75f in bond.

Sugar.—At *Havre*, in the week ending Friday, about 1,200 hogsheads of French West India went at 59f to 60f the 50 kilogs duty paid; 30 ditto "usine," at 60f to 63f; 10,000 bales Reunion, 63f; 671 casks Havana, 36f 75c in bond; 8,000 sacks Mauritius, 65f 50c. The arrivals were 234 casks French West India, 1,010 casks Havana, and some small lots of other sorts. This week, very little business has been done: Havana has been at 37f. At *Nantes*, last week, some large sales of Reunion (one of them was of 6,700 bales) took place at 62f 50c to 63f 50c. French West India was at 59f 50c to 60f. Nothing done this week. At *Bordeaux*, last week, a small lot of French West India was sold at 59f, and 3,775 bales Mauritius went at 63f 25c in bond. In Reunion nothing was done, and the nominal price was 63f. This week, Reunion has been in demand at 62f to 62f 25c; Mauritius at 65f. At *Marseilles*, last week, 8,000 bales Reunion were sold, but the price is not stated.

Indigo, at *Havre*, in the week ending Friday, was calm, the sole sales having been 17 cases Bengal at prices kept secret, and there having been no arrivals. This week, there have been several sales, part at a premium of 40c to 50c, part at prices kept secret. At *Bordeaux*, this week, there have been two small sales, but prices are not stated.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was at 90f the hectolitre; Montpellier of 86 deg, at 130f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f.

Tallow.—At *Havre*, last week, nothing was doing, and the same has been the case this week. At *Paris*, yesterday, prices remained unchanged—133f 20c the 100 kilogs within the walls, 126f outside. At *Marseilles*, last week, there was no demand, and prices were nominally 125f to 136f the 130 kilogs, according to quality, in bond; Algeria, 130f.

Hides.—The sales at *Havre*, in the week ending Friday, were 8,000 La Plata at 145f to 161f the 50 kilogs duty paid; 800 ditto salted cow, 85f; 1,267 Rio Janeiro salted, 69f; 200 Australia ditto, 60f; 1,000 New York salted, 63f; 183 horse salted, Buenos Ayres, 15f 50c each duty paid. The arrivals of the week were about 30,000. The total importations in 1859 were 526,850, and the total sales 698,578. But little business has been done this week. Buenos Ayres dry have been at 150f to 155f.

Wool, at *Havre*, in the week ending Friday, was not very active the sales were 60 bales. Buenos Ayres unwashed at 1f 85c to 2f 30c the kilog in bond, and 24 bales of sheep and lambs' skins at 1f to 1f 80c. The arrivals of the week were very nearly 2,500 bales. This week, Buenos Ayres unwashed has been at 1f 35c to 2f 45c in bond.

Antwerp, Jan. 11.

The number of vessels which entered this port in the course of last year was 2,306, and their tonnage 459,041. The number which sailed with cargoes was 1,642, but the tonnage is not given; and there were, in addition 577 which sailed in ballast. Of the total which entered, 771 were English, and they were of 153,467 tons; and of the total which sailed in cargo and in ballast 745 were English. No other country, not even Belgium herself, had half as many vessels entering and leaving as the English. This fact is worthy of the serious consideration of the English shipowners who are clamouring for a modification of the navigation laws.

The Chamber of Commerce of Rotterdam, in imitation of those of Bremen, Hamburg, Frankfort, Antwerp, &c., have adopted resolutions in favour of the inviolability of private property at sea in time of war.

St Petersburg, Jan. 1.

In consequence of statements that have been made in certain foreign journals as to the amount of the debt of Russia, the Government has had an account of what it really owes prepared; and according to this document the debt, consolidated and floating, is 1,463,608,534 roubles, about 234,000,000*l* sterling. As this calculation is made by the Government, we may be sure that it is not exaggerated; but the amount is very large for a poor country like Russia.

The project for constructing a commercial port at the mouth of the Neva is beginning to assume a serious aspect. A company, headed by some persons of influence, has submitted to the Government plans for the construction of the port at the left bank of the southern mouth of the river; for building a town near the port, and for uniting port and town, with St Petersburg by railway. The company asks for the gratuitous concession of the ground it will require, and of the custom houses and other buildings at St Petersburg and Cronstadt; also of the power of levying tonnage and other dues; but it does not require any subvention in money. It calculates that the expense of executing its plans will be rather more than 3,000,000*l* sterling. The projected port would be of vast utility.

COMMERCIAL AND MISCELLANEOUS NEWS.

The commercial accounts from New York this week do not hold out the prospect of any immediate return of the rate of exchange to a point that would lead to a renewal of gold shipments to this country. With regard to general business there was no new feature. The tendency of the various banks to extend their liabilities without a proper increase in their stocks of specie continued to attract attention, but there was nothing to create fear of a necessity for any sharp or sudden contraction.

The *Sydney Empire*, of the 12th Nov., says:—"Our stocks of articles of *bona fide* daily consumption are far from heavy, and we do not hear of excessive shipments being on the way, but the demand is so very limited that no sales of any importance have been made, except in eastern produce. The only way in which we can account for the present state of trade, is owing to the reaction from overtrading, and the very unsettled and unsatisfactory state of the money market. All the neighbouring colonies are suffering more severely than we are from these causes, and it is apparent to every one that the extreme stringency of the banks is caused far more from their overtrading than from the necessity of the times.

Advices from Victoria to the 23d of November report a steamer had arrived there from New Westminster with about 100,000 dols in gold. The passengers give a flattering account of the Upper Fraser river diggings, but the prospect of a severe winter was causing the entire abandonment of that region till spring. Lower Fraser river was free of ice, and the miners were disposed to remain during the winter.

Advices from Calcutta to the 9th ult. state that money was in demand, but without change in discounts. The import trade was very dull.

According to a statement just prepared, the importation of coal, seaborne and by railways and canals, into London during the year 1859 was,—seaborne, 10,693 ships, 3,299,170 tons; railway, 1,191,169 tons; and canal, 16,964; making the total 4,507,303 tons. These figures show an increase of 32,724 tons, or about 1 per cent., seaborne, and 648 tons by rail (a merely fractional per centage); and a decrease of 3,260 tons, or 16 per cent., by canal.

The half-year's returns of the leading lines of Irish railway being now completed, we give the comparative figures. They show in every case an increase:—

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 11th day of January, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	30,002,060	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	15,527,060
		Silver Bullion	...
	30,002,060		30,002,060

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,963,822
Rest	3,250,728	Other Securities	19,892,930
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5,564,925	Notes	8,170,740
Other Deposits	15,543,469	Gold and Silver Coin	697,069
Seven Day and other Bills	812,439		
	39,724,561		39,724,561

Dated the 12th January, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,643,759	Securities	30,778,752
Public Deposits	5,564,925	Coin and Bullion	16,224,129
Private Deposits	15,543,469		
	43,752,153		47,002,881

The balance of Assets above Liabilities being 3,250,728*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£23,069
A DECREASE of Public Deposits of	3,594,631
An INCREASE of Other Deposits of	2,134,142
An INCREASE of Government Securities of	40,040
A DECREASE of Other Securities of	1,199,979
A DECREASE of Bullion of	236,695
An INCREASE of Rest of	40,786
A DECREASE of Reserve of	242,920

The drain upon the Bank, occasioned by the payment of the dividends, was to a considerable extent neutralised by the large addition to the private deposits and by the expiration of the advances on "other" securities. The falling off in the reserve is, consequently, very moderate. The decrease in the bullion is likewise not of importance.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,241,909	£ 20,273,450	£ 20,555,608	£ 21,918,700	£ 22,643,759
Public deposits	5,974,800	3,705,379	2,986,996	5,518,742	5,564,925
Other deposits	11,241,118	10,644,674	19,124,733	15,725,808	15,543,469
Government securities	14,296,554	11,513,161	9,191,986	10,698,807	10,963,822
Other securities	10,099,051	16,342,612	23,849,662	16,564,194	19,892,930

— Hamburg (3months)	13 12	13 5½ 6	13 6	13 6	13 4½ 5

At the corresponding period of the year 1850, the Pope, who had not yet returned to Rome, had issued an encyclical letter against Socialism and Republicanism. An Imperial ordinance had made its appearance at Vienna, which alluded, in terms of gratitude, to the assistance rendered to the Austrian Empire by Russia, and notified a reduction in the Austrian army. Owing to the unwillingness of the King of Prussia to swear to the Constitution, Count Brandenburg and his colleagues in the Ministry had sent in their resignation. Piedmont had just announced a new loan. The advisability of despatching an expedition against Rosas, the Dictator of Buenos Ayres, was under agitation in the French Assembly. Preparations for the Great London Exhibition of 1851 were in progress abroad. At home, Protectionist meetings were being held in the provinces. Mr Cobden was also on a tour of agitation in furtherance of the objects of the Parliamentary and Financial Reform Association. In nearly all quarters, money was extremely abundant and cheap, and, notwithstanding the existence of many elements of trouble on the Continent, Consols commanded 97½.

In 1857, the China war was going on: Canton had been bombarded. The dispute with Russia with reference to the Bessarabian frontier was regarded as settled, and so was the Neufchâtel difficulty between Prussia and Switzerland; but the tendency to improvement in the funds was checked by the tightness in the money market. The January dividends had been so largely "discounted", that very heavy repayments of advances had to be made to the Bank (the "other securities" declining three millions in a week); and the decrease in the reserve in the dividend week was therefore limited to 200,000*l*. The Bank of England had notified their intention of charging for loans on Government securities 6½ per cent., being ½ per cent. in excess of their *minimum* rate of discount. The Great Indian Peninsula Railway Company had issued proposals for two millions more capital. The Grand Russian Railways were shortly expected. The participators in the great bullion robbery on the South-Eastern Railway were under trial.

In 1858, attention was directed to the story of the defence of Lucknow and to the reverse sustained by General Wyndham. The proposed transfer of the governing powers of the East India Company to the Crown was under agitation. The Bank of England rate of discount had been lowered from 6 to 5 per cent. In the open market, the best bills were discounted at 4. The Bank return for the dividend week showed a decrease of 1,811,404*l* in the "other" securities, and an absolute increase of half a million in the reserve; although the Bank had redeemed from the Stock Exchange and elsewhere Government securities to the amount of no less than 1,426,677*l*, upon which they had obtained loans during the crisis of the previous autumn. At Hamburg the rate of discount had already fallen to 2½ per cent.

In 1859, the world was startled by the bold bid for the suffrages of the Italian revolutionary party contained in the speech of the King of Sardinia at the opening of the Chambers. Austria was pouring troops into Lombardy, to strengthen her garrisons. Great agitation prevailed in the stock markets throughout Europe. The French 3 per Cents. had fallen no less than 5 per cent. within eleven days, being quoted 68½, whilst the fall in Consols amounted to 1½ per cent. Immense losses had been sustained at Paris, where the connection between the Bourse and the Court excited general disgust. The discount on the new Chilian, Turkish, and Brazilian loans varied from 2 to 4 per cent. Lombardo-Venetian Railway shares had fallen to ¼ premium. The decrease in the Bank's reserve in the dividend week was only 151,214*l*, the "other" securities having decreased 1,645,548*l*.

The amounts of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,142,067*l*; and in 1857, a deficiency of 5,697,238*l*; in 1858, a deficiency of 4,724,929*l*; and in 1859, a deficiency of 838,386*l*. In 1860, the deficiency is 4,349,461*l*.

As was anticipated, the payment of the dividends has been followed by a subsidence of the pressure in the money market. The demand in commercial channels has continued active, the general rate for choice bills being 2⅜ to 2½ per cent.; but at the Bank business has relapsed into a moderate compass. Throughout the week, the repayment of advances made by that establishment during the shutting of the transfer books has been in progress.

On Saturday last, 32,000*l* in gold was taken from the Bank for exportation; on Monday, 13,000*l*; on Tuesday, 20,000*l*; on Wednesday, 16,000*l*; on Thursday, 14,000*l*; and this day, 13,000*l*; making a total of 108,000*l* since the date of our last impression. These daily withdrawals occasioned a rumour in the Stock Exchange that the Bank rate of discount might perhaps be raised yesterday to 3 per cent. The drain is as yet very moderate, and the Bank directors are not in the habit of acting upon light grounds. The prospect, however, of a moderate advance in the value of money at no distant period remains. The immediate features are the continued demand for gold for the Continent and for exportation to India, and the absence of fresh supplies. No remittances are to be looked for yet from Australia. The Water Nymph, with 136,000*l*, has been at sea 71 days; the Sussex, with 71,000*l*, 70 days; the Donald McKay, with 148,000*l*, 65 days; and the Commodore Perry, with 58,000*l*, 58 days. The New York ex-

change has lately experienced a movement adverse to this country, the money market there having become somewhat tighter; and the result has been almost a cessation of remittances of specie to this side. The Delta, which left Southampton yesterday, took as much as 436,002*l* in specie, of which 282,010*l* was in silver, and the unusually large sum of 112,750*l* in gold, for Bombay, besides 40,542*l* in gold for Alexandria. The whole is on mercantile account.

The continental exchanges this week are rather less favourable for this country. The Austrian exchanges, however, continue to rise, indicating continued distrust.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—The amount of gold that has arrived during the past week has been but small, and as the demand is still active, several sums have been withdrawn from the Bank of England, amounting since the date of our last (5th January,) to 103,000*l*. The arrivals have been the Athenian, from the coast of Africa, with 16,000*l*; and the Pera, with the Australian mail, and 13,662*l* in gold; these amounts have also been taken for exportation. The following vessels are now on the way from Australia;—The Water Nymph, with 136,000*l*, out 70 days; the Sussex, 71,000*l*, out 69 days; the Donald McKay, 148,000*l*, out 64 days; the Commodore Perry, 58,000*l*, out 57 days; making a total of 413,000*l*.

Silver.—The demand for bar silver during the past week has been rather active; there have been some large amounts imported from the Continent, and we quote the price as 62⅝d per oz standard. The Oneida has taken 24,000*l* to the Brazils.

Mexican dollars have been in good demand at gradually rising prices: we give the last price at 62¼d, and do not think that any could now be obtained, excepting at an increased quotation.

Exchange remains without alteration since our last. We quote 60 day bills on Calcutta and Bombay 2s 0⅛d to 2s 0⅜d. Madras nominal as before.

India Government Loan Notes sell steadily. We quote prices for 5½ per Cents. 2s 0⅞d to 2s 1d. 5 per Cents. are scarce, and are in demand at 1s 11⅛d to 1s 11⅜d.

Quotations for Bullion.—Gold—Bar gold, 77s 9½d per oz std; bar gold, fine, 78s per oz std; bar gold refinable, 78s 1d per oz std, last price; South American doubloons, 75s per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2⅛d per oz std; bar silverr, containing 5 grs gold, 5s 2⅜d per oz std; Spanish dollars (Carolus), 5s to 5s 3d per oz, last price; five-franc pieces, 5s 0⅛d per oz.

The Indian 5 per Cent. "enfaced" rupee paper was quoted this afternoon 96⅞ to 97⅛, and the 5½ per Cents. 103¾ to 104. Investments continue to be made, and no inconsiderable amount of these securities is absorbed by the banking interest, either absolutely or as security for loans. The rupee paper is now very easily dealt in, even in large amounts, and it possesses the advantage that the accrued interest, like that upon Exchequer bills, is paid to the seller up to the very day of delivery. Meanwhile, each mail from India speaks of returning confidence in financial circles, and of higher prices for Government securities. Subscriptions to the 5½ per Cent. Loan were flowing in freely at the date of the last advices. Holders may either have the paper in the form (so to speak) of "to bearer," and transferable by endorsement; or, for security, may have it registered at the India Office, and transferable by inscription. The latter course involves the necessity of a stamp on transfer.

The monthly return of the Bank of France, extending to Thursday, the 12th January (yesterday), shows the following changes, viz.:—Coin and bullion—decrease, 1,800,000*l*; bills discounted—increase, 1,800,000*l*; notes in circulation—increase, 2,760,000*l*; Treasury deposits—increase, 1,160,000*l*; private deposits—increase, 320,000*l*; advances on public securities—increase, 80,000*l*. These changes denote more activity in trading circles. The decrease in the bullion is heavy, but is not an absolutely unfavourable feature, considering that the Bank still hold upwards of 21,000,000*l* sterling.

It is announced that in April next another 3,000,000*l* of Victoria Government 6 per Cent. Debentures, created for railway purposes, will be placed upon this market.

There has been a great rush for the new Canadian 5 per Cent. Loan of 2,800,000*l*, offered through Messrs Baring Brothers and Co. No less than 22,000,000*l* is understood to have been written for. Each subscriber seems to have applied for a far larger amount than he expected to get, with a view to allow an ample margin for cutting down. The circumstance that no deposit was required had, doubtless, a tendency to stimulate applications, but must also have contributed to relieve the agents for the loan, who, having taken no money from anybody, have been in a position to exercise full discrimination in the allotment. The letters were distributed this morning, and it is generally conceded that the apportionment has been made very fairly. Of course, in face of the enormous subscriptions, it was not possible for the agents to do more than meet a tithe of the demands. The price of the loan has been as high as 3⅛ to 3⅜ prem. The closing quotation this afternoon was 2½ to 2¾ prem., being the same as that of yesterday. It is not often that the price of a new stock is so firm on the day of allotment.

The first instalment of 10 per cent. is to be paid on the Canadian Loan on Monday next, and will require 280,000*l*.

The "Rio de Janeiro Drainage Company, Limited," is announced. The capital to be raised is 650,000*l*, in shares of 20*l* each. The main features of the undertaking are the payment to the Company, by the Brazilian Government, of a fixed annual drainage rate for 90 years, estimated to be sufficient to pay 8½ per cent. per annum upon the capital; and the conclusion of a contract with a respectable firm, who undertake to construct the works and maintain and work them for 21 years, at a price within the capital. Interest at the rate of 7 per cent. per annum is to be paid during their construction.

The prices for the shares in new projects this afternoon were as follows;—Ocean Marine Insurance, 1 3-16 to 1 5-16 prem.; Universal Marine Insurance, ⅛ dis. to par; San Paulo (Brazilian) Railway, ¼ to ⅛ dis.; Bank of Turkey, ¼ to ⅛ dis.; Rio de Janeiro Drainage, ⅛ to ¼ prem.; and City of London Brewery Preference shares, ¼ te ⅜ prem.

The half-yearly meeting of shareholders in the Union Bank of London was held on Wednesday. The net profits for the six months were stated at 60,003*l*, inclusive of 122*l* brought forward. A dividend for the half-year, at the rate of 10 per cent. per annum, and a bonus of 2½ per cent., were declared, being together at the rate of 15 per cent. per annum, clear of income tax. These payments will absorb 54,000*l*, leaving a balance of 6,003*l* to be carried forward.

At the meeting of the proprietors of the Union Bank of Australia, on the 16th instant, the directors will recommend a dividend of 2*l* per share, being at the rate of 16 per cent. per annum.

The report of the directors of the Australian Agricultural Company, issued this day, recommends a dividend of 1*l* per share.

Another commercial undertaking connected with the colonies has been started under most respectable auspices. Its title is the "London and Colonial Company, Limited," with a capital of 150,000*l*, to be raised in shares of two classes of 100*l* each. It is proposed to undertake the business of hop merchants, warehouse-keepers, maltsters, and coopers; and also to supply colonial and other markets with London stout and Burton ale, &c. The company appears to start with excellent prospects.

The failure has been announced this week of Messrs Church and Sons, wholesale grocers, of Eastcheap, whose liabilities are estimated at about 45,000*l*, whilst the assets are probably considerable; and Messrs E. J. Wheeler, and Co., Australian merchants, of Cullum street, who owe some 30,000*l* or 40,000*l*.

Messrs Da Costa, De Brath and Co., Brazil and Plate merchants, who stopped in November last, have announced their readiness to meet their liabilities in full, with 5 per cent. interest.

At Paris, to-day (Friday), the closing quotations of the Bourse were as follows:—3 per Cent. Rentes, for money, 68.90; ditto, for account, 68.90; ditto, 4½ per Cents., 96.95; Bank of France shares, 2,820. The 3 per Cents. are ⅛ to ¼ per cent. higher than yesterday afternoon, and ⅜ to ½ per cent. higher than on last Friday. From the movement of the market it may be inferred that the struggle between the French Emperor and the Pope does not trouble the financial world.

The English funds have been dull and rather flat. A reduction of ¼ per cent. has taken place since last Friday. Consols closed this afternoon at 95⅛ to ¼ for money, and 95¼ to ⅜ for the 8th of February. The transactions have presented no feature of striking interest. The monthly settlement, which was fixed for Tuesday, showed a very limited supply of stock; and the quotation of Consols was consequently only ⅛ per cent. higher for delivery in February than for cash. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing

prices of the principal English and foreign stocks last Friday and this day :—

The market for British railway stocks has been weaker, owing to a number of speculative realisations, coupled with a subsidence of the late demand. Eastern Counties Railway stock is prominently heavy, and has fallen 1½ per cent. York and North Midland has also declined 1¼ per cent.; North British and Berwick, 1 per cent.; Great Western, Lancashire and Yorkshire, London and North-Western, Midland and South-Eastern, ¾ per cent.; London and South-Western, ½ per cent.; and Caledonian, ¼ per cent. *Bonâ fide* holders, however, do not sell, now that the dividends are so near; and the increase in the traffic continues. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 109⅜ to 109½ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a limited supply of English wheat was on offer at Mark lane, to-day. For good and fine samples there was a fair demand at full prices; but damp qualities were a slow inquiry. Foreign wheat was in moderate request at fully previous rates. Although over 18,000 quarters have come to hand from all sources, the barley trade was firm at extreme currencies. Beans were dull, and 1s per quarter cheaper. In the value of other produce no change took place. The week's imports are 2,530 quarters of wheat, 9,110 barley, 19,160 oats, and 10 sacks of flour.

At Liverpool, this morning, the grain trade was somewhat heavy.

The sales of the week in the Liverpool cotton market have amounted to 76,000 bales, of which spinners have taken 60,500 bales, speculators 5,000, and exporters 10,500 bales. Quotations for some descriptions are the same as on Friday last, whereas for others in which the supply is very abundant a decline of fully ⅛d to 3-16d per lb upon the prices of Friday last has taken place. The market to-day closes with a steady appearance: sales quite 8,000 bales, but no improvement in prices,—the quality offering freely is too large. In the London market there has been rather more business doing this week: the sales are 1,650 bales at about previous rates.

Bombay advices to the 12th ult., state that a full average business was doing in cotton, at a further advance of from 3 to 4 rupees, and that the stocks were chiefly composed of inferior quality. The sales for the previous fortnight amounted to about 10,000 candies. Messrs Briggs and Co., of Alexandria, writing on the 26th December, state that the cotton market was very firm, at extreme quotations. They intimate further, that, owing to the low state of the Nile and its rapid decline, the crop was likely to turn out considerably less than last year.

Notwithstanding that the shipments from China to this country show an increase of 21,000,000 lbs, compared with last year, tea has continued in sterdy request, at very full prices, and the show of samples has not increased.

IMPORT of TEA during the Years 1858 and 1859, and the STOCK on hand on the 1st January, 1860, compared with the corresponding date in 1859.

The following report, in reference to tea and silk, is dated Hong Kong, Nov. 30:—

TEA.—During the past fortnight transactions have been very limited, owing to the teamen being unwilling to make any concession in their demands. It is generally asserted that there are only 20 to 30 chops more to arrive, and, as supplies now come in very slowly, the operations for the remainder of the season are likely to be very small. Settlements have been 8 chops at 25 to 26 taels for blackish leaf, and 27 to 39½ taels for oopacks. Foochow dates are to the 19th instant. Tea—A good business had been done at firm rates during the fortnight; and on the above date, previous to the departure of the steamer, we hear of considerable purchases (particulars not yet received), which had established an advance of 2 to 3 taels on prices of medium to good congou. Total arrivals and sales to date are—Congou, 307,250 chests, against 120,920 chests last year; Oolong, 174,600 half-chests, against 112,780 half-chests last year. Sales—Congou, 232,300 chests, against 109,220 chests last year; Oolong, 145,400 half-chests, against 106,740 half-chests last year. Sales from the 4th instant comprise—Congou, 23,750 chests, from 8.5 taels for low chaffy dust, to 22.5 taels for fair medium. The chief business has been for England, at 13 to 20 taels, short. Shanghai advices are to the 23rd inst. Silk—3,000 bales settled during the fortnight. Prices have declined 10 to 15 taels for Taatlees, 5 taels for Taysaams, and 20 taels for throwns. Total settlements since 1st July, 34,000 bales. Stock, 10,000 bales. Tea—After the departure of last mail considerable settlements were made in black tea owing to a slight decline in prices of common and medium kinds, but the arrival of the mail with news from England to 27th September, induced teamen to ask such exorbitant rates as to almost stop business. Prices are now fully 4 taels above those last quoted. Settlements, 55,000 half-chests. Stocks, black, 35,000 chests; green, 95,000 half-chests. The total export from China to Great Britain is 40,592,000 lbs, against to same time last year 19,586,000 lbs, or an increase of 21,006,000 lbs for the season. To the United States the export is 16,371,800 lbs, against 12,528,100 lbs last year, or an increase for 1859-60 of 3,843,700 lbs.

In the sugar market, a full business has been passing, and, in some instances, the quotations have exhibited an improving tendency. Refined goods have commanded full prices.

Somewhat large public sales of coffee have been held. However, dealers have purchased somewhat freely, at fully late rates.

Messrs Heale and Co., of Columbo, report the state of the coffee market to the 26th, as follows:—

The weather having been favourable during the fortnight, there has been somewhat more activity in shipping operations, as shown in the following table:—

PLANTATION COFFEE.

To Great Britain	cwts 52,581	against last year,	cwts	29,285
Foreign Ports	1,262	—	—	1,694
Australia and India	2,627	—	—	2,870
	56,470			33,849

NATIVE COFFEE.

To Great Britain	cwts 26,200	against last year,	cwts	9,028
Foreign Ports	7,162	—	—	16,032
Australia and India	293	—	—	500
	33,655			25,560

Our market has continued rather sparingly supplied with native coffee which has tended to maintain the value of the article at nearly our previous quotations, in the face of an absence of any active demand on the part of exporters. There has been but few purchases of plantation in parchment since our last, and these have been made at about former rates. One or two parcels of picked and packed have changed hands at 58s and 60s for high-grown coffee.

Although a Government contract has been announced, cocoa bas changed hands slowly, at about previous currencies.

The rice market has continued in a healthy state, at full prices.

We have very little change to notice in the value of silk. Writing on the 9th inst., M. Arles Dufour and Co., of Lyons, thus refer to the trade:—

Notwithstanding the war which disturbed Europe in 1859, the genera consumption of silk has decreased but slightly, and, after a well-sustained upward tendency, prices close about 10 per cent. higher than at the same period last year. This continual advance of prices, even during the war, can only be explained by the scarcity caused by seven successive deficient European crops. This shortness also accounts for the incessant enormous progression in the use of Asiatic, and particularly China silk. For the first months of the new year, until the hopes or fears respecting the new silk crop in Europe produce unforeseen fluctuations, we may look for a steady firmness in prices.

DELIVERIES of SILK through the LYONS CONDITION HOUSE during the last ten years.

	Thrown.	Raws.	Total Weight.
	bales.	bales.	kilogramme.
1850	17,289	5,755	2,059,500
1851	16,230	5,586	1,892,600
1852	18,980	7,165	2,270,000
1853	23,200	9,523	2,833,500
1854	21,455	7,312	2,400,000
1855	27,370	8,647	3,530,000
1856	25,800	9,600	2,850,000
1857	19 595	8,700	2,067,600
1858	27,370	10,955	2,952,600
1859	24,500	9,310	2,523,000

Both hemp and flax have met a very inactive market. The wool trade, however, is firm. Letters from Sydney to the 12th November state that wool was coming forward freely, but that prices ruled very high. The current rates were:—Superior clips, 1s 10d to 2s; fair to good, 1s 8d to 1s 10d; low to middling, 1s 4d to 1s 7d; grease, 10d to 1s 1d; locks, pieces, broken wool, &c., 9d to 1s 1d; handwashed, 1s 6d to 1s 9d; scoured, 1s 9d to 2d per lb.

In the spirit market, generally, there has been no important movement, either as respects demand or value.

The demand for Scotch pig iron has been less active, and sales have been made at 56s cash, mixed numbers. Spelter, for spring shipment, may be quoted at 21*l* 7s 6d.

In oils rather more business has been doing, and linseed qualities have sold at 27*l* 10s to 27*l* 15s per ton. Spirits of turpentine have advanced to 35s 6d for American, and 34s 6d per cwt for English.

The tallow market has continued steady, at 58s 6d to 58s 9d for P.Y.C. on the spot.

COTTON.

NEW YORK, December 27.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

	Sales.	Closing.	Middling.	Freight.	f.o.b.
New Orleans	Dec. 24	58000 unchanged	10¼c	9-16d equal to	6.18d
Mobile	24	30000 ⅛c lower	10⅛c	9-16d —	5.99d
Charleston	23	12000 ⅛c higher	10⅛c	7-16d —	5.91d
Savannah	23	8000 unchanged	10⅛c	13-32d —	5.88d
New York	27	12000 ⅛c lower	Upl. 11c	¼d —	5.91d
Total		120000 bales		Average	5.97d

New York Market.—The decline advised by the Asia led buyers to claim a reduction of ⅛c in this market, which, being yielded, caused a steady business in cottons on the spot, on the basis of 11c for middling Upland. In transitu rather more activity has been reported, at slightly easier rates. The sales of four days (yesterday being kept as Christmas day) reach about 12,000 bales, of which 7,000 in transitu. Southern Markets, by Telegraph.—Continued dull accounts from Liverpool restricted business at the South, and at New Orleans buyers refused to operate, except at reduced prices. Factors yielded slightly, which, with the excellent supply offering, encouraged business. The Asia's news, however, again checked business. Our table above gives latest telegraphic quotations, with the week's sales at each point.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts.		Exports for the Week.		
	Week's Receipts.	Since 1st Sept.	To Great Britain.	To France.	To other For. Pts.
	bales	bales	bales	bales	bales
1859-60	179000	1943000	75000	16000	5000
1858-59	140000	1633000	43000	19000	28000
1857-58	117000	949000	18000	22000	17000
1856-57	134000	1358000	45000	11000	22000
1855-56	137000	1389000	32000	12000	11000
1854-55	70000	854000	48000	7000	4000

	Exports Since First September.			
	To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60	736000	178000	82000	996000	877000
1858-59	478000	228000	113000	819000	700000
1857-58	301000	102000	77000	480000	477000
1856-57	282000	127000	87000	496000	650000
1855-56	447000	168000	119000	734000	584000
1854-55	364000	92000	46000	502000	364000

Thus the receipts show an increase of 310,000 over those of last year, and an increase of 994,000 over 1857-8, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year	Inc.258000	Dec. 50000	Dec. 31000	Inc.177000	Inc. 177000
Compared with 1857-8	Inc.435000	Inc. 76000	Inc. 5000	Inc.516000	Inc. 400000

Exports to Great Britain for the week are 75,000 bales from all ports, against 43,000 bales same week last year. Total to date is now 736,000 bales. The excess over last year is now 258,000 bales, and over the previous year 435,000 bales. To France there are 16,000 bales cleared for the week, and for the season 178,000 bales, and the decrease to that country is now 50,000 bales, when contrasted with same period last year. For other foreign ports there is but little doing; the exports for the week are but 5.000 bales, and the total for the season 82,000 bales, showing atdecrease of 31,000 bales. American spinners are doing but little at the ports, and there are now only 13 vessels loading for them, against 35 at same time last year; while for Great Britain and France the tonnage on the berth is in about the same ratio as last advised, being for the former 126 vessels against 68, and for the latter 43 against 18. For other foreign ports there are now 41 ships loading, against 50 same time last year.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by Mr Ollerenshaw of Manchester.*

New York, Dec. 30.—The cotton market is steady; sales 1,100 bales

MARKETS IN THE MANUFACTURING DISTRICTS

The export demand for manufactured goods, this week, has somewhat increased, and, in some instances, prices have had an upward tendency. Stocks in the warehouses continue very low for the time of year. The wool trade has shown signs of improvement; and higher prices are pretty generally anticipated. In the iron districts, trade has been in a healthy state, owing to numerous contracts being out. Coal has sold freely, on former terms.

Manchester, Jan. 12.—Last week we reported an extensive business for India in the face of most adverse accounts: this week transactions have continued to progress steadily, and a much augmented business has occurred to-day. The latter effect has been due to telegrams received here last night to 27th ult. from Calcutta reporting, as had been expected, the beginning there of a better feeling and a rise on shirtings of two annas per piece. Though at Bombay, by telegrams to same date, piece goods were still undergoing depression, that has not qualified the improvement which has taken place here, the Bombay depression being simply caused by the previous excessive depreciation at Calcutta. Yarns for India which were rising last week ¼d to ½d per lb, have now been sold largely at fully the latter rise. In yarns for the Continent there has been considerable disposition to operate, and in 24's to 30's warp much has been done at full rates. In home yarns the full sale of last week has been repeated. In shirtings, 1½d per piece has been added freely on orders to cover February. Owing to the improvement for India, more confident purchasing has arisen for China, the home trade and printing.

Leeds.—A steady business has been transacted, principally in mixtures and other light fabrics.——Huddersfield.—The most sanguine predictions of a prosperous trade bid fair to be realised. Tuesday was one of the busiest markets we have ever witnessed, and was certainly, for the season of the year, extraordinary. Shipping and country trades were both busy. The purchasers have, in many instances, exhausted a supply which has been keeping our mills working over-hours for months back. The wool market of course partakes of the general prosperity, and if prudence only guide the spirit of enterprise, we shall have a rattling year. ——Bradford.—Wool—Staplers hold firm to their prices. Spinners buy only for immediate requirements, and reluctantly pay the present high prices. In noils and shorts the trade keeps steady, and prices are as for several weeks past. Yarns—There is no new feature in the yarn trade. Prices are very firm. The recent advance on long wools has never been realised upon yarns. Pieces—Prices are firm for all kinds of plain goods, with a certainty of higher prices before many sales can be negotiated. Fancy goods are in full request, and time must be given with any new orders for execution.——Rochdale.—Wool—Business in wool has been quite inactive. Flannels—Manufacturers at this season are generally busy with stock taking, and there is no anxiety in consequence about coming into the market. The Yorkshire trade continues very good, and there is every indication of a good trade for some time to come.——Leicester.—The hosiery trade continues in an active state for this time of the year. Manufacturers are well engaged with orders, and the operatives generally, at least all good hands, are fully employed. The same healthy state of things exists in the country districts. Yarns are in fair inquiry, and prices continue without change. The wool market is tolerably steady; and high prices are yet asked for superior qualities. ——Nottingham.—There is very little improvement in the lace trade. A few home buyers have been in the market, and have made some small purchases. There are also some Americans here, but nothing of any moment is as yet being done. There has been a little doing in fancies, and plain nets are also in slight request. There is very little stock in hand, and, although there have been this week some additional hands set to work, manufacturers are still producing with caution. In hosiery there is a fair amount of business doing for the period of the year. There are orders on hand, and appearances augur favourably for a good spring trade. Yarns are firm, and without change in price.——Wolverhampton.—The meeting of the ironmasters has passed off favourably, but no change was announced in prices. The quotation for I. C. coke tin plates for the present quarter was settled at Gloucester at 32s.

The cotton market has this week been characterised by great irregularity in prices. Much of the fresh import has been pressed for sale, and lower prices have been accepted. The trade have bought largely, and exporters have appropriated cheap parcels. Our quotations for middling American are reduced ⅛ to ¼d per lb., and the grades rather below that range have suffered a greater decline. Egyptian of the better classes remain firm and saleable, but the lower do not move without great difficulty. Brazil are in fair demand at last week's prices. East India are without alteration. The sales to-day may reach 10,000 bales. The market is heavy and irregular. The reported export amounts to 10,550 bales, consisting of 5,490 American, 230 Brazil, and 4,830 East India.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, Dec. 30.—Flour and Meal.—With an increased demand from the local and Eastern trade, accompanied by a moderately active inquiry for shipment and speculation, the market for State and Western flour has assumed a decidedly more buoyant aspect, and prices have advanced 10c to 20c per barrel, particularly noticeable on the medium grades of State. The demand for Southern flour has been moderate, and prices have fluctuated somewhat, the general tendency being to lower rates.

Grain.—The market for wheat is without important change, but a fair demand exists for shipment at prices somewhat below the views of sellers; sales are, therefore, restricted. Corn has ruled dull and heavy and, in order to effect sales of magnitude, holders have been compelled, to grant a concession equal to 4c to 8c per bushel.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Most of the leading markets held since we last wrote, have been but moderately supplied with English wheat. For good and fair qualities the demand has ruled steady, at very full prices; but low and damp samples have ruled inactive on former terms. There has been more business doing in foreign wheats at extreme currencies. The barley trade has continued steady, at full quotations, notwithstanding that the imports from the Continent have been on a liberal scale. We have no improvement to notice in the malt trade, whilst oats, beans, and peas have changed hands slowly at, in some instances, slightly depressive currencies. On the whole, a fair business has been passing in flour, the prices of which are well supported.

Importations of Grain, &c., into the Port of London during the Fourth Quarter of the Year 1859, compared with the Two Previous Years.

Letters from most of the continental markets state that wheat, barley, oats, and flour have continued in fair request, at very full prices. Other produce, however, has tended downwards. In the United States, only moderate transactions have taken place in wheat and flour for export to England.

The Scotch markets have been firm for wheat, barley, and oats, at very full prices, although full average supplies have been on offer. Otherwise, the trade has ruled inactive.

Throughout Ireland the grain trade has continued in a very inactive state; nevertheless, factors, generally, have been firm in their demands, and prices have been well supported.

Most of the English wheat on sale here, to-day, was disposed of at very full prices. Foreign wheat, barley, oats, and flour ruled steady; but all other produce was a dull inquiry.

Mr Ed. Rainford states that only 6 vessels have arrived off coast laden with grain since the 4th inst., and that the business done in floating cargoes has been limited, at drooping prices.

The London averages announced this day were:—

	qrs	s	d
Wheat	3537	46	2

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There has been an improved demand for strong refining sorts at 6d advance, and low soft brown East India sugars are also taken off more freely at stiffer rates. Arrivals continue very moderate, therefore the market is very firm and the supply of West India keeps limited. Up to yesterday 2,450 hhds had found buyers, including 357 casks Barbadoes: brown, 37s to 38s 6d; yellow, 39s to 44s 6d per cwt. Several floating cargoes have been sold for the United Kingdom at full rates to 6d recovery. The week's delivery amounted to 5,500 tons, against 3,200 tons last year, and the stock, according to the latest returns, was 55,100 tons, against 54,550 tons in 1859.

Mauritius.—3,500 bags have sold privately, and 760 bags by auction: low to good brown, 30s 6d to 37s per cwt.

Bengal.—Transactions amount to 2,400 bags, all Gurpatta date, at 40s to 43s 6d per cwt for middling to fine.

Madras.—1,350 bags native have changed hands at 32s, and 8,500 bags Jaggery at 30s 6d; also 755 bags of the latter at 30s 6d; washed, 30s. 7,687 bags grocery: grainy yellow, middling to fine, 44s to 47s 6d; soft yellow, 41s to 44s; white, 46s to 46s 6d per cwt.

Penang.—1,453 bags found buyers: low soft to good yellow, 38s 6d to 42s; brown, 36s 6d to 37s 6d per cwt.

Foreign.—Privately, about 4,000 boxes Havana: No. 9 to 13, 41s 6d to 45s 3d; florettes, 47s to 48s 6d. 13,000 bags Manilla: clayed, 39s 6d to 40s 6d; partly washed, 38s 6d; unclayed, 33s. A floating cargo of Havana, No. 14½, has brought 30s 9d for a near port; one of brown Pernambuco and one of brown Paraiba, 26s; subsequently another of Pernambuco at 26s 9d; and yesterday one resold at 27s, all for the United Kingdom. By auction, 766 casks Porto Rico went at 41s to 47s 6d for low to fine yellow, and 39s to 40s 6d for brown. 719 bags 74 cases Guatemala, 36s to 39s 6d for dark heavy to good brown.

Refined is steady, without further alteration in prices. Common goods cannot be readily obtained below 52s; titlers, 52s 6d to 54s per cwt. Crushed and pieces the same as last week.

Molasses.—The sales are restricted by the indifferent supply. Good Antigua has been sold at 16s per cwt.

Cocoa is firmer, with more inquiry, a Government contract for 150 tons being declared for the 19th inst. 159 bags Trinidad offered by auction were chiefly taken in; a small portion, comprising middling greyish red, selling at 71s 6d; the remainder bought in above the value, viz., 71s to 78s. 163 bags Grenada partly found buyers: middling, 56s to 56s 6d; the remainder bought in at high rates. 80 bags Bahia of indirect import, brought 46s to 46s 6d per cwt.

Rum has been in steady request at full prices. Demerara, 2s 1d; hogsheads, 2s 2d to 2s 3d; Leeward Island proof, 1s 10d; Jamaica, middling quality, 4s 1d per gallon. The stock is 27,000 puns 5,900 hhds, against 26,200 puns 4,350 hhds in 1859 at the same date.

Coffee.—The market has been more freely supplied with plantation Ceylon. The sales went off steadily upon the whole, and quotations exhibit little variation, although some of the middling qualities occasionally ruled slightly cheaper. 832 casks 754 barrels and bags principally found buyers: fine fine ordinary to good middling, 66s 6d to 76s; fine, 87s to 89s. 898 bags 55 casks native: good ordinary to superior picked, 58s 6d to 62s 6d. Several contracts have been made in both descriptions. 190 cases East India: polish Wynard plantation, 64s 6d to 67s; Cochin, 66s. 1,690 bags East India from Singapore found buyers: low and ordinary brownish, 52s to 59s; pale Java kind, 60s to 64s 6d. 43 casks cuba, 74s to 75s 6d for low middling to middling. A floating cargo of Channel good first Rio has sold at 55s 9d per cwt for transhipment in London to Constantinople.

Tea.—A firmer tone pervades the tea market this week, and the trade have bought more freely. Common congou is quoted 1s 3½d to 1s 3⅝d per lb.

Rice.—Transactions to a moderate extent have taken place by private contract, and the market is now very firm, many holders requiring higher prices. Low and low middling white Bengal has sold at 9s 3d to 10s 6d; middling to very good, 11s to 13s; old Rangoon, 7s 6d; good new, 9s 7½d; Cochin China, 10s 3d; fair to good Java, 12s 6d to 13s 6d; Dacca, 9s 6d cash. 2,680 bags Bengal, of old import, by auction, were bought in at 10s to 12s per cwt. A floating cargo of Madras has sold for London at 10s, guaranteed fair quality. The stock is further reduced to 71,615 tons, against 85,700 tons last year, 67,230 tons in 1858, and 54,800 tons in 1857.

Sago.—840 boxes found buyers at former rates: fine small grain, 20s to 20s 6d; good small, 17s 6d; bold, 16s 6d to 17s per cwt. 407 bags sago flour were taken in at 16s 6d per cwt.

Spices.—A large business has been done in cassia lignea privately at much higher prices, touching 105s for good; but 200 cases in public sale went rather cheaper: pile 1, 99s to 100s; pile 2, 94s to 95s per cwt. 101 bags Zanzibar cloves sold at 3½d for middling. 8 casks Amboyna were bought in at 5½d. 1,356 bags Singapore black pepper sold steadily at 4½d to 4¾d; 440 bags shot Malabar, 5⅝d to 5¾d. 233 bags Singapore white were bought in above the value, viz, 6¾d to 6⅞d, but business is reported privately at 6⅝d. Several contracts have been made in pimento at 4d to 4⅛d per lb. 325 cases Cochin ginger, mixed and rather wormy, sold at 78s to 79s per cwt.

Saltpetre.—A very moderate amount of business has been done in Bengal by private treaty at previous rates: refraction, 11⅛ to 7, 37s 6d to 40s. At auction, 480 bags partly found purchasers: refraction 8¾, 38s 6d; 4 to 3⅝ bought in at 42s. 524 bags Bombay, refraction 55½ to 28, brought 28s 6d to 32s 6d per cwt.

Nitrate of Soda is in steady demand, at 15s 6d to 16s per cwt.

Cochineal.—The public sales have passed off without much animation, but excepting for the Mexican, which went cheaper, prices show little change, and 480 bags nearly all sold. Honduras silvers, pasty and low, 2s 6d to 3s 2d; small to good bold, 3s 3d to 3s 10d; Teneriffe silvers, 3s 6d to 3s 7d; blacks, 3s 8d to 4s 1d; Mexican silvers, 3s 3d to 3s 5d; blacks, 3s 6d to 3s 8d per lb.

Dyewoods.—Good Siam is more readily saleable, and 170 tons sold at 8*l* 17s 6d to 9*l* 10s. 68 tons Manilla, out of condition, 6*l* 5s to 7*l* 2s 6d per ton. A floating cargo of St Domingo logwood has sold for export at 5*l* 2s 6d, and one for the United Kingdom at 5*l* 5s per ton.

Other Dyestuffs.—Gambier sells steadily at 16s to 16s 3d. Cutch has been quiet. 450 balea Bengal safflower, recently imported, found buyers at steady rates: ordinary to good, 9*l* to 12*l* 10s per ton.

India Rubber is quoted 1s 1d to 1s 2d per lb for East India, and remains scarce.

Shellac.—Button sorts do not quite support the advance last quoted. Middling to fine sold from 6*l* 15s to 8*l* 2s 6d per cwt.

Drugs.—250 cases castor oil found steady buyers: straw to good seconds, 5½d to 6¼d per lb. No further sales of importance have taken place this week.

Metals.—A more quiet tone has pervaded the market during the week, but the market was again rather firmer yesterday. Spelter has sold at 21*l* 7s 6d to 21*l* 10s per ton for spring shipment, and as low as 21*l* on the spot. Foreign tin can at present only be sold at a further slight reduction in value: Straits quoted 133s to 134s per cwt. No change in British. Copper remains firm at the advance recently established. Scotch pig iron receded to 55s 6d, the closing price this morning being 56s 6d to 56s 9d per ton for mixed Nos. Manufactured descriptions remain steady.

Hemp.—Manilla continues to move off slowly at former rates for roping sorts. By auction, 300 bales good were bought in at 33*l*. On Wednesday the jute sales passed off steadily, and 7,340 bales sold from 12*l* to 20*l* 17s 6d per ton for low to superior marks.

Hides.—The public sales of East India, held yesterday, went off well, considering the large quantity brought forward.

Turpentine.—Sales of rough, 700 barrels at 9s 9d. Spirits have met with a better demand at 35s 6d.

Linseed is active. Three floating cargoes of Odessa have sold at 50s 6d; and one of Taganrog, 49s 9d per cwt.

Oils.—Fish oils are inactive. Orders received from the United States have caused some improvement in the value of linseed, viz., 27s 9d on the spot, and 28s to 28s 6d for forward delivery. Rape steady: foreign brown, 36s; refined, 38s 6d per cwt. Palm flat; and fine Lagos commands 45s 6d. Cocoa-nut has improved in value: Ceylon, 41s 6d; Cochin, 43s to 44s per cwt.

Tallow.—Consumers have bought more readily, and prices come firm from St Petersburg. The market is about 6d to 9d higher, viz., 1st sort

Petersburg Y.C., 58s 9d; March, 59s; for delivery in the last three months, 53s per cwt.

PARTICULARS OF TALLOW.—Monday, January 9.

POSTSCRIPT. FRIDAY EVENING.

SUGAR was firm to-day. 3,770 bags Madras partly sold at previous rates for native. 1,684 bags Gurpatta date Bengal were taken in above the value. A floating cargo of Havana, No. 10 to 10½, sold at 28s 6d per cwt for the United Kingdom.

COFFEE.—220 casks plantation Ceylon and 41 casks 917 bags native bought previous quotations.

RICE.—3,647 bags Bassein were taken in at 9s 6d to 10s; and 4,417 bags Necrancie Arracan sold at 9s 7½d. 700 bags common Rangoon realised 7s 6d to 8s.

SALTPETRE.—3,000 bags sold privately. Bengal, refraction 15 to 4¾, 37s 6d to 41s 6d. In public sale, 1,344 bags partly found buyers: 9 to 4½, 38s 6d to 41s 6d per cwt.

SPICES.—43 cases mace sold: low to fine, 1s 2d to 3s. 82 cases nutmegs: low to good brown, 1s 4d to to 2s 8d; one lot fine, 3s 8d. 31 cases Penang cloves, ts 1¾d to 1s 5d. 134 bags Zanzibar, at 3⅜d to 3⅞d, were dearer by ⅛d to ¼d. 218 bags Penang white pepper sold steadily at 6⅞d to 7⅜d. 248 bags pimento went at ⅛d advance, viz., 4d to 4⅛d per lb. 61 cases Cochin ginger, 87s to 90s per cwt.

TEA.—The public sales, comprising 13,840 packages, went off without material alteration in prices, and 5,000 packages found buyers.

COCHINEAL.—387 bags partly sold at easier rates for Honduras silvers. Good blacks steady.

METALS.—Iron and spelter were firmer; the latter sold at 21*l* 7s 6d to 21 10s per ton on the spot.

TALLOW.—Town was advanced to 60s 3d per cwt; foreign unaltered.

OILS.—By auction, 111 tons sperm oil and head matter sold at 93*l* to 96*l* 15s. 150 tons polar whale bought in at 28*l* 15s to 32*l* 10s per tun. 450 casks palm part sold at 45s, 326 casks, &c., cocoa-nut: Cochin, 42s 6d to 43s 6d; Ceylon, 41s 6d to 41s 9d per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet. Common lumps, 51s 6d. For export, about 350 tons of loaves have been sold for forward delivery. The Dutch market for crushed remains steady without any material alteration.

GREEN FRUIT.—Low prices tend to an increased demand; clearances are upon a large scale. Some cargoes of oranges, sold by Keeling and Hunt at public sale, went at prices similar to those of last week, which may be considered at their lowest. Lemons and nuts in moderate demand; the stock of the former has increased of late, and some holders have been accepting lower rates.

DRY FRUIT.—Transactions have been on a limited scale, and the trade are not yet in the market. Fine currants are firmly held, but at auction a few parcels of ordinary were sold at cheaper prices. Cheame and red raisins dull. Black scarce, and inquired for. Valentias not in demand.

ENGLISH WOOL.—The market quiet: prices firm.

COLONIAL AND FOREIGN WOOL.—The market remains very firm, but little doing, owing to shortness of stock.

FLAX.—Nothing doing.

HEMP.—During the week a fair business transacted, and in some instances at a slight advance in price.

TOBACCO.—Business has been less active, and limited sales were principally confined to good and fine sorts for home trade.

LEATHER AND HIDES.—The leather trade of the new year has commenced satisfactorily. A brisk demand for nearly all kinds of goods has existed; the late advance on light English butts, and former quotations for other articles, are fully supported. The supplies at Leadenhall on Tuesday were moderate, and stocks in general are diminished. At the public sale this week only 100 light River Plate hides were sold out of 2,000 offered, at 8½d. Of 3,680 Australian, 1,240 sold at an advance of ¼d. The 1,288 Cape brought fully former prices. Of the 210,000 East India hides, 146,000 were sold, generally at former rates, and in some of superior qualities at an advance of ¼d to ½d per lb. All other goods retain their former quotations.

METALS.—There is some political excitement, which rather interferes with business, but, on the whole, confidence appears general. Copper is scarce at quotations. Iron was firm at the ironmasters' quarterly meetings this week, and that fact has rather stimulated business. Scotch pig is favourably affected by the rumoured commercial treaty with France. Tin exhibits weakness for foreign, but a good market for English. Spelter is flat, with prices rather lower. Lead shows some improvement. Tin plates in fair inquiry.

PROVISIONS.

A large business doing in bacon this week. Several hundred bales are bought to come on at 61s f.o.b.; 62s having been made for a small portion. Pigs are still coming forward very slowly in the Irish markets. The quality of the Friesland butter much better this week. Prices are rather higher. Large quantities of Irish butter have been bought this week for the Manchester and Liverpool markets, 126s having been given for the finest brands.

METROPOLITAN CATTLE MARKET.

THURSDAY, Jan. 12.—Although the supply of beasts on sale to-day was only moderate, the demand for all breeds ruled inactive, at Monday's decline in the quotations. The show of sheep was rather on the increase. The primest Downs and half-breds supported previous rates, but long-wools were dull, and in some instances 2d per 8 lbs lower in price. Calves, though in moderate supply, changed hands slowly, and the currencies had a drooping tendency.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	8	Prime Southdown sheep	5	2	5	6

HOP MARKET.

BOROUGH, Monday, Jan. 9.—Our market during the past week has been active for every description of the last growth, the finest samples of which, from their scarcity, realised more money. Yearlings and old hops have been in considerable request for speculative purposes, and have made a further advance of from 2s to 4s per cwt. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Jan. 13.—The demand is good for both new and old hops at very firm rates.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Jan. 9.—During the past week the arrivals coastwise have been light, and only moderate by rail. The following are this day's quotations:—York Regents, 90s to 130s; Lincolnshire ditto, 80s to 110s; Dunbar ditto, 100s to 120s; Kent and Essex, 70s to 100s; Perth, Forfar, and Fifeshire ditto, 70s to 100s; Rocks and Reds, 65s to 80s; French whites, 60s to 80s; Belgian ditto, 60s to 78s per ton.

THURSDAY, Jan. 12.—The arrivals of potatoes have been moderate at this market, coastwise and by rail, since the commencement of the week, with a fair demand at the following quotations:—York Regents, from 130s to 160s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 130s; ditto Cups, 70s to 90s; Dunbar Cups, 90s to 100s; and French, 80s to 90s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 12s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. Trade steady.

COAL MARKET.

FRIDAY, Jan. 13.—Walls-end Harton 17s 6d—Walls-end Heugh Hall 18s 6d—Eden Park 15s 6d—Walls-end Whitworth 16s—Wylam 17s—Howard's Hartley 15s—Benton Hartley 14s 9d. 23 ships at market.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 13.—All kinds of foreign of a current class are in good demand, but the business doing is not on a large scale, being in most cases only to satisfy present requirements. Prices continue very firm, and stocks do not accumulate, except of East India, which are held over for the next public sales.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 13.—Corn market dull and languid, and transactions quite of a retail character. Wheat 1d decline. Egyptian beans, 34s. Indian corn steady. Galatz, 32s 6d. Other articles unaltered.

METALS

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 13.—At the Birmingham meeting of Staffordshire ironmasters, held yesterday, there was a good feeling manifested, and prices were well supported. The recent speculative demand for Scotch pig iron has altogether subsided, and, in its absence, prices have again receded. Since the last advance in copper, there is a continuance of great firmness in the market. Spelter has this week given way in price 15s per ton. Tin plates are less inquired for.

The Gazette.

TUESDAY, Jan. 10.

BANKRUPTS.

E. Hawker, Southampton, homœopathic chemist.
J. Dyke, Birmingham, grocer.
E. T. Shadwick, Penarth, near Cardiff, common carrier.

EPITOME OF RAILWAY NEWS.

FRENCH RAILWAY TRAFFIC.—The traffic returns on six of the principal railways in France amounted for the year 1859 to 14,245,749*l*, and for the year 1858 to 12,407,576*l*, showing an increase of 1,838,173*l*, or 14·8 per cent. The traffic receipts on the Northern of France amounted to 2,307,214*l* against 2,203,481*l*, showing an increase of 103,733*l*; on the Eastern of France the receipts amounted to 2,374,197*l* against 2,168,336*l*, showing an increase of 205,861*l*; on the Western of France the receipts amounted to 1,996,757*l* against 1,729,273*l*, showing an increase of 267,484*l*; on the Paris and Orleans the receipts amounted to 2,579,600*l* against 2,335,950*l*, showing an increase of 243,650*l*; on the Paris, Lyons, and Mediterranean the receipts amounted to 4,079,110*l* against 3,267,274*l*, showing an increase of 811,836*l*; and on the Southern of France the receipts amounted to 908,871*l* against 703,262*l*, showing an increase 205,609*l*, making the total, as above, 14,245,749*l* against 12,407,576*l*, and showing an increase of 1,838,173*l* in favour o 1859.

TRAFFIC RECEIPTS.—The railway traffic of the United Kingdom for the past year shows, as usual, an increase over that of all preceding years. It amounts, as nearly as can be estimated from the returns, to 25,576,100*l*, showing an increase over those of 1858 of 1,812,336*l*, and over those of 1857 of 1,413,645*l*. The depression of trade and railway competition at unremunerative rates in 1858 had the effect of annihilating the ordinary increase of traffic, and, for the first time in the history of railway traffic, depressing the receipts 400,000*l* below those of the preceding year.

GREAT INDIAN PENINSULA.—The net profit in the year upon the capital expended on the mean number of miles worked was equal to 5*l* 15s per cent., and for the previous year to 5*l* 0s 4d per cent. During the year four passengers were killed, and four injured from causes beyond their own control, and one passenger was injured through his own misconduct or want of caution.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Jan. 9.—In the railway market there was a reaction in British stocks ranging from ¼ to ⅜ per cent. The closing prices, however, were rather better than at one period of the day. No change of importance occurred in foreign shares, except a decline in Pernambuco to 1⅞ to 1½ discount. San Paulo left off ¼ discount to par. American securities were without alteration. Mines were steady at an occasional advance.

TUESDAY, Jan. 10.—In the railway market there was a general want of animation, and the less favourable tendency of the funds caused a slight decline. Nearly all the leading British stocks were quoted lower, but no important transactions took place during the day. In the colonial market, Indian guaranteed occasionally exhibited a further reaction. Grand Trunk and Great Western of Canada were flatter. Foreign shares were also dull, especially French. In American securities there was a decline in the shares of the Illinois Central, and an improvement in the mortgage bonds of the New York and Erie. Canada Government debentures were firmer. Mines and joint stock banks continued in fair demand, with an upward tendency.

WEDNESDAY, Jan. 11.—The railway market again experienced a little heaviness, the final prices of nearly all the principal British stocks being a fraction lower than yesterday. The general business, however, has been unimportant. In colonial descriptions, Grand Trunk of Canada was again flat. Some of the Indian guaranteed stocks slightly declined, East Indian leaving off 103¼ to ⅜. Mines were generally steady, but in one or two cases, especially St John del Rey, there was a decline.

THURSDAY, Jan. 12.—The railway market improved in the morning, but subsequently experienced a relapse. The general business was small, the approach of the half-yearly meetings checking speculation. In foreign shares, Lombardo-Venetian improved. The introduction of the new Rio drainage scheme has caused a decline in Brazilian railways. No change occurred in American securities or joint stock banks.

FRIDAY, Jan. 13.—The dealings in the railway share market was rather limited, and prices showed increased heaviness. Foreign and colonial undertakings were dealt in to a very moderate extent, at about previous values.

The Economist's Railway and Mining Share List.

THE HIGHEST PRICES OF THE DAY ARE GIVEN.

HOLLOWAY'S OINTMENT AND PILLS.—Rheumatism, Gout, Neuralgia.—The damp weather commonly prevailing at this season renders the above diseases almost epidemic. In some shape or other all, except the most robust, are tortured by them. Let all such sufferers turn with confidence to Holloway's Ointment and Pills, which, for a quarter of a century, have been lauded above all other drugs for their soothing and curative powers in these complaints. The affected parts, first fomented in warm water, should be rubbed with the Ointment twice a day as briskly as is bearable. The Pills should be taken at the same time to obtain the full beneficial effect; so that while the Ointment soothes locally, the Pills purify, stimulate, and strengthen generally.

INTERESTING TESTIMONY in favour of DR LOCOCK'S PULMONIC WAFERS.—An eminent Wesleyan Minister, the Rev. W. H. Evans, in writing the biography of his father, in the "Welsh Wesleyan Magazine" for December, 1859, says:—"He had been very painfully affected by an asthmatic complaint and a troublesome cough; but by the use of Dr Locock's Wafers these were removed, so that he enjoyed ease in his latter days, and was entirely free from the cough which so generally troubles old ministers."—See the "Welsh Wesleyan Magazine" for December, 1859, p. 402.

Dr Locock's Wafers give instant relief, and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all medicine venders.

AN ACT OF GRATITUDE.—20,000 Copies of a Medical Book for gratuitous circulation.—A Nervous Sufferer, having been effectually cured of nervous debility, loss of memory, dimness of sight, lassitude, and indigestion, resulting from the early errors of youth, by following the instructions given in a Medical Work, he considers it his duty, in gratitude to the author, and for the benefit of others, to publish the means used. He will, therefore, send free, secure from observation, on receipt of a directed envelope, and two stamps to prepay postage, a copy of the book, containing every information required. "Every young man should peruse this excellent little work, if he values his health, happiness, and peace of mind."—BRITISH CRITIC. Address, James Wallace, Esq, Wilford house, Burton crescent, Tavistock square, London, W.C.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of man and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and o be had of all booksellers.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

CHRISTMAS TOILETTE REQUISITE and NEW YEAR'S GIFT.—Among the many articles of luxury and value purchasable at this season, none can be obtained possessing the manifold advantages of OLDRIDGE'S BALM of COLUMBIA. It nourishes the roots and body of the hair, imparts the most delightful coolness, with an agreeable fragrance of perfume. And at this period of the year prevents the hair from falling off, or if already too thin or turning grey, will stop its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

Just published, in 1 vol 8vo, with numerous Anatomical Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternost row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.

MR CURTIS, AUTHOR OF THE Medical Treatise "MANHOOD," may be consulted as usual, either by letter or personally, at his residence, 15 ALBEMARLE STREET, PICCADILLY, LONDON. The efficacy and harmless nature of the remedies employed by Mr CURTIS, having been demonstrated by the most complete success during a practice extending over a period of 20 years, nervous sufferers of every class, including those afflicted with want of energy, loss of memory, pains in the back, self-distrust, functional incapacity or debility, have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

At home for consultation daily, from Ten till Three, and Six till Eight. Sundays from Ten till One.

REVIEWS OF THE WORK.

"CURTIS ON MANHOOD.—This is a truly valuable work, and should be in the hands of young and old."—SUNDAY TIMES, 23rd March, 1856.

"It is the duty of all men to study the laws of their body, no less than those of their mind. In the pages of this work will be found golden rules for regulating the one and preserving the other."—MARK LANE EXPRESS, March 31, 1856.

"The author has conferred a great boon by publishing this little work, in which is described the source of those diseases which produce decline in youth, or more frequently premature old age."—DAILY TELEGRAPH, March 27th, 1856.

"The book under review is one calculated to warn and instruct the erring, without imparting one idea that can vitiate the mind not already tutored by the vices of which it treats."—NAVAL AND MILITARY GAZETTE, 1st Feb., 1856.

An enlarged edition of the above work has just been published, and may be had of Piper and Co., 23 Paternoster row; and all booksellers. Price One Shilling, or free by post, in a sealed envelope, from the Author for 14 stamps.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S CELEBRATED SHERRIES.

RAIL PAID TO ANY STATION IN ENGLAND.

THOMAS NUNN AND SONS,

WINE, SPIRIT, AND LIQUEUR MERCHANTS,

(ESTABLISHED 1811),

21 LAMB'S CONDUIT STREET, FOUNDLING HOSPITAL, W.C.,

Respectfully call the attention of the public to the SHERRIES of the above eminent shipper: they are extremely soft and nutty, and so perfectly mellow and free from heat or the slightest approach to acidity, as to render them alike favourites both with the connoisseur and the invalid.

DINNEFORD'S

PURE FLUID MAGNESIA

has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

LAWRENCE HYAM,

in his Bespoke Department, employs the most skilful cutters, under his immediate superintendence, and carefully examines every garment previous to its being sent home. The Trousers, at 17s, made to measure, are cut upon such principles as to ensure true and elegant fit,—whether the wearer be walking, riding, or sitting Gentlemen may select from a stock of cloths of all descriptions,—amounting to £16,000;—and the extraordinary variety cannot fail to meet the taste of the most fastidious.

LAWRENCE HYAM'S

JUVENILE ATTIRE has secured for him the largest connection among parents and guardians; and having now been established above 20 years, he can safely refer to his great and continued success, as an indication of the upright manner in which his large business is conducted.

CITY ESTABLISHMENT, 36 Gracechurch street,
WEST END ESTABLISHMENT, 189 and 190 Tottenham court road.

ECONOMY AND EXCELLENCE.—

E. MOSES and SON, Merchant Tailors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules for self-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—
LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).
COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT,

made in various colours and patterns, particularly adapted to walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

ALLSOPP'S PALE OR BITTER

ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON.....	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER.....	At Ducie place.
DUDLEY.....	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW.....	At 115 St Vincent street.
DUBLIN.....	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM.....	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross.
SOUTH WALES	At 13 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES'

ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d. 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuineness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted, Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES:
ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

HANDSOME BRASS AND IRON

BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED

CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture Manufacturers 196 Tottenham court road, W.

TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR,

preferred to the best Arrowroot. Delicious in Puddings, Custards, Blancmange, Cake, &c., and especially suited to the delicacy of Children and Invalids. The LANCET states, "This is superior to anything of the kind known."—Trade Mark and Recipes on each packet, 4, 8, and 16 oz. Obtain it where inferior articles are not substituted, from Family Grocers, Chemists, Confectioners, and Co dealers.—77A Market street, Manchester; and 23 Ironmonger lane, London.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

DR KAHN'S MAGNIFICENT

ANATOMICAL MUSEUM, top of the Haymarket (acknowledged by the whole of the Press to be the most useful and instructive of any in existence), is open daily for Gentlemen only, from 12 till 5, and from 7 till 10. Admission One Shilling. Descriptive handbooks gratis. Dr Kahn's Popular Lectures on the "Philosophy of Marriage," daily at 3 and 8 o'clock precisely. Syllabus—Happy and Unhappy Unions, and their causes—Youthful Vices and Indiscretions, and their results—Disqualifications for Marriage, and their cure—the Physiology of Reproduction—Self-inflicted Miseries—Sterility and it causes—How to Secure Moral and Physical Happiness.

N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the author, 7 Harley treet, Cavendish square, W

FENDERS, STOVES, FIRE-IRONS, and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormoln ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormoln ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d
12 Table Forks	1 13 0	2 4 0	2 10 0	2 15 0

Total	9 19 9	13 10 3	14 19 6	16 4 0

Any article to be had singly at the same prices. An Oak Chest to contain the above, and a relative number of knives, &c., 2l 15s. Tea and Coffee Sets, Dish Covers, and Corner Dishes, Cruet and Liqueur Frames, &c., at proportionate prices. All kinds of replating done by the patent process.

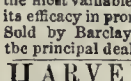
DISH COVERS AND HOT-WATER DISHES in every material, in great variety, and of the newest and most recherché patterns. Tin Dish Covers, 6s 6d the set of six; Block Tin, 12s 3d to 27s the set of six; elegant modern patterns, 35s 6d to 62s 6d the set; Britannia Metal, with or without silver plated handles, 3l 11s to 6l 8s the set; Sheffield Plated, 10l to 16l 10s the set; Block Tin Hot-Water Dishes, with wells for gravy, 12s to 30s; Britannia Metal, 22s to 77s; Electro-Plated on Nickel, full size, 11l 11s.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illimited stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1A, 2, and 3 Newman street; and 4, 5, and 6 Perry's place, Londen.—Established 1820.

COCOA.—TAYLOR BROTHERS' PATENT LENTILIZED COCOA is pronounced by Professor Letheby and Dr Hassall to be superior in nutritious element to all others. See their reports, printed on the labels of each canister. Sold by all grocers at 1s 6d per lb.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"



and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

LEA AND PERRINS' WORCESTERSHIRE SAUCE is universally acknowledged to be the most valuable condiment, and experience has proved its efficacy in promoting digestion and preserving health. Sold by Barclay and Sons, Cresse and Blackwell, and the principal dealers everywhere.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street. Portman square, London.

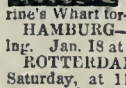
OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Kennion, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

ASIA*, for NEW YORK direct, Saturday, January 21.

* Taking Passengers and Goods for Nassau and Havana, to be transferred at New York on board the R.M.S.S. Karnak.



CANADA, for BOSTON, Saturday, January 28.

ARABIA, for NEW YORK direct, Saturday, Feb. 4.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

*** IMPROVED ACCOMMODATION FOR PASSENGERS LANDING AND EMBARKING AT ST KATHARINE'S WHARF.—An additional and separate entrance, leading direct to and from the steamers alongside the wharf, with waiting-rooms attached, has been provided for the use of passengers only, by which all confusion and inconvenience arising from the goods traffic is avoided.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

TWENTY-THIRD REPORT OF THE

UNION BANK OF LONDON.

—At a Half-Yearly Meeting of the Proprietors, held at the Court Room of the Banking House, 2 Princes street, Mansion House, on Wednesday, the 11th of January, 1860, Sir Peter Laurie, Alderman, Governor, in the chair, the following Report was read by the Secretary:—

The Directors have the pleasure of reporting that the net profits of the Bank for the last half-year, ending 31st December, after payment of all charges, and including the sum of £122 0s 6d, brought forward from 30th June last, amounts to £60,003 4s 5d.

The Directors now declare a Dividend for the last six months at the rate of 10 per cent. per annum, and a Bonus of 2½ per cent., on the paid-up capital (now amounting to £720,000, by the addition from the reserved profits, announced at the general meeting in July last), being at the rate of 15 per cent. per annum, clear of income tax.

In August last, the Directors concluded an agreement with the old-established and highly-respected banking firm of Messrs Dixon, for the transfer of their business to this Bank, which has secured an influential connection; and the Directors have to acknowledge the cordial co-operation of Messrs Dixon in carrying out this arrangement.

After payment of the above, amounting to £54,000, there will remain a balance of £6,003 4s 5d to be carried forward for appropriation at the end of the financial year, in July next.

THE UNION BANK OF LONDON, 31st December, 1859.

Dr. LIABILITIES.	£	s	d
Capital—£10 per share paid up on 60,0000 shares £600,000			
£2 per share added out of reserved profits 120,000

	70,786	3	0

Cr.	£	s	d
Surplus, as above, after deduction all expenses, and interest (£42,766 16s 6d) paid or due to customers, on their current and deposit accounts	70,786	3	0
	70,786	3	0

The Governor then declared a dividend for the past half-year of 5 per cent., and a bonus of 2½ per cent., on the paid-up capital of the Company, clear of income tax.

It was resolved unanimously—

That the report now read be agreed to, printed, and circulated among the proprietors.

That the best thanks of the meeting be given to Sir Peter Laurie, the Governor, the Deputy-Governor, and the Directors, for their eminently judicious management of the Bank during the past half-year.

That the thanks of the meeting be given to Mr W. W. Scringeour, the General Manager; Mr Barton, the Deputy-Manager; Mr Ingpen, the Manager of the Regent street branch; Mr Wight, the Manager of the Charing cross branch; Mr Beattie, the Manager of the Temple bar branch; and to Mr Henry Newmarch, the Secretary, for the zealous and efficient manner in which they have discharged their several duties.

(Signed) P. LAURIE, Governor.

That the thanks of the meeting be given to Sir Peter Laurie, the Governor, for his able and courteous conduct in the chair. (Signed)

JAMES FARQUHAR, Deputy-Governor.

Extracted from the Minutes,
HENRY NEWMARCH, Secretary.

N.B. The Dividend and Bonus will be payable on and after Friday, the 20th instant.

BANK OF NEW SOUTH WALES.

—The 18th half-yearly meeting of the shareholders of this bank was held on Wednesday, the 26th of October last, at the Banking house, in Sydney, Sir Daniel Cooper in the chair.

The following report was read and unanimously adopted:—

The directors have pleasure in again meeting the proprietors, and submitting the annexed statement of the affairs of the bank for the half-year ending the 30th ult.:—

	£	s	d
The undivided balance of 31st of March last was	5,144	8	8
To which are to be added the net profits, after deducting rebate on current bills, allowing interest on deposits, paying all expenses of management, and providing for bad and doubtful debts	65,067	16	1
Leaving for distribution.....	70,212	4	9

Which the directors recommend to be applied as follows:—

To payment of dividend at the rate of 20 per cent. per annum.....	£50,000	0	0
To increase of reserve fund...	14,925	4	8
To balance carried forward to present half-year.....	5,287	0	1
	70,212	4	9
With the above increase to reserve, and the sum of £74 15s 4d collected from debts previously written off as bad and doubtful, that fund will amount to.....	205,000	0	0

During the past half-year the directors have established a branch at Chiltern, the township of the newly-discovered gold fields at Indigo, in the colony of Victoria, and recommend that the authority under which they have acted be continued during the present half-year.

In conformity with the resolution passed at a special general meeting held on the 28th ult., the allotment of new shares then agreed upon will be made to-morrow in the proportion of one to every two now held. Several new shares remain over the allotment on the division by two, and it is in the power of this meeting to determine the appropriation of any premium that may accrue upon the sale of such shares. Your directors would suggest that they be sold, and the premium realised distributed equally among those shareholders from whose stock the surplus shares are derived.

The deed of settlement at present limits the amount of shares to be held by any one proprietor to 1,000. As the present increase of capital demands a reconsideration of this restriction, your directors recommend that the clause relating thereto be altered so as to limit the proportion of the stock held by any shareholder to one twenty-fifth of the whole capital.

It will be the duty of this meeting to elect a director in the room of John Alexander, Esq., and an auditor in the place of Thomas Walker, Esq., who both retire by rotation. Thomas Walker, Esq., is the only candidate for the first-named office, and has given the required notice.

The dividend will be payable on and after to-morrow, the 27th inst., and the amount of one-half at least of the new allotment of shares is payable at the same time.

On behalf of the Board of Directors,
DANIEL COOPER, President.

AGGREGATE BALANCE SHEET OF THE BANK OF NEW WALES, Sept. 30, 1859.
(Including London Branch to June 30, 1859.)

Audited October 25, 1859.
THOS. WALKER, } Auditors.
R. A. HUNT, }

Mr Thomas Walker was elected a director in the room of Mr G. Alexander, who retired by rotation, and Mr Edward Lotze was elected an auditor.

BANK OF NEW SOUTH WALES,

Established 1817.

Notice is hereby given that, at a Half-yearly General Meeting of Proprietors, held within the head Banking-house of the Corporation at Sydney, on the 26th October last, a Dividend on the Capital Stock of the Bank was declared at the rate of 20 per cent. per annum. The same will be payable at this office on and after Tuesday, the 10th instant, on the Capital Stock standing on the London register. The Share Register will be closed from this date to the 12th instant.—By order of the London Board, JOHN SIMPSON, Secretary.

37 Cannon street, London, Jan. 7th, 1860.

LONDON & WESTMINSTER BANK.

—Notice is hereby given, that the ANNUAL GENERAL MEETING of this Company will be held at the Bank, in Lothbury, on WEDNESDAY, the 18th day of January next, at One o'clock precisely, to declare a Dividend, and to Elect Three Directors, in the place of John Garratt, Esq., James Denis De Vitre, Esq., and George Hanson, Esq., who retire by rotation, but, being eligible for re-election, offer themselves accordingly. W. EWINGS, General Manager.

Lothbury, Jan. 2, 1860.

The Transfer Books of the Company will be Closed until 23rd inst., to prepare for the dividend.

NOTICE OF DIVIDEND.—

BANK of DEPOSIT (Established A.D. 1844), No. 3 Pall Mall east, London, S.W.—The WARRANTS for the HALF-YEARLY INTEREST, at the rate of 5 per cent. per annum, on Deposit Accounts, to the 31st December, are ready for delivery, and payable daily between the hours of 10 and 4.

PETER MORRISON, Managing Director.

10th January, 1860.

Parties desirous of Investing Money are requested to examine the plan of the BANK of DEPOSIT.

Prospectuses and forms sent free on application.

ENGLISH, SCOTTISH, AND AUSTRALIAN CHARTERED BANK.

Capital paid up, 500,000*l.*

LETTERS OF CREDIT ON THE BRANCHES are GRANTED on the most favourable terms. Bills on the Australian Colonies negotiated and sent for collection.—By order of the Court,

73 Cornhill, E.C. HENRY MOULES, Secretary.

SOUTH AUSTRALIAN BANKING

COMPANY.—Incorporated by Royal Charter, 1847.—Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, and Robe Town. Approved Drafts negotiated and sent for collection. Every description of Banking business conducted direct with Victoria and New South Wales, through the Company's Agents. Coupons on Australian Government Bonds discounted.—Apply at 54 Old Broad street, London, E.C.

WILLIAM PURDY, Manager.

CHARTERED MERCANTILE BANK

of INDIA, LONDON, and CHINA.

HEAD OFFICE, 52 Threadneedle street.

Agencies and Branches at Bombay, Calcutta, Madras, Colombo, Singapore, Penang, Hong Kong, Shanghai, and Mauritius.

The Bank, at its Head office in London, grants Drafts on its various Agencies and Branches; issues Letters of Credit; purchases approved Bills on India, China, Ceylon, and Mauritius; undertakes the purchase and sale of Indian Government and other Securities, and the collection of Private and Mercantile Bills, at the ports and places at which its Agencies are established; receives Deposits at Interest for Fixed Periods, the terms of which may be ascertained on application; and transacts generally all Indian Banking business, including the receipt of Pay, Pensions, and Dividends on Stock of all kinds.

The Political Economist.

THE FRENCH EMPEROR'S LETTER ON FREE TRADE.

THE Emperor of the French is at least a man who does not forget the brevity of human life. He loses no time. He gives us one week a programme of the future of Europe, the next another and different programme, the next a promise of a commercial treaty with ourselves, the last week an outline sketch of vast internal reforms. He evidently has a pride in showing himself superior to the bureaucratic system by means of which he rules. The history of the world has few documents that are more remarkable than the concise letters which he writes in his own person, which announce vast plans for the future, which are inconsistent with the maxims upon which his recognised Ministers have hitherto been acting.—which are generally vastly better than those maxims. In foreign policy, the Emperor of the French, who knows England, will not be surprised that Englishmen of business feel puzzled to follow his changes; he knows their tenacious and cautious habits, and will not wonder if they are desirous of having something more fixed, more stable, and more consistent. But, as far as respects the Emperor's commercial policy, there is no ground for these perplexities. He has always been known to be a Free-trader. He has always acted upon his opinions on that subject as far as he could, and as far as the sinister interests of some and the ignorant prejudices of very many of his people will permit him. We may have very great confidence that he will carry out the principles of commercial freedom as completely as he can in the present circumstances of France, and we may be sure that if he stop short of completeness, he will be withheld not by any casual caprice, but by the instinctive wish not to change too fast in business matters, and by the natural caution of a careful statesman.

As far as respects his recent letter to M. Fould, there is little to be said which does not imply the highest praise. At the present moment especially, when he has set at defiance the wishes of the Roman Catholic clergy, upon which many have fancied that his power mainly rested, it required no small measure of statesmanlike hardihood to oppose the class-interests of another large portion of his subjects, unaided, as he unfortunately is, by the public opinion of France at large. If the Emperor is able, and we have no doubt he will be able, to carry out the scheme of which he has indicated the outline, he will secure to himself the fast friendship to the larger part of the mercantile classes of England; he will have given to France a blessing which they thoroughly understand; as they will see that he is right as to free trade, they will try to believe that he is right in other things; they will endeavour to forget what they cannot approve of; they will forget, if they can, the too rapid vicissitudes of his foreign policy, and the iron strictness of his internal government.

The moment, the Emperor tells us, has now come for Frenchmen to occupy themselves with "the means of giving "a great impulse to the various branches of the national "wealth." We may be sure that such an impulse is needed. It is certain that France does not now play a part in commerce that corresponds to her greatness in politics and in war. A glance at our own Board of Trade returns will show at once how little she takes from us in comparison with what she ought to take. In that respect she is now inferior to several nations, with whom it would be ridiculous to compare her in social influence, in military power, or in cultivated intelligence. In 1858 and 1857 our exports to the undermentioned countries respectively were—

	1858. £	1857. £
Hanse Towns	9,024,435	9,595,962
Holland	5,456,423	6,384,394
France	4,861,558	6,213,358
Turkey	4,265,406	3,107,401
United States	14,510,616	18,985,939
Australia	10,464,198	11,632,524

Considering how great a country France is, that her population amounts to more than thirty-six millions of persons, it is extraordinary that she should not purchase more from her next neighbour,—that she should not be able to fill a place in our list of customers immeasurably higher than that of Holland or Turkey.

A French official writer, M. Philadelphe Chemin-Dupontès, who fills an important office in what we may call by analogy the French Board of Trade, has constructed a curious table to show the relative amount of the commerce of each of the various nations of Europe in proportion to their population. It is as follows:—

Places.	Population.	Value of Commerce. Total in millions. francs	For each inhabitant. francs c
Hanse Towns	500,000	3,110	622 0
Holland	3,451,000	1,600	463 63
Switzerland	2,400,000	900	375 0
Belgium	4,585,000	1,819	350 92
England	28,154,000	8,350	296 58
Sardinia	5,042,000	843	167 26
France	36,039,000	5,329	147 86
Tuscany	1,817,000	240	132 8
Sweden, Norway, and Denmark	7,500,000	825	110 0
Greece	1,043,000	74	70 90
Germany	32,700,000	2,200	67 28
Portugal	3,500,000	221	63 14
Turkey in Europe, and Danubian Principalities	15,500,000	800	51 61
Austria & Lombardy & Venice	39,400,000	1,811	41 11
Spain	16,000,000	639	39 94
Roman States	3,125,000	118	37 76
Two Sicilies	9,200,000	250	27 20
Russia in Europe	60,123,000	1,100	18 33
Other countries	1,921,000	29	13 1
Total	272,000,000	30,258	

We are far from making ourselves responsible for the exact detail of this estimate, and we doubt if there are data for making any very accurate estimate on the subject. The mode in which exports and imports are valued varies very materially in the different countries, and we shall be sure to

make considerable mistakes if we attempt to compare the commercial statistics of one with the commercial statistics of another. Still, this estimate, like many others, may be useful as an approximation, though it is probably not accurate as a result. There is no doubt of the general fact which it so strikingly brings out. There is no doubt whatever that France, as well as all the other larger countries on the Continent, are utterly backward in a commercial point of view in comparison with what they ought to be, and what they might be. Their commerce appears ridiculously small, when contrasted not only with that of England, but likewise when compared with that of the United States and of Australia.

There can be no question but that the measures that the Emperor is taking are measures in the right direction. Their detail is not, indeed, as yet fully before us; but we can have no hesitation in saying that the abolition of prohibitions,—the very great extent and variety of which in France will be best understood by glancing at the striking enumeration in our Paris correspondent's letter of this week,—the reduction of protective duties,—the improvement of the means of communication, the development of agriculture, and the consequent improvement in the comfort of the rural population, are not merely the best means, but the sole means of augmenting the trade of France, and of raising her to that place in the commercial world which she ought to occupy, which we should expect her to occupy, and which she would occupy if the energies of her people had fair play.

In one respect there is a remarkable omission in the Emperor's letter. He alludes to progressive reductions in the duties upon raw material, but these are not the articles of which we in this country should most wish to hear him speak; we should rather hear of the great *implements* of industry—coal and iron. It is these in which France is so defective, and it is these in which the Protectionists' interests are strongest. If the latest reports from Paris are to be credited, however, the Emperor's plans extend to these important articles also, as we should be prepared to expect that they would do. Like a prudent statesman, he begins with the less difficult points, and leaves the others till time has familiarised the public with his ideas, and till experience shall have justified his efforts.

Many Free-traders in this country may be inclined to doubt whether the Government of France is right in assuming a conspicuous position, which it proposes to do, in promoting agriculture, in developing the means of communication, and in establishing works of public utility. They will think that the greater part of such matters will better be left to the French people themselves. As a general principle, we scarcely need say that we entirely agree with them; we at least shall not be suspected of wishing that the people should have anything done for them which they can do for themselves, but we must consider the peculiar circumstances of France, and the structure of its society. The Government there, is, as we know, despotic; it prevents all free discussion, it impedes all free energy, it cramps all local life. It annihilates very many, and those among the most important of the sources of improvement on which we rely in this country, and on which the principles of commercial freedom teach us that we ought to rely. We must not, therefore, wonder that the Government finds it necessary to assume more than usual responsibility; as it has *prevented* so much good, it naturally wishes to *do* some good. On matters of trade, as we see, the Emperor of the French is immeasurably wiser than the great majority of the French nation; he knows, however, that they look to the Government for the initiative in all things. It is not, therefore, surprising that he wishes to make use of his vast influence for the development of his wisest ideas. We may regret the omnipresence of the executive administration in France; but while it is omnipresent, we should rejoice that it is enforcing what is right.

A somewhat similar remark applies to the pecuniary means which the Emperor proposes to use in the execution of these internal improvements which he contemplates. He proposes to borrow money for them,—or, at least, to do what is very like it:—that is to say, he proposes to employ in executing them the unexhausted portion of the war loan, and to suspend the operation of the sinking fund, by which in theory the rapidly-increasing debt of France is supposed to be kept down. If these measures do not create debt, they at least prolong the existence of debt. Under ordinary circumstances, we should not consider these measures to be desirable, or even to be justifiable. But, perhaps, in the peculiar circumstances of France at present, they may be so. She is capable of vast internal improvement, and it may be well that she should use every possible means to attain that improvement. The rapid augmentation of the debt of France is indeed one of the weakest points in her present state, but it may be well to postpone its reduction, or even to increase it, if by so doing she can secure freedom to her industry, improve her condition in many most important respects, and elevate herself to the rank among commercial nations which she ought to occupy, and in which those who wish her well hope in a few years to see her stand.

With respect to the commercial treaty, which it is said has been already signed, or will be signed to-day, between France and England, we must, of course, reserve our opinion till the details are known. To comment on hypothetical facts is always an unprofitable task. We intimated last week that the equivalent which England will be expected to give is not quite of the same kind as that which she receives from France. Still less can this be said to be the case if it be true, as is stated, that England is to fulfil her part of the contract immediately by lowering her duties on such luxuries as French wines, brandies, silks, &c., while France is to defer till July, 1861, her part of the engagement. It is obvious that many contingencies may intervene between this and then, which would render the French equivalent for a very real sacrifice of the least objectionable elements in our revenue system, quite nugatory. However, we must reserve all opinion on the treaty till its actual provisions are before us.

THE POLITICAL CRISIS IN AMERICA.

The conflict which is now going on in the United States is full of the gravest and most painful significance for all thinking men. In no other quarter of the world are good and evil so distinctly in conflict as is just now the case in America; and yet in no quarter of the world does the magnitude and the solemnity of the crisis seem to be so little understood. The Italians are perfectly aware that the future of their country turns almost entirely upon their firmness and patience in the present year. But in America a vastly deeper and profounder question is now in one of the most critical phases of its history than even the question of constitutional liberty in Italy,—the question whether or not the permanent existence of a servile class is to be incorporated with the essence of modern civilisation in one of the greatest nations of the earth. Yet we affirm, with profound regret, that the American politicians on both sides seem to be intellectually unconscious of the vastness of the issue. Passion, spite, petty personality, small wit, the spirit of compromise, and, as the best and highest of all, the spirit of shortsighted, unstatesmanlike anger against the Slave States, mark the tone of the debates in Congress. On neither side is there any feeling that that great question, the false solution of which tended more than anything to dissolve the ancient civilisations of Greece and Rome, is again raised. There seems to be no Slavery advocate who, like Lord Strafford in relation to despotism, can grasp the whole question in its breadth and boldly say, "Evil, be thou my good." There is, we almost fear, scarcely any Anti-Slavery statesman in the Congress who can, like Pym or Cromwell in relation to English freedom, clear the question of all personalities, and bring home to the conscience of his nation the tremendous nature of the issue before it.

Let us glance briefly at the situation, to our eyes most sad and gloomy, of the Slavery question in America. In the South, all parties, from the highest to the lowest,—from the oldest families in Virginia to the "mean whites" of Maryland,—are stirred up to acts of the most shocking and shameless insolence. The lives even of immigrants from this country who may happen to hint that respect for labour is inconsistent with the axioms of Slavery are no longer safe, as is shown by the case of Power in South Carolina, who is said to have recently been judicially punished, and then all but murdered, for a mere accidental allusion to what is the universal faith of this country. The Legislature of one Southern State has

instructed its representatives to urge the Senate of the United States to insist on such a modification of the Criminal Justice Treaty with England, as shall oblige England and her colonies (Canada of course being the one aimed at) to restore not only "fugitives from justice," but "fugitives from "labour." The House of Representatives of another State (Maryland) has just adopted a resolution "that John "Sherman" [the Republican candidate for the Speaker's chair in the House of Representatives at Washington] "or any other black Republican should not be elected "Speaker, and that if any member from this State "[Maryland] voted for him, or any such exceptionable can- "didate, he would forfeit the respect and confidence of the "people of the State." The white citizens of the State (Maryland) meanwhile have adopted an address to the State Legislature, urging strenuously upon its members to abolish "free Negroism" for ever in that State, on the express ground that Government is primarily intended for the benefit of the white population alone, and that the competition of free Negroes is hurtful to white interests. They deliberately ask the Legislature to pass an act dividing the free coloured population amongst the white citizens of the State, and adjudging them to permanent Slavery, granting, however, as a generous concession, that they shall be "exempted from "sale under execution for debt." In a word, the Southern States are to the last degree furious and threatening. It is believed that a demand will be made upon the Northern States for the extradition for trial of many of the Anti-Slavery leaders suspected of being parties to the Harper's Ferry plot, or otherwise conspirators against the peace of the South,—and it is certain that in every way the South are now prepared to push matters to the verge of civil war.

In the North, and in the Federal Legislature at Washington, there is little sign of that determined and united front, that clear inflexible principle on the part of the Free-soilers which could alone hope to withstand effectually the furious and united onset which is preparing. It is true that the Republican candidate for the Speaker's chair in the Washington House of Representatives, Mr Sherman, of Pennsylvania, though hitherto unsuccessful, seems to unite many more votes than any candidate of the democratic or any other party. But it also seems unfortunately certain that the Republicans are not of one mind,—that their common name embraces many shades of disposition to compromise matters with the South. For example, there is Mr Stanton, one of the members for Ohio, whom one of his democratic colleagues describes with the highly-coloured, but to European ears not perhaps very lucid epithets, as "a mahogany Whig "slightly varnished with Republicanism." This unfortunate specimen of complicated political tattooing, although denominated Republican, and apparently a supporter of Mr Sherman's, is clearly not one who can in the least be depended on for a firm and high-principled resistance to the Southern aggression. He tells the House of Representatives, with some emphasis, that he should not offer any opposition to a "proper" fugitive slave law. He only opposes the law of 1850 because it is liable to abuse,—because it is turned into an instrument of enslaving, on false pretences, the free coloured population, instead of merely recovering the escaped slaves. Limit the law so as to give good guarantees against its "abuse" to entrap the free,—and Mr Stanton, of Ohio, would not oppose it. And Mr Stanton, of Ohio, is not an exceptional member of the Republican party, a large section of whom are for the old and fatal policy of concessions of all kinds to the South "to save the Union." The ultra-Southerners are comparatively few, but violent, desperate, united men. The Republican party is far more numerous, but is neither hot nor cold,—does not know its own principles,—indeed, cannot, as a whole, take up the dignified ground of high principle at all, since its ranks are swelled by men who wail over the tendency to extremes, and sigh weakly for that peace which, in such cases, could only be enduring when gained as the fruit of strife and victory.

Nor is the Free North even so much as divided between a wavering and a staunch Anti-Slavery party. There is there an exceedingly important party of Northern Democrats, who are up to a certain point, purely Southern in their desire for the subordination of the Negro race, though, being free from the self-interested motives of the South, they have not yet reached the Southern extremes of insolence and wickedness. "Indiana," we are told, for instance, by one of its representatives in Congress, though a Free State, "would not "under any circumstances tolerate any measure designed to "elevate Negroes to political equality with the whites. Its "whole history and legislation go to confirm this opinion." Nor is Indiana an exceptional specimen of a Northern State.

What is the cause of a state of opinion so lamentable? The violence and insolence of the Abolitionist party, says the *Times*, who have driven States which were getting weary and disgusted with Slavery into antagonistic insolence. We fear this is one of those cases of conveniently attributing great and solemn results to inadequate and petty causes, which is itself a sign of complete inability to see the depth and significance of the strife. We do not wish to palliate a single word of injustice, a single proposition of wild and reckless character, which the Abolitionists may have put forth. We are fully aware that every such injustice does more injury to the party who are guilty of it than to the party against whom it is aimed. But we confess ourselves wholly unable to believe that the only party who have shown any sense of the awful magnitude of the question at issue, however much they may have sometimes lost self-control from the very excess of their own feeling, have been the main cause of the hard and shameless effrontery of the Southern States. When honourable members of Congress speak in the Senate House of a very calm and respectable, if somewhat heavy writer on the social evil of Slavery, as "*that North Carolina thief and* "*renegade, Helper*," we may surely suspect some deeper and worse root of the Pro-Slavery passion than just resentment against the exaggerations of Abolitionists. We have another Senator expressly testifying that no Abolitionist exaggerations have driven them to their present attitude. Hear Mr Mason, one of the Senators of Virginia. "Because "of the aggression committed by the servile States, commonly "called the Free States, upon the condition of the African "bondage of the South, the mind of the South has been "much turned towards it. By reason of that further "consideration, and pondering more deeply on the "relations subsisting between the African race of this "country and the white race, I believe that the opinion "once entertained, certainly in my State, by able and distin- "guished men, that the condition of African Slavery "was one more to be deplored than fostered, has "undergone a change; and that the uniform,—universal I "might say,—sentiment in my State is, that it is a blessing "to both races, one to be encouraged, cherished, and fos- "tered." This is a state of opinion deliberate enough for a statesmanlike defence of the Slavery view, if there were any man of sufficiently statesmanlike intellect to adopt it. The only excuse for the men who do adopt it is, that they appear to be men of narrow minds and small passions, who prefer challenging or caning an antagonist to overcoming him in debate. A really great mind fitted to lead the South at the present moment must have something of the diabolic in its disposition,—something of preference for evil,—or it could not fail to see that the whole constitution of society in America must be wrecked and shattered on this rock, before it can be reconstituted in any durable form, if the danger is not grappled with at once.

England can merely look on at this terrible,—we might even say tragic contest, were not the representative leaders in it in general formed on so petty a scale, so unconscious of their parts. But there is one case in which she can and ought to do more. If there be any of our own citizens (not yet naturalised in America) who are subjected to such brutal treatment as Tate in North Carolina or Power in South Carolina, England must firmly demand, and even compel, reparation;—for the outrages of Chinese braves and Mantchou Tartar militia are innocent and even praiseworthy, compared with the acts of these unjust Carolina judges, and the infamous mobs by which they are backed.

FRENCH AND ENGLISH TAXATION: ITS PRESSURE ON THE POOR.

THE more we read or hear of the allegations and proposals of the Financial Reformers, the more reason do we find to deplore that they are so exaggerated in their charges, so inaccurate in their statements, and so inconsiderate in

their suggestions of remedy and change. It is possible enough that public expenditure might be reduced without the public service suffering; that some readjustment of taxation might be contrived which should relieve the poor without injustice to the rich; that some reduction of the rates of duty on certain articles might be effected without reducing the yield of that article to the revenue; and that in some respects, and in some points of view, the fiscal burdens in this country are heavier and more irksome than in America or France. We cannot without further inquiry endorse or re-echo these various assertions; but, at all events, they are not *primâ facie* false. But when the assailers of our actual system of taxation think it necessary, as a preamble to justify their proposed measures of reform, to declare that the public expenditure is kept at its present high level in order to provide places and emoluments for the friends and relatives of those who are appointed to administer it; that our habit and our plan has been and is to relieve the richer classes, by throwing as far as possible the main burden of taxation on the poor; that our working classes are more hardly treated and more heavily taxed than those of any other land; that our Customs duties are so excessive as to cramp trade and fetter mercantile enterprise, and to defeat their own object by reducing their yield to the Exchequer; and that our timber duties, for example, are the direct cause of immorality and prostitution,—we regret, more than we can well express, to think that the promulgators of such exaggerated statements call themselves Economists and Free-traders *par excellence*, and profess to wear our livery and to combat by our side.

For the last twenty years the whole spirit and tendency of our fiscal legislation has been to transfer the pressure of taxation from the poor to the rich; during that period indirect taxes to the extent of ten millions per annum, which bore mainly on the working classes, have been repealed, and, in order to facilitate this repeal, direct taxes to the extent of from five to sixteen millions per annum have been imposed upon the comparatively wealthy,—in a word, property has voluntarily relieved industry to that enormous aggregate amount; our imports and exports have been doubled within the same twenty years, and now sometimes baffle the efforts of shipbuilders to keep pace with them,—so that it is impossible to believe they have been fatally checked by our Customs dues; indeed, consumption of imported commodities can scarcely have been seriously interfered with by these dues, since in spite of all reductions of the tariff, the revenue has continued to increase to such an extent as to indicate an actual doubling of consumption in nearly all dutiable articles; and, finally, while the duties on the luxuries and comforts of the community have been greatly reduced, those on the actual *necessaries* of life have in every instance been totally repealed.

Yet, in the face of all these notorious facts, the Financial Reformers still venture to go on repeating the same out-of-date and often-disproved charges—apparently forgetting that what was true in 1840 is false in 1860. We might not, however, have thought it necessary again to reiterate this vindication of our recent fiscal policy, had we not noticed in the "Report *adopted* by the Liverpool Financial Reform Association and read at Bradford," the following charge against indirect taxation, which exceeds in extravagance of language and groundlessness of assertion all previous accusations of the kind. "It lays (they write) "*heavy* duties on one of the principal materials for building;—"*hence* the wretched dwellings, the comfortless hovels, both in "town and country, which, by denying to the humbler classes "fitting accommodation, compel whole families to herd together "like brute beasts, blotting out all decencies in the family "circle, and sowing, in the very infancy of both sexes, the "seeds of future libertinism and prostitution." Now, as there are no taxes on glass, or bricks, or mortar, or slate, this passage can only be read as distinctly charging on the *timber duties* the crowded and scanty dwellings of the poor. Now what is the fact? This "heavy" duty is 7s 6d per 50 cubic feet of foreign timber, and 1s on the same amount of colonial timber. The timber chiefly used in the construction of cottage dwellings is colonial; and it has been shown that the total duty paid on the entire amount employed in building a four-room cottage is only 4s 3d,—the whole cost of the cottage being about 100*l*. That is to say, this "heavy duty," which entails all the horrible and immoral consequences ascribed to it, increases the cost of the poor man's dwelling less than *one quarter per cent.*, and raises his rent not more than *five-pence* a year!

The impression that our taxation is so contrived as to press far more heavily on the poor Englishman than on the poor Frenchman, is, we believe, as incorrect as many of the others to which we have just referred; but we have not the same decisive means of dissipating it. We have endeavoured, but without success, to obtain from competent authorities abroad an estimate of the proportion of indirect taxes borne by the working classes in France. We know, however, that they press very hardly both upon those who live only on the wages of labour and upon the smaller class of proprietors. And it is remarkable that, in a country where democracy has so often had supreme sway, and where even now it is flattered and courted to an extent unknown out of America, the character of fiscal legislation is rather to favour the rich than the poor. The taxes on articles of general consumption are almost always *specific* and not *ad valorem:* thus the wine or brandy of the labourer pays a far heavier tax in proportion to its value than the wine or brandy of the capitalist. The expenses, legal and fiscal, attendant on the succession to property, whether personal or real, are nearly uniform, *whatever be the value of the property inherited.* Thus, one-third of an estate worth 1,500 francs, it is calculated, is entirely eaten up by the expenses of a single succession; and after three deaths will have paid its entire value to the State; while the same charges are scarcely felt by a property of 150,000 francs.

But this is far from all or from the worst. Here, none of the necessaries of life are taxed: in France they all are. Not only is the price of everything enhanced by heavy protective duties—such as are now unknown in England, but every article of general consumption pays a heavy and almost ruinous *octroi*. The Englishman has his bread, his meat, his coal, free from any fiscal burden: the Frenchman pays heavy dues on his bread, meat, and firewood;—and, worst of all, his salt is subject to a heavy impost, payable by the rich and poor to just the same amount. It pays even now *ten* centimes per kilogramme: before the enthronement of the present Emperor, it paid no less than *thirty*. The correspondent—an Economist of the highest celebrity—who has kindly furnished the information we have just communicated, concludes with a remark which we transcribe for the benefit of those who would fain persuade us that England is a land specially composed of rich men who are for ever binding grievous burdens on the poor which they themselves will not touch with their little fingers. "Taxes on luxury," he says, "destined to strike the rich and to spare the poor, have been "sometimes attempted in France since the great Revolution, "but only at periods when luxury did not exist. They have, "therefore, always been speedily suppressed. *Now*, when "taxes of this sort *might* be made to yield something consider-"able, the intentions which the Government has manifested in "this direction have met with so determined an opposition that "they have been of necessity abandoned. The project of "establishing an income tax, which should reach specially all "large or moderate fortunes—(that is, one such as is willingly "endured in England)—encounters in France an obstacle "which has hitherto been regarded as insurmountable, in "the little reliance which could be placed on people's decla-"rations."

CRUELTIES ON BOARD AMERICAN SHIPS.

We last autumn called the attention of our readers to the frightful cruelties which from time to time are perpetrated on board American ships that arrive in this country, and to the impunity which the perpetrators of those atrocities now enjoy. We regret to have to return to the subject, but one of the most frightful tragedies which has ever occurred has, if the statements of the witnesses are to be relied on, lately happened on board one of these ships, and the actors in it will, in consequence of the defective state of international jurisprudence, go entirely unpunished.

The transaction to which we refer was this. Two American subjects, Edmund Lane and Gordon Hires, the first and second mates of an American barque named Anna, were, a few days since, charged before the magistrates of the Isle of

Wight with the murder of no less than six black seamen. The evidence of two other black seamen who remained alive on board the vessel was distinct as to the death of four of these; and there seems no doubt that if the investigation had not been cut short by the defects in the law, testimony equally specific might have been obtained with regard to the deaths of the other two. The circumstances of the alleged murders are too dreadful to be related in detail without necessity, and we shall only allude to them. On the 3rd July, Lane struck a black seaman, named Armstrong, with a mallet, and injured his left eye. The poor man seems to have been stunned by the blow, and unable for a long time to go on with his work as usual. While in this state, we are told "the second mate sent him "down on the martingale, under the bowsprit, to clean the "earring. He took hold of the earring, but could not clean "it; he was washed off the martingale, and towed along in the "water by the earring, which his arm was coiled round. "Abraham Rock went to his assistance. The chief mate was "on the jibboom, and as Rock was about to haul Armstrong "on board, he said, 'Don't haul that nigger in; cut the ear-"'ring and let him go.' About two minutes afterwards, Arm-"strong let go his hold, and was lost." A few days after, Hires was angry with a black seaman named Turtle, and stamped on his head so violently that he died in a very few hours. Almost before he was dead, if we can believe the evidence, Hires attacked another man named Johnson, and choked him with both hands, so that blood ran from his mouth. He died the same day, and "was "thrown overboard with Turtle." This might seem enough, but the narrative of the last murder should be given in the witness's own words:—"About seven days before we arrived "at Cowes, the man Frank also died. Two or three days "before his death I saw Lane, the chief mate, beat him. "Between 7 and 8 o'clock in the evening of the next day "Frank was at the wheel, and Lane, who was standing be-"hind him, said,—'If you go a quarter of a point off your "'course I'll murder you.' Directly afterwards he struck "him on the back of his head with a belaying-pin. He fell "on the spokes of the wheel, and there Lane continued to "beat him with the belaying-pin. Lane then called Rock "to relieve the wheel, and sent Frank, bleeding, to the "pump. Lane beat him for an hour, off and on, striking "him every three or four minutes. Frank called out "'Murder!' twice, he exclaimed 'Oh, God!' several "times, and he called once for the captain. Frank bled "very much, and appeared to lose his senses. He halloed "all night, and died about 12 o'clock the next night. The "day after Frank died he was thrown overboard, and in about "three hours afterwards we saw the Start Point."

If this evidence is to be believed, an American ship must now be considered to be beyond the reach of civilised law. Perhaps we might hesitate to believe it, if we did not know how frightful the half physical hatred of Southern Americans towards men of colour sometimes is. The persons accused did not, it would seem, deem it necessary even to hint at a proof of their innocence: they pleaded to the jurisdiction. Their attorney objected that the offences alleged were said to have been committed on the high seas on board a vessel not carrying the British flag, and, therefore, that the English law could take no cognisance of them. As such was indisputably the case, and as the law was certainly so, both Lane and Hires were properly dismissed by the magistrates, although not to the satisfaction of the crowd.

It would be idle to remark that a greater scandal on international jurisprudence can hardly at any time have happened. Even on the most favourable supposition,—that the facts were exaggerated, or that they were not true, the scandal is very great. Appalling charges were brought against persons belonging to a civilised country in the court of another civilised country,—the time and place at which the accusation was brought were the very best for the investigation of the truth,—all the necessary witnesses were in attendance,—every possible means of defence that the accused persons could wish for was at their disposal,—no unnecessary delay had occurred in making the charge, for it was brought as soon as the vessel neared the first shore,—the court was at least good enough for such people as these, for it is that on which we all rely for the daily administration of justice to ourselves; but, notwithstanding all this accumulation of facts, the court had to dismiss the case because the law gave them no jurisdiction to take cognisance.

Very much to his credit, the American Consul seems to have desired to do all that was in his power to bring the accused persons to justice. He requested the magistrates to return the men to the ship, and to assist him in detaining them there until he had himself made a sufficient investigation of the facts. The magistrates, however, were again compelled to decide that the law was defective; that they had no power to assent to his request; that Lane and Hires were simply free men, against whom nothing that English law can punish had been proved; that, in consequence, they might go where they would, and were entitled to be protected by the English law against any one who might try to harm them. Moreover, even if the request of the Consul had been complied with, and if he had made the most complete inquiry possible, we apprehend it would have been all so much useless trouble. We have, it is true, an extradition treaty with the United States, by which all persons accused of certain crimes may be given up to the American tribunals; but before they can so be given up, a preliminary investigation must have been made before an American court of competent jurisdiction; and we apprehend that a Consul who is not a judicial functionary is not, as the law now stands, empowered to make such an investigation. Besides, even if the investigation of the Consul had been sufficient, and even if, in compliance with the treaty of extradition, we had sent the alleged criminals back to their own country, we should have no power to send the witnesses there. It would be monstrous cruelty to send persons across the world merely because they had been the innocent spectators of painful facts. From the nature of the case, therefore, as well as from the defects of the law, the intervention of the Consul, though very creditable to his good feeling, must necessarily have been futile.

The truth is, as we showed at very great length in the article to which we have before alluded,* that the only place for an efficient investigation of any occurrences which are alleged to have taken place on board a vessel at sea, is the port at which such vessel arrives. A ship's crew, and a ship's passengers still more, are a number of persons collected for a short period and scattered ever after. If any useful conclusion is to be derived from their evidence, it must be taken *while* they are all together, *where* they can be confronted with one another, *where* there is the greatest opportunity for investigating the attendant details. Unless the judicial inquiry is made *at once* when the ship arrives in port, it would be futile—it would be either an ineffectual attempt to detect a crime, or an insufficient exculpation of persons unjustly accused of one.

We believe that negotiations are going on with the American Government to remedy this evil, and we have no doubt what the nature of the remedy ought to be. We believe that the courts of the two countries—of England and America—ought to be invested with such a jurisdiction over offences committed on board the ships of the two nations on the high seas, as would enable them to investigate whatever is said to have happened on board a ship which arrives at each of them respectively as soon as she arrives there. It has, indeed, sometimes been contended that the American Consul should have a jurisdiction here to judge of the alleged offence, and that the British Consul should have a corresponding jurisdiction assigned to him in America; but the facts of the present case show how improper and insufficient this remedy would be. An American ship arrives at Cowes, a small English port, in which there is no American Consul. There happens to be such a Consul across the water at Southampton, but he is in Paris, and would probably have never heard of the matter but for the investigation before the magistrates; and even if he had heard of it, is it to be expected that every American Consul, without any legal training, without judicial experience, without any organised bar of advocates, with no habits which would enable him to do so, would adequately sift the testimony of witnesses and decide conclusively questions of life and death? A Consul may be assumed to be a good man of business, but we have no right to expect him to be more; we have no ground for believing that he will be able to discriminate delicate shades of evidence, or to decide difficult questions of law. And it is needless to assign

* August 6, 1858.

to him any such duty. Good courts of justice exist both here and in America, and it is to them that the investigation of alleged crimes should be intrusted. And as Great Britain and America are to be put on a perfect equality, no fancied scruple of national honour need prevent either from assenting to such an arrangement.

COUNT CAVOUR'S RETURN TO OFFICE.

When last year we at once bitterly lamented and heartily approved the retirement of Count Cavour from office,—lamenting the causes which rendered it necessary, and approving the protest of the statesman against a policy he could not creditably support,—we had little hope that Italian affairs would take a favourable course. That the *interim* Ministry has acted as nearly as it dared on Cavour's policy, and has in fact simply smoothed his way back to a tenure of office not unlikely to prove more brilliant and fruitful of benefit to Italy than even his previous administrations,—must be laid entirely to the credit of the Italian people. It is evident, from the very confession of the Emperor of the French, that at the time of the peace of Villafranca he would not have been sorry to see the people of the Romagna return to their obedience,—under conditions of lay-government and better treatment,—and we conclude that the article in that treaty as to the exiled Dukes, and the pertinacity with which for a long time the Emperor of the French insisted on it, prove that in Central Italy also he feared the innovating tendencies of the new *régime*. If France has changed her view, and changed her whole tone,—if Count Cavour, whose retirement was held to indicate a humiliation of Sardinia before France, is now able to return with colleagues whose names are less Sardinian than Italian,—Mamiani, a member of the last constitutional Roman administration in 1848, and a native, we believe, of the Romagna,—Fanti, a representative of Central Italy,—Jacini, a Lombard of rising repute,—the change is due to nothing but the pertinacity with which the Italians have urged,—and we must add the openness of mind with which the Emperor of the French has appreciated,—the fact that Italy could no longer be turned into the meek tool, though she might become a valuable ally of France.

The Dabormida Ministry has fallen, we believe, more because they were felt to be an *ad interim* administration,—more because it was essential that Count Cavour and general Italian politicians of the highest note should assume the Government so soon as the Government should be in a position to act in the spirit of a powerful and independent nation,—than from any great shortcomings of their own. In foreign politics the administration clearly wavered,—probably unnecessarily wavered,—concerning the Regency of the Prince de Carignan; but they did much to repair their blunder by naming Count Cavour to represent them at the Congress. It is said that in home politics they have been less firm,—that they have shown a disposition to centralise, which has excited much popular odium, and a hesitation about calling together the Chambers which implied that they were afraid to face that odium. However this may be, there can be no doubt that directly the way was open for a bold resumption of Cavour's great national policy, Cavour only could have been called upon to resume it—and that way was no doubt opened by the dismissal of Count Walewski, the open difference between the Emperor and the Pope, and the implicit guarantee to Italy that the constitutional policy might take its way without any apprehension that French troops would hear either the Pope or the Archdukes back to their dominions.

This new turn in Sardinian affairs makes it more than ever the duty of England to insist on the policy of leaving Italy to herself. The Emperor of the French is a statesman of no ordinary ability; but, as we observed last week, he is apt to change rather too rapidly, so as to puzzle matter-of-fact politicians like the English. He has a policy when he ought to have none; he wants to set States to rights which can be only set to rights by being let alone. In short, he has views of reconstituting Europe; and, but for a great indisposition on our part to such schemes, and a rooted indisposition in Europe to being reconstituted, and a very sound mind of his own, which is quick to perceive this aversion, he would do much mischief. Even now, we fear, he is desirous to get England to endorse his views for Italy without first knowing them,—simply on the ground that he has proved that he desires Italian freedom. We are sure that our Ministers will be on their guard against this. Italy can manage far better for herself, with Count Cavour at the helm, than France can manage for her. If France and England simply keep their own and all other extra-Italian hands off Italy, they will do infinitely more for Italy than by any amount of regulative interference. It is the one fundamental vice of the French foreign policy. There is still reason to fear lest the scheme of Italian federation and other crotchets of the Emperor,—in spite of that Papal obstinacy, which has fortunately done so much to tire out the eldest son of the Church,—will be urged with very undesirable eagerness unless we throw into the other scale the dead-weight of English inertia. And now that we know that the most sagacious head in Europe is again guiding the policy of Piedmont, and therefore of Italy, we may be well content to pursue our non-intervention policy with even enthusiastic vigour.

COMPARATIVE TAXATION OF ENGLISHMEN.

The new number of the "Edinburgh Review" contains an elaborate and instructive article on the comparative pressure of taxation in this and other countries, and among different classes in this country. The amount of information conveyed is remarkable and its character is valuable, as it is evidently drawn from the best official sources, and has been put together and digested with scrupulous care. The writer expressly guards himself against being supposed to lay claim to any impossible accuracy, and even admits that some of his calculations and estimates may be open to dispute; but he is careful on every occasion to give both his data and his plan of using them, and distinctly warns the reader where his premises are necessarily incomplete and uncertain, and where his conclusions may possibly admit of question. We will transfer the principal results at which he has arrived to our columns,—without, of course, endorsing their accuracy. We do not doubt, however, that they are as much entitled to practical credence as can ever be the case with these refined statistical estimates, in which a slight modification of premises may effect a very great change in the result.

I. The article proves that the taxation of Great Britain, so far from being an increasing burden, has, since the Napoleonic wars, and even to some extent since the beginning of the century, been a decreasing one,—whether we estimate it with reference to the numbers or the wealth of the nation,—in proof of which we have the following tables:—

Table I.

	Population.	Revenue. £	Taxation per head. s	d
1801	15,800,000	34,113,000	43	0
1815	19,000,000	72,200,000	76	0
1821	21,200,000	55,800,000	52	6
1851	27,000,000	52,300,000	39	0
1858	30,000,000	61,812,000	41	2

Table II.

		Property. £	£	Revenue. £	Tax per cent.
1803	Real	1,063,000,000			
	Personal	800,000,000			
			1,863,000,000	38,600,000	2·07
1814	Real	1,650,000,000			
	Personal	1,200,000,000			
			2,850,000,000	71,000,000	2·49
1845	Real	2,300,000,000			
	Personal	2,200,000,000			
			4,500,000,000	53,000,000	1·18
1858	Real	3,200,000,000			
	Personal	2,775,000,000			
			5,975,000,000	61,800,000	1·034

This result is the more remarkable, as the revenue of the year 1858, which the writer has taken as his standard of the actual taxation of the United Kingdom, exceeded by nine millions that which was levied on the average of the ten years preceding the Russian war, and which may be regarded as our ordinary *peace* expenditure.

II. The writer in the Review is at great pains to state that comparisons of the relative pressure of taxation in different countries are always imperfect and liable to objection, and he explains at some length why this must be the case especially with regard to France—various items being included in the Imperial expenditure in one country and excluded in the other. Bearing in mind this preliminary caution, it would appear that the *revenue* raised in France reaches 39s 5d per head, and in England 44s 2d per head,

and the *expenditure* (exclusive of interest on the National Debt) 27s 5d in France, and 24s 3d in England. In the case of the United States,—State and local as well as Imperial taxation being here taken into account, in order to render the comparison as full and fair as possible,—the *revenue* reached 54s 3d per head, and 1·41 per cent. on the aggregate property of the nation, in England, against 28s 2d per head and 1·62 per cent. in America. The comparison of *expenditure* (exclusive of debt) was 34s 3d per head and ·89 per cent. on property in England, against 19s 10d and 1·14 per cent. in America. We are therefore more heavily taxed *per head* than either France or the United States, but less heavily in reference to our wealth or means of bearing taxation.

III. The third point insisted on in the article we are analysing is that—contrary to the popular assumption—indirect taxes *cost less to collect* than similar amounts levied by direct taxation—if fairly imposed, *i. e.*, made payable by all classes in proportion to their means. It appears, *first*, that our Customs duties and Excise are levied at a steadily diminishing cost,—the expense of collecting the former having fallen from 5½ per cent. in 1839 to about 4 per cent. in 1858:—*secondly*, that *with* the warehousing system (a mere arrangement for mercantile convenience) the present cost of collecting twenty-four millions of Customs revenue is only four per cent., and *without* this system, only *three*,—whereas in America it is 7¾ per cent., and in France fully 16 per cent.:—and *thirdly*, that our present direct taxes cost from 3 to 4 per cent. to collect, and, if levied on all classes and all incomes as proposed by the Financial Reformers, would cost at least 5 per cent., and indeed could not be collected at all. This division of the reviewer's argument is elucidated by some very clear and forcible remarks on the *comfort* of indirect taxation to all taxpayers, as well as on its superior fairness, as being the only means of reaching the working classes without harassing them.

IV. The fourth result worked out is the relative proportions of the gross taxation paid by the working classes on the one hand, and the middle and the upper ranks on the other—between the possessors of property and day and weekly labourers, in fact. The conclusion—in which, though we do not endorse it, we have as yet discovered no flaw—will interest many of our readers. It appears from the tables and calculations, given, that out of a total taxation, imperial and local, of 76,000,000*l*, the propertied classes—7,500,000 in number, and possessing an aggregate income of 320,000,000*l*—pay, 51,500,000*l*;—and the working classes—22,500,000 in number, and with an aggregate income of 225,000,000*l*—pay, 24,500,000*l*. That is, the former pay 6*l* 17s 4d per head, or 16 per cent. of their annual income, and the latter only 22s per head, or not quite 11 per cent. of their income. We annex the table on which this conclusion is mainly grounded:—

TABLE III.

	Propertied Classes.	£	Working Classes.	£

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

(FROM A CORRESPONDENT.)

III.

(CONTINUED FROM JAN. 14.)

HAVING thus examined, with some degree of minuteness, the various details of crime in the different police districts of England and Wales for the year 1858, viewed positively, and apart from all considerations of population; the next step appears to be, to see what results present themselves when this element enters into combination with the figures, viz.—proportion. The following tables have been compiled from Mr Redgrave's returns, with the intention of exhibiting crime in proportion to population. With this design—and these details, or similar ones, would enrich the volume of Judicial Statistics for future years—the proportion to the population of each police district will be indicated (1) of the known criminal class; (2) of the number of persons proceeded against, either by indictment or summarily.

From a calculation, based upon official tables, it appears that, for the entire population of England and Wales—

There exists 1 acknowledged member of the criminal class to each 137 of the population;

And that 1 person out of every 41 has been proceeded against in the courts of justice during the year 1858.

From these tables, then, may be arranged, in the first place, the two following lists, from which it will be at once perceived in which police districts the numbers of the known criminal classes in proportion to the population are above the average for England and Wales, and in which counties the numbers fall below the average. The average for the entire population being one criminal to every 137 persons, it follows that—

ABOVE THE AVERAGE.

Are	Proportion to Population.	
1. Warwick	1 in every	55
2. Southampton	—	55
3. Rutland	—	58
4. Nottingham	—	66
5. Worcester	—	66
6. Bedford	—	72
7. Bucks	—	72
8. Berks	—	79
9. Stafford	—	81
10. Dorset	—	85
11. Herts	—	89
12. Cambridge	—	89
13. Leicester	—	89
14. Essex	—	92
15. Norfolk	—	96
16. Monmouth	—	108
17. Derby	—	115
18. Huntingdon	—	116
19. Sussex	—	117
20. Devon	—	134
21. Lincoln	—	136

BELOW THE AVERAGE.

Are	Proportion to Population.	
22. Wilts	1 in every	140
23. Suffolk	—	145
24. Surrey	—	153
25. Durham	—	156
26. Wales	—	159
27. Hereford	—	164
28. Somerset	—	166
29. Lancashire	—	170
30. Metropolis	—	176
31. Gloucester	—	177
32. Salop	—	181
33. Kent	—	186
34. Northumberland	—	197
35. Cumberland	—	198
36. Westmorland	—	201
37. Northampton	—	216
38. Cheshire	—	219
39. Oxford	—	230
40. York	—	233
41. Cornwall	—	262

In the next place, the police districts may be arranged according to the proportion to the population, of the total number of persons in each county judicially proceeded against, either summarily or upon indictment, in the year 1858. The average for England and Wales is 1 act of procedure to every 41 of the inhabitants. Hence, it follows that the first 8 counties are above the average proportion, and the last 33 are below it:—

ABOVE THE AVERAGE.

	Proportion.		Proportion.
1. Metropolitan district	1 in 23	5. Stafford	1 in 32
2. Lancashire	— 24	6. Monmouth	— 35
3. Durham	— 27	7. Cheshire	— 39
4. Northumberland	— 30	8. Salop	— 40

BELOW THE AVERAGE.

	Proportion.		Proportion.
9. Somersetshire	1 in 47	26. Cambridge	1 in 69
10. York	— 47	27. Lincoln	— 71
11. Worcester	— 48	28. Northampton	— 71
12. Wales	— 49	29. Westmorland	— 72
13. Huntingdon	— 55	30. Kent	— 75
14. Nottingham	— 55	31. Oxford	— 78
15. Cumberland	— 56	32. Bedford	— 83
16. Gloucester	— 58	33. Suffolk	— 89
17. Surrey	— 58	34. Norfolk	— 90
18. Berks	— 59	35. Cornwall	— 92
19. Hereford	— 59	36. Devon	— 94
20. Southampton	— 59	37. Essex	— 94
21. Warwick	— 60	38. Wilts	— 97
22. Leicester	— 61	39. Rutland	— 98
23. Berks	— 63	40. Sussex	— 98
24. Herts	— 64	41. Dorset	— 133
25. Derby	— 66		

It requires but a superficial consideration of these two lists, and a comparison of both with the Statistics from which they are derived, to perceive,—although our ignorance of a certain integral portion of our population is less great than formerly—how little we really know of our criminal classes. Both the above tables possess a certain specific value of their own. Both are to a certain point indicative of the extent of crime. We are bound to consider that the information both convey, so far as they publish facts, is absolutely correct. And yet it is hardly not too much to affirm of both, that they are as much at variance with, if not contradictory to, each other, as they possibly could be. The second list, that, viz., which shows the proportion of the number of persons proceeded against to the population, is, of the two, the one more to be

relied upon as a proof of the ravages of our criminal population. It is based, it is true, only upon the records of detected crime—and hence only exposes a portion of the disease. Yet, as far as it goes, the list is an unimpeachable witness, and the facts to which it bears evidence are of the first importance. A comparison of this table with the one which concerns the number of known criminals, proves how very incomplete and imperfect is the last. It shows how little we really know of the number of the criminal classes. It proves that we are only beginning to recognise the existence, and the extent, of such a population. A glance at the estimated averages, in both lists, for England and Wales, is sufficient to shew this. It cannot indeed be safely said that 1 person in every 41 passes through the hands of the police in the course of the year; whilst only 1 in every 137 is registered as a known criminal, at large, in the official records; because, in all probability, the average of prosecutions is greatly increased by the repeated offences of professional criminals. Each professional criminal, no doubt, undergoes more than one prosecution, on an average, yearly. But, even after allowing fully for this, the disproportion between these results is most obvious. Nor is there more than a single method to account for it—the alarming state of our ignorance of the criminal population. The fact that many persons of good character are proceeded against for the first time, would, of course, tend to equalise these averages; though, with all the allowance which can be made, the proportions appear to be hopelessly incongruous.

A comparison of some of the details of these two catalogues will indicate our want of accurate information on this matter. In the list of districts arranged according to the case of procedure, there are eight which stand above the proportional average of crime:—the Metropolis, Lancashire, Durham, Northumberland, Stafford, Monmouth, Cheshire, and Salop. Only two of these occupy a similar position in the table which shows their relative position according to the population of acknowledged criminals; and these are Monmouth and Stafford. Again:—the Metropolis with 1 case of procedure to every 23 inhabitants, can note but 1 in 178 of her inhabitants as a recognised law-breaker; the proportion being upwards of 1 to 7. Lancashire, with 1 case of procedure to 24 persons, knows but 1 man in 170 to be a professional outlaw; the proportion being, again, 1 to 7. Again, in Cheshire the proportion of cases of criminal adjudication to those of criminal profession is 1 to 5: in Durham and York, it is the same: in Northumberland, it is 1 to 6: in Salop, 1 to 4: in Cumberland, Wales, Westmorland, Northampton, Somerset, and others, 1 to 3. But these relative proportions are not always preserved. In some cases they are materially modified: in others, they are completely altered, and the tables are altogether turned. This is mainly noticeable in the agricultural districts. For example, in Berks, Bucks, Cambridge, Norfolk, Herts, Worcester, and some other counties, the proportionate number of cases proceeded against judicially and of known criminals are very nearly identical. And, again, in other countries, *e. g.*, Bedford, Essex, Warwick, &c., the proportions are positively, and to a slight degree, reversed. These, exceptions, however, do not invalidate the general and clearly-defined law of social politics, that the number of the population of the acknowledged criminal classes of the country bears but a small proportion to the numbers of those who are objects of procedure in our courts of justice. Naturally, we may expect that in future years, with a police establishment more entirely organised, and more experienced in their work, this proportion will decrease, until what is at present the exception, in a few cases, becomes the law in most, or all: when, namely, the proportional numbers of known criminals surpasses those of criminal adjudication. Then our recognised and professional class of law-breakers will be so exactly known, that fewer acts of depredation will be committed with impunity, before detection. Then shall we be in a more fit position to deal with crime as a malady of which we know the extent, and shall be enabled to take more certain measures, if not for its cure, at least for its determent. Meanwhile, the above tables, apart, and of themselves, notwithstanding their necessary imperfections, are sufficiently valuable, as containing information previously unknown, to warrant publicity; as containing too, the elements of knowledge on which may be based a more exhaustive and a more perfect system of criminal legislation.

INQUIRER.

[TO BE CONTINUED.]

Agriculture.

AGRICULTURAL PROGRESS AND WAGES.

WITHIN the last ten years that change in husbandry, which has increased its productiveness at a less relative cost, has been going on with a constantly accelerating speed. The demand for consumption of agricultural produce, competition, and agricultural enterprise, have all combined to effect in husbandry that alteration which had long before taken place in manufactures and commerce, and which has rendered agriculture a pursuit demanding the application of more capital and intelligence than at any former period. A paper was recently read by Mr John C. Morton, at the Society of Arts, on "The Forces used in Agriculture," which dealt very ably with the changes of modern husbandry and many of their incidental effects.

The forces referred to are, naturally, steam-power, horse-power, and manual labour, all now largely employed in English agriculture; and one object of the paper was to "point out the extensive fields open, especially to the first and last of them, in the agriculture of the future." There are three classes of operations on the farm which correspond to these forces. First, purely mechanical force, which may be more extensively used with nearly every permanent improvement of the land which tends to give uniformity to its condition, and is supplied by the steam-engine. Secondly, force derived from horses, required where crooked hedge-rows and other obstacles prevent uniform action, and which constantly diminishes as the more uniform power of steam can be applied in farm operations. Thirdly, in operations requiring more exercise of the will, but less actual power, the only competent force is that directed from moment to moment by the human mind—manual labour. The course of modern agricultural improvement points to the extension of the first and last of these forces, and to the diminution of horse labour. And the experience of improved farms confirms this. Mr Morton reduces these forces to "horse-power"—the term used in reference to steam-engines, *i.e.*, the unity assumed as equal to pull or lift 33,000 lbs one foot per minute; and with this assumption the experience of agricultural horse-power agrees. By calculations given, the cost of steam-power is estimated at 3d per hour, while the cost of horse labour is 5½d per horse-power per hour, and the steam-power can be continued for much more lengthened periods than the horse labour. So that the force supplied by steam "horse-power" at 3d per hour, is nearly twice as great as that supplied by actual horse-power at 5½d per hour. And where steam-power can be used, the quality of the work performed by its aid is superior to that done by horse-power. This applies to thrashing, chaff-cutting, grinding, and like, and seems equally applicable to steam ploughing. How this will operate on farm labourers, and on the supply of labour in husbandry, are questions of paramount importance.

By comparing the mere force of manual labour with the two other forces, it is found that to do the work of the steam-engine 66 men would be required at 15s per hour, and to do the work of the horse-power 32 men would be required at 8s per hour. Competition of manual labour as a force, with steam or horse-power, is, therefore, obviously out of the question. "It is in the cultivation not so much of mere strength of body, as of skill and intelligence, that the safety of the labourer lies, and in his capability of education he is perfectly secure." After giving some calculations for the conversion into steam-given force of all the work of several specified farms performed with horses, the conclusion is arrived at, "that by steam-power at least three out of every seven horses on arable land may be dispensed with all the year, at a cost not exceeding the cost of these horses during the three or four months when alone they are really needed on the land." This, of course, makes the best case for steam ploughing. In practice, most farmers would probably have to make some deduction for this estimate. It is clear, however, that the steam-engine supplies most effectively all the mere force wanted in agriculture, wheresoever it is capable of application. More manual labour was probably used on each acre of cultivated land a hundred years ago than now; but there are now more acres under cultivation, and wheat and meat are produced at lower rates and in greatly increased quantities now than then. Numerous instances are cited to prove that where a steam-engine is employed on a farm, it forms part of a system which employs most labourers in agriculture, and in all cases with a reduction of horses. Wages in husbandry are notoriously advancing, so much so as to form the subject of complaint and apprehension on the part of some farmers. Mr Morton, ten years ago, obtained returns of the rate of wages from 93 farmers residing in 12 Scotch and 35 English counties and he had, just before the time of his lecture, obtained similar returns from the same districts. As samples of the differences which he stated, we may mention the following. In Aberdeenshire, the wages of ploughmen in 1849 were 16*l* with board and lodging; in 1859, 22*l*, also with board and lodging. In East Lothian, wages ten years ago were 10s per week; now they range from 12s to 15s a week. In Northumberland, wages which ten years since amounted to 12s weekly with cottage and garden and carriage of coals free, are now 15s a week also with cottage and garden and carriage of coals. In Leicester, wages have advanced in the ten years from 8s and 10s to 11s and 12s a week. In Oxfordshire, carters and shepherds, who have cottages rent free, find their wages advanced from 8s weekly to 12s and 14s. In Wiltshire, a county of low wages, wages have only risen from 6s and 7s to 8s per week for ordinary labourers in the course of the ten years. In Kent, they have advanced from 9s and 10s to 11s and 12s a week; in Devonshire, from 8s and 9s to 10s and 12s; in Dorsetshire, from 7s and 8s to 9s; and in Cornwall, 8s and 9s to 10s and 12s. These figures show a general and substantial advance to have taken place in the wages of labourers in husbandry during the last ten years. At the same time, on all farms where the steam-engine is brought into general use, there are always men who, from their skill and intelligence, earn considerably higher wages than the rates specified as prevailing in the several districts, which may be taken to be the wages paid to ordinary

unskilled labourers in husbandry. Where men are said to have been scarce during the last summer, farmers who adopted the simple plan of offering higher wages found no difficulty in obtaining as many hands as they required. This, with better cottage accommodation and constant employment through the year, will secure ample supplies of agricultural labour. Mr Morton then refers to the different modes in which wages, in form partly of money and partly in money's worth, are paid in some districts, and says as the result:—"The direct payment of a stipulated sum of money for stipulated services to be rendered is, of any plan of wages, the least liable to abuse; but it is at the same time that which furnishes the least scope of any for the establishment of friendly relations between masters and men." It is, however, to the young men that money wages the are most attractive, and the young and unmarried labourers are those who at the present time are availing themselves of the numerous openings offered in other employments, and deserting husbandry. This suggests the impolicy of the system which exists in some agricultural districts of lodging young men and lads in and about the homestead, and then every Michaelmas having a complete change, a system injurious alike to men and masters. The intelligent farmer will endeavour to correct this, by his personal demeanour to his men, and by exercising a kindly yet efficient control over his younger labourers, giving them at the same time time fully what their services are worth. We have known cases in which farmers have parted with most useful lads at the end of a yearly hiring rather than give some trifling advance of wages. All these points, however, must be dealt with by farmers according to their own lights. Nobody else can usefully interfere in the matter. The duties towards his labourers are altogether personal on the part of the farmer. He alone can encourage good conduct and willing services; and the notion that any transfer of such duties can be made to other persons or to societies is simply absurd. On this subject Mr Morton says:—"There are societies long established in England for distinguishing the worthy among agricultural labourers by public testimony to their worth. If that worth had shown itself in public-spirited conduct, nothing could be more appropriate than a public acknowledgment of it. When it is, however, only personal and domestic worth (far more worthy, let us all admit, than the other), nothing can be more grotesquely out of place." This is the common-sense view of the subject. It is not a sort of paternal relationship which the farmer bears towards his labourers, but that of employer and employed, giving scope for much useful control and kindly intercourse, and altogether excluding that sort of childish interference implied in the system of prize-giving. Justly does Mr Morton say,—"That the more we encourage genuine individual manliness in our labourers, with its effort after real self-improvement in intelligence and skill, and its higher sense of individual responsibility, the more likely are we to attach the young men to us, and to obtain labour of the kind of which steam-power is rapidly proving the necessity. This is not to be done, either by taking all the difficulties of his position out of the way, or by offering rewards to him proper only to the qualities and condition of a child." Henceforth "the services of the labourer will more and more require the combination of skill with mere force, and that a larger number of well-qualified men is being and will be needed, seems plain." What is this but a statement of the fact that farming is year by year becoming more and more of a manufacturing business? We have constantly impressed this important view on the owners and occupiers of land, and we have long urged them to prepare themselves for the inevitable changes the business of husbandry is undergoing, by the adoption of rational and commercial principles in the contracts they enter into with each other for the occupation and management of farms.

Literature.

Revelations Historiques, en réponse au livre de Lord Normanby, intitulé "A Year of Revolution in Paris." Par Louis Blanc. Ouvrage d'abord publié en anglais par l'auteur, et, dans la traduction en francais faite par lui-meme, augmenté de près du double. 2 Vols. Bruxelles: Meline, Cas, et Cie. 1859.

The additions made by M. Louis Blanc to his "Historic Revelations," in translating it into French, give it sufficiently the character of a new book to justify a second notice of it in these columns. We do not propose to enter into any discussion of the points in controversy between the author and Lord Normanby. Though in some particulars, M. Louis Blanc's explanations seem to us to halt, no serious imputation can rest upon his personal honour and patriotism. With the best motives, however, his conduct as a member of the Provisional Government is, we think, chargeable with grave errors and indiscretions, not flowing altogether, or necessarily, from the mistakes (as they appear to us) of his theories of society and government.

The Provisional Government, if not as originally constituted, yet at all events on the day after its first formation consisted of the following eleven members:—Dupont (de l'Eure), Arago, Ledru-Rollin, Lamartine, Marie, Garnier-Pagès, Crémieux, Armand-Marrast, Louis Blanc, Flocon, and Albert. Of these, Arago, Ledru-Rollin, Flocon, Louis Blanc, and Albert belonged to the extreme section, Armand-Marrast, Lamartine, Marie, and Cremieux to the moderate section, of the Republican party. The venerable Dupont (de l'Eure), who had formed one of the eleven members of the Provisional Government of July, 1830, and M. Garnier-Pagès, were theoretically, and apart from the immediate pressure of events, inclined to the Lafayette doctrine of a "Monarchy surrounded by Republican institutions." One of the movement-party in the ministry of August, 1830, Dupont (de l'Eure) was, with perfect consistency, a member of the *parti de resistance* in the cabinet of February, 1848. The heterogeneous elements of which this ministry was composed did, no doubt, tend (to use M. Louis Blanc's phrase) "to save the situation by preserving the different forces of society in equilibrium." (Vol. i., p. 324.) It gave occasion, however, to dissensions and compromises, which were in the end fatal, not only to the Republic, but to liberty and order in France. The first difference of opinion arose upon the first question which presented itself for discussion: Should a Republic be at once proclaimed or not? We agree with M. Louis Blanc in wondering how such a discussion could arise, though for very different reasons from those which influence him. The arguments that only Paris had as yet pronounced, and that in no formal way; that Paris is not France; and that to take the step proposed was unjustifiably to anticipate the decision of the nation at large,—these considerations, urged by one section of the cabinet, seem to us to rest on the firmest basis both of political reason and of political morality. The answer which M. Louis Blanc and his friends held to be satisfactory, is a curious illustration of the weight which, even in honest and intelligent minds, a preconceived conclusion will give to the flimsiest apologies for reasons:—

"You say," argued Messrs Ledru-Rollin, Flocon, and Louis Blanc, "that Paris is not France: let us understand each other. Whether the enormous preponderance given to Paris by our existing system of centralisation be a good or an evil, is not now the question; what is beyond dispute is, that since all France passes into Paris, Paris is to the provinces what the sea is to the rivers which flow into it. Through Paris France speaks, if by France you mean that which represents its true instincts and constitutes its genius. A Republican Government being that which derives its legitimacy from the national will alone, expressed in a normal manner, in contrast with a Monarchical Government, which rests on the *tacit*, that is to say the *supposed*, consent of the people, it is clear that the terms 'sovereignty of the people' and 'republic' are identical (*sont des termes qui rentrent l'un dans l'autre*). The entire nation cannot reject the republican form without thereby abdicating its own sovereignty, without committing suicide; nay more, without scandalously confiscating the rights of generations unborn; whence the conclusion, that in proclaiming the Republic, Paris does what France cannot undo by means of universal suffrage, except on condition of destroying it. Here you have the theoretic side of the question." (Vol. i., pp. 92-3.)

When he is dealing with the *coup d'état* (or, as he prefers to call it, the *crime d'état*) of the 2nd December, M. Louis Blanc can deplore the "excessive centralisation which makes the fate of a nation dependent on that of a single town." (Vol. i., p. 113). The fact, which, right or wrong, is to be received as a fact, when it tells in favour of the theories of Louis Blanc, ought to be combated when it serves the ambition of Louis Bonaparte. In truth, in political opinion Paris is not France; and notoriously was not so in 1848. This M. Louis Blanc admits in several parts of his work. "The majority of the departments in February, 1848," he says, "were still monarchical; they had learned the advent of the Republic with a kind of stupor; they recognised it rather than welcomed it." (Vol. ii., p. 7). A little further on he laments "the empire of monarchical prejudices over four-fifths of the nation, the intellectual night in which the rural districts were involved, the numerical feebleness of the Republican party," &c. (Vol. ii., p. 11). The result of the elections to the National Assembly confirms this description. In spite of Government influence, zealously used, out of 900 members, 150 belonged to the Legitimist party, 300 were Orleanists. The decree, which he signed establishing universal suffrage and fixing an early day for the election, he describes as "a premature homage to a principle" of which he desired the triumph; and he censures the "precipitation which gave to the peasants an arm with which he foresaw they would wound themselves."

The enormous fault which the Provisional Government had committed in precipitating the elections was clear from the first. On the 4th of May, one had only to glance at the right benches [of the National Assembly] in order to see that universal suffrage had transported political power from Paris to the provinces, from the most enlightened portion of France to that which was least so. The first effect of universal suffrage was nothing but the victory of the rural districts, the abode of ignorance, over a city, the radiant focus of light. (Vol. ii., p. 73.)

If the most enlightened part of France is to be secured a supremacy over the most ignorant, it is difficult to see on what ground of consistent theory the most enlightened *classes*, the nobility and the *bourgeoisie*, can be denied a similar preponderance. The theory of virtual as opposed to that of numerical representation, which M. Louis Blanc seems, for the nonce, to adopt, when he speaks of Paris—in opposition to the provinces—as the embodiment of "the true instincts and genius" of France, involves the very doctrine of that balance of power on which a constitutional monarchy depends, and is logically quite undemocratic. In recommending the unconditional proclamation of a Republic, and the assumption of dictatorical powers by the Provincial Govern-

ment for the carrying into effect of such political and social reforms as they might decide on,—or, as he expresses it, for "doing all the good they could,"—and in urging the postponement of the elections with a view to the more unrestrained exercise of this dictatorship,—thus leaving the National Assembly and the nation only the alternative of acquiescing in democracy and socialism as *faits accomplis*, or overthrowing them by another revolution, peaceful or violent,—M. Louis Blanc advocated a *coup d'etat* in its essence logically similar to that which placed the present Emperor on his throne. To subjugate the higher and middle classes and the artisans of Paris by means of the peasantry, does not *in se* differ from the subjugation of the higher and middle classes and the peasantry by the artisans of Paris. The former, to be sure, has this to be said in its favour, that it is consistent with, while the latter violates, the democratic theory of the representation of mere numbers, which Louis Blanc and Louis Bonaparte both espouse,—the one in the interests of despotism, the other of socialism. The argument that a nation cannot, by the exercise of universal suffrage, consistently establish any other form of government than a democratic republic, is too trifling to require refutation. As a matter of fact, the National Assembly, elected by universal suffrage, *did* abolish that suffrage. Classes and individuals may be wise enough to lay aside powers which they feel they are not wise enough properly to exercise. They may decline a greatness which has been thrust upon them. If we can suppose a community originating (as no community ever did) in a social contract (*i.e.* by universal suffrage), we can imagine them establishing conditions of property, or education, or other limitations, for the exercise of political trusts, as for any other office, without committing logical suicide. In his "Histoire de Dix Ans" (Introduction, § 1, note), M. Louis Blanc distinguishes "the people" from the *bourgeoisie* as follows:—"The *people* is the *ensemble* of citizens, who, not possessing capital, are dependent on others completely, even in what concerns the first necessaries of life." His practical use of the term is even narrower: the people of France are the artisans of Paris. The twofold error of confounding their wishes with the will of the nation, and thinking that it was the duty of the Provisional Government not "to confine itself to the immediate convocation of the National Assembly," and to administrative details of urgent necessity, but on the contrary *sauf à en répondre sur nos tetes*, "to undertake the initiative of vast reforms," led him into very grave practical mistakes. M. de Lamartine's answer to his demand (in support of the petition of a deputation of artisans) for the creation of a Ministry of Labour,—that the Provisional Government was not a constituent power, put the matter on its true footing. The vast socialistic demonstration of the 16th of April, got up by Louis Blanc's aid, though not intended to intimidate the Government, was unfortunately like an attempt to do so. Taken in conjunction with his advocacy of immediate measures for the organisation of labour, with his proposal of the assumption of dictatorial power by the Provisional Government, with his recommendation of the postponement of the elections, with his demand for the removal of the troops, and with his devotion to and popularity with the artisan class,—it not unnaturally suggested the idea that he meditated a socialistic *coup d'état*. This unfortunate step gave a handle to those who succeeded, by false testimony, in involving him in the outbreak of the 15th May, and compelled him to seek safety in flight. These and similar mistakes were natural, perhaps, in the case of an ardent theorist and enthusiast, suddenly elevated to a position which seemed to offer him the opportunity of carrying into effect the cherished dreams of his life. But that they were mistakes, not even our sincere respect for M. Louis Blanc's great abilities, disinterestedness, and patriotism, will allow us to doubt.

THE RECREATIONS OF A COUNTRY PARSON. John W. Parker and Son, West Strand.

A COUNTRY PARSON, of fair abilities, a reflective turn of mind, industrious habits, and a kindly disposition, has from time to time employed his leisure hours in writing articles for "Fraser's Magazine" and other periodicals: these he has now collected and published separately, giving to them a connected form, by the addition of an introductory account of himself, of his way of life, and his aim in writing. Mr Helps is, it would seem, his model; and we think we cannot give him any more acceptable praise than by saying that he not only reminds us of that admirable essayist, but even at times almost equals him in subtilty, shrewdness, good-humoured raillery, and the art of showing up the private weaknesses and cherished self-deceptions of human nature. After saying this, however, we are bound to add, that in force, in directness of purpose, in beauty of style, and in depth of thought, he is far inferior to the author he so much admires. His theory of essay writing has something to do with this; his own nature, a good deal more. "Let us have no meanderings," was the favourite sentiment of a certain old lady—not so of our essayist; he meanders greatly, he dilutes a thought with numberless illustrations and digressions, goes off from it into quite other subjects, returns to it again with fresh vigour, and not unfrequently, like a cat playing with a mouse, ends by losing it altogether. The loss, however, causes him no serious discomposure; another is soon found, and is treated in the same desultory, but pleasant fashion. "Such," he says, "is the happiness of the writer of essays: he may wander about the world of thought at his will. The style of the essayist has attained what may be esteemed the perfection of freedom, when it permits him, in writing upon any subject whatever, to say whatever may occur to him upon any other subject."

The perfection of freedom is, we venture to suggest, inconsistent with perfection of another kind. His readers may be disposed to join in the poet's sentiment,—"Me, this unchartered freedom tires." There may be "a delightful freedom about the feeling that you are producing an entirely unsymmetrical composition;" but the composition that has cost its writer least trouble often causes most to the reader, who may not find an entirely unsymmetrical the most delightful of forms, even for an essay. In a later portion of his book, while defending himself with much good temper from the sharp and clever criticisms of a contemporary, he brings forward many valid reasons for allowing a degree of latitude to the writer of essays that would not be tolerated in most other forms of composition, but scarcely for so great a latitude as that in which he indulges.

The writer's great reason for saying something of the scenery amid which he is writing is, that he believes that it materially affects the thought produced, and ought to be taken in connection with it. You would not give a just idea of a country house by giving us an architect's elevation of its façade, and showing nothing of the hills by which it is backed, and the trees and shubberies by which it is surrounded. So too, with thought. We think in time and space, and unless you are a very great man, writing a book like Butler's Analogy, the outward scenes amid which you write will colour all your abstract thoughts. Most people hate abstract thought. Give it in a setting of scene and circumstances, and *then* ordinary folks will acccept it. Set a number of essays in a story, however slight, and hundreds will read them who would never have looked twice at the bare essays. Human interest and a sense of reality are thus communicated. When one says to me, "I think thus and thus of some abstract topic," I like to say to say to him, "Tell me where you thought it, how you thought it, what you were looking at when you thought it, and to whom you talked about it." I deny that in essays, what is wanted is results.

One result, desired we conceive by every writer, is that his thoughts should be apprehended by his readers,—a result that is likely to be considerably endangered by a too liberal application of the above theory, many readers not having our author's taste for minutiæ, or the requisite time and patience.

Let us now look a little closer at the subject-matter of these essays. The first thing that strikes us is, that if, as the "Recreations of a Country Parson," they were not bound to avoid as far as possible all resemblance to his weekly sermon, they might have found an appropriate heading in "Despise not thou the day of small things." The petty irritations, small vexations and disappointments, the plagues and "blisters of humanity,"

> "The weariness, the fever, and the fret,
> Here where men sit and hear each other moan,"

form its chief topics, and are discussed with a benevolent eye to their alleviation or removal by the suggestions of a half playful philosophy, and a little of that charity that thinketh no evil. "The Art of Putting Things" is the theme of his first essay,—an art the writer practises himself with considerable success. He puts the worries of life in their lightest, and in fact their truest aspect; while he enforces the too often overlooked and counterbalancing little pleasures, comforts, and satisfactions. The lesson he early learnt in his father's study he endeavours to teach to others, in a rambling, it is true, but in this case decidedly readable fashion. The style of the whole book is pretty fairly represented in the following extract:—

You remember how Robinson Crusoe, in his cheerful moods, put his island home. He sat down to his lonely meal, but *that* was not how he put things. No. "Here was my majesty, all alone by myself, attended by my servants": his servants being the dog, parrot, and cat. I remember how a wealthy merchant, a man quite of the city as opposed to the country, once talked of emigrating to America, and buying an immense tract of land, where he and his family should lead a simple, inartificial, innocent life. He was not the least cut out for such a life, and would have been miserable in it, but he was fascinated with the notion because he put it thus: "I shall have great flocks and herds, and live in a tent *like Abraham's!*" And *that* way of putting things brought up before the busy man of the nineteenth century I know not what sweet pictures of a primevally quiet and happy life. I can remember yet how, when I crept about my father's study, a little boy of three years old, I felt the magic of the art of putting things. All children are restless. It is impossible for them to remain still, and we all know how a child in a study worries the busy scholar. All admonitions to keep quiet failed; it was really impossible to obey them. Creep creep about; upset footstools, pull off table covers; upset ink. But when the thing was put in a different way, when the kind voice said, "Now, you'll be my little dog: creep into your house there under the table, and lie quite still," there was no difficulty in obeying that command; and except an occasional bow-wow, there was perfect stillness. The art of putting things had prevailed. It was necessary to keep still; for a dog in a study, I knew, must keep still, and I was a dog.

Besides this essay, we think those "Concerning Work and Play," a plea for bodily and mental recreation; "Concerning Country Houses and a Country Life," a subject on which the author writes with his whole heart; "Concerning Tidiness," "being thoughts on an overlooked source of human content"; and "Concerning Hurry and Leisure," are the best in a volume which, without being either profound or brilliant, or remarkable

in any way, will, we think, win the approbation and liking of many readers by its thoughtful good sense and kindly spirit.

JULIAN HOME: A Tale of College Life. By FREDERIC W. FARRAR, M.A., Fellow of Trinity College, Cambridge. Edinburgh: Adam and Charles Black.

THE clever author of "Eric" has here tried his hand on the oft-attempted theme of College Life. We doubt if any treatment of that subject could possibly have the attractive freshness of tales of schoolboy experiences such as "Tom Brown" and "Eric." The monthly magazines have long ago given us stories of college doings and misdoings *ad nauseam;* and it requires some effort on the part of the much-enduring public to sit down once more to such a familiar feast. Setting aside this natural disinclination, however, it is only fair to Mr Farrar to say that he has produced a very readable book, and has not abused the extraordinary demand which he has made on our patience by a mere reconcoction of old college escapades. College life in his pages is presented to us from the "reading-man's" point of view, and, after recent "muscular" theories, we experience a sensation of relief in finding this to be the case. The scene opens at "Harton" public school, and changes to "St Werner's College, Camford": (why, in the name of common sense, should the author adopt such a transparent disguise for the familiar names of "Harrow" and "Cambridge"?) The interest of the story is meant to centre in the "Harton" boy, Julian Home. But we suspect poor human nature will be more attracted by his less well-behaved and less sententious friend "Edward Kennedy." We must confess that, except in his single outburst of natural feeling on the occasion of his failure for a scholarship, we have little sympathy with Julian, whose moral superiority is rather ostentatious, and the sermonic tone at times of some of whose companions would almost make us set them down as "prigs." We don't think any really sensible young man would try to convert the semi-intoxicated members of a wine-party after the following fashion:—"'What business have you to do the devil's work, and tempt others to sin? You will have a terrible reckoning for it, even if no dangerous consequences ensue,' said Suton sternly. 'C-c-c-cant!' said Fitzurse. 'Yea—what you call cant, Fitzurse. You shall hear some more, and tremble, sir, while you hear it,' replied Suton, turning towards him, and raising his hand with a powerful but natural gesture: 'it is this: 'Woe unto him that giveth his neighbour drink, that putteth thy bottle to him, and makest him drunken also—thou art filled with shame for glory.'" After this, we must say we think hard measure is dealt to an unfortunate young "Camford" student of the name of "Hazlet," who has been brought up at home by a weak mother as the youthful idol of a circle of "pious" females, and whose scriptural eccentricities at college are held up to scorn in the earlier part of the the tale. This character is a complete failure. The vain, pretentious "Bruce," and his "fast" friend "Brogten," are better drawn. The really good-hearted, but affectedly apathetic college "Don," Mr Admer, is also a clever sketch. On the other hand, Mr Carden, the "Harton" master, is dim and unpleasantly sentimental. Throughout the volume, indeed, there is a rather intrusive element of sentimentality, and (as we have already hinted) a not always judicious introduction of the "moralities." Another defect in the story, is the too frequent recourse to supernatural or quasi-supernatural visitations to convert the sinners, and act generally as *Deus-ex-machinâ*. The domestic sketches of the Home and Kennedy families are pleasant, particularly that of Julian's audacious younger brother "Cyril," who contributes a new and very valuable version of one of the best-known hymns of the lamented Dr Watts. The foreign adventure, however, which brings about the engagement of Kennedy and Violet Home is very improbable, not to say absurd, and Miss Home and Miss Kennedy are little more than lay-figures of the well-known lovely and charming young lady type. With all its defects, however, there is a movement and agreeable flow in the tale which will carry most readers through it, and which enables us, conscientiously, to pronounce a not unfavourable judgment on its general merits.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

Once again has the Emperor of the French startled the world by a sudden announcement of what it little expected. Last January he proclaimed war, and was thirsting for the glory of a great captain: this January he is for peace, and is trying to rival Sir Robert Peel. He has turned his sword into a reaping hook, and has passed from the battle-field into the society of political economy. He is no longer pondering over treatises on the art of war, but is deep in the study of M. Guillaumin's most excellent *Journal des Economistes*. A year's subscription to that periodical has he paid from the privy purse, and he is aspiring to the honour of figuring in its pages as a contributor.

The letter by which His Majesty makes known his conversion to, and adoption of, sound principles of political economy, must doubtless be considered one of the most remarkable documents of the day. Not that it is by any means perfect in an economic point of view, for to more than one of its points economists must demur; but because it deals a deadly blow to the odious and absurd system of Customs which has for years prevailed in this country,—oppressing the people, weighing on the public finances, and crippling manufactures, agriculture, and commerce. In putting down this system, the Emperor will do more for France than by winning a hundred battles if he could win them; and he will earn for himself a nobler and more enduring reputation than in these days a mere warrior, or a mere ordinary statesman, can hope for.

The grand points of the letter are, that it proposes the suppression of prohibitions, the abolition of the duties on cotton and wool, and a successive reduction in those on sugar and coffee: its weak points are, that it announces loans from the public purse to agriculturists and manufacturers, and talks of negotiating treaties of commerce,—things which are hardly *à la hauteur* of contemporary economic science;—and another weak point is, that in promising out of the 6,000,000*l* sterling, or thereabouts, which remain from the war loan, to accomplish "not only the prompt termination of railways, canals, navigable ways, roads, and ports, but also the repairs of cathedrals and churches, and, besides, to encourage science, letters, and arts," it promises a great deal more than the money can perform. As to the suppression of prohibitions, such a measure would doubtless be a great thing,—for prohibitions are both monstrous in themselves, and form a sort of citadel for tariff abuses of all kinds. But still the abolition will be more of theoretical than of practical advantage, inasmuch as the prohibition will doubtless be replaced by duties which will be virtually prohibitive. A Government journal talks of duties of 30 per cent. *ad valorem*, but it is to be feared that higher will be imposed, and yet those would be high enough. The reduction in the duties on coffee and sugar is praiseworthy; but perhaps, instead of being "successive," it would have been as well to make it radical at once. The abolition of the duties on wool and cotton is excellent; but how happens it that, though in the former part of his letter the Emperor speaks of "freeing from all duties the raw materials indispensable to manufactures," he, in his summary, mentions only those two articles? Surely coal and iron are as "indispensable" as they! Why, too, does he promise in one part a "gradual diminution of duties on articles of general consumption," and yet in the remaining only proposes a reduction on sugar and coffee?

In spite of its drawbacks, however, we must admit that the letter, if "acted on," will be a great, an immense improvement. But will it be acted on? The dignity of the Emperor, as well as the interests of the country, require that it should be. But the Prohibitionists and Protectionists are unfortunately very powerful. They are numerous, wealthy, and energetic; are banded together in an association, and have large funds at their command; have in their dependence vast numbers of working-men whom they can agitate, and, even if they so please, excite to revolt (and revolt in this country is a serious thing for the Government), by telling them that "French manufactures are to be ruined for the benefit of the English," that "French workmen are to starve that the English may prosper," and other falsities of a like kind. We must not forget that these Prohibitionists and Protectionists have for many years prevented tariff reforms by the pressure they have exercised on, and the menaces they have made against, successive Governments in this country; and that two or three years back they compelled the Emperor himself to postpone to 1861 a measure for the abolition of prohibitions which he had caused to be prepared. From all this, whilst hoping much from the Emperor's letter, we must not be too confident that it will be really executed. Already, indeed, are the Prohibitionist fraternity pestering the Government with deputations and petitions against the projected reform; and already have they succeeded in creating a certain degree of agitation among the working-men at Lille, Roubaix, and other places. On the other hand, it is gratifying to see that in the important towns of Bordeaux and Havre, the prospect of a liberal reform of the tariffs has been received with real enthusiasm, and that in many other places it has caused great pleasure.

In order to form an idea of the importance which the letter, if acted on, would possess, we must refer to the French tariff. And, first of all, we find that the category of the prohibitions which it is proposed altogether to suppress comprises the following articles:—Sheets, muslins, stuffs, flannel, carpets, hosiery, cutlery, arms, most sorts of firearms, several sorts of acids, chicory, percussion caps, playing cards, most sorts of cast iron, some descriptions of copper and copper articles, sailing and steam vessels, articles in tin, quinquina from all places except Peru, forged iron, articles in iron or sheet iron, shakoes, several sorts of cotton threads (the rest pay exorbitant duties), projectiles, essence of madder, piracies of printed books, measures, moneys no longer current, gunpowder, articles in skins or leather, articles in iron, in zinc, and in certain other metals, cotton umbrellas, articles in common metals, or gilt, or plate, or varnished, certain sorts of pottery (the rest at exorbitant duties), most chemical productions, all sorts of soap, certain sorts of salts, sugar from some countries, tobacco and cigars for private use, various cotton fabrics, some silk fabrics, some woollen fabrics, shawls, and some other articles of a like kind, gauze, tulle, empty bottles, vehicles on springs, and several other objects of minor importance.

The duties to be reduced are as follows :—

COFFEE.

	By French vessels. Per 100 kilogs.* f c	By foreign vessels, or by land. Per 100 kilogs.* f c
From French colonies beyond the Cape of Good Hope..	50 0	... ...
Ditto within the Cape	60 0	... ...
From French establishments on West Coast of Africa..	78 0	... ...
From India	78 0	... 105 0
From other places out of Europe	95 0	... 105 0
From entrepots	100 0	... 105 0

SUGAR.

Not refined, of quality equal to what is called 1st type : From French colonies beyond Cape of Good Hope	39 0	... ...
Ditto of America	42 0	... ...
From China, Cochin China, the Philippines, and Siam	45 0	... 65 0
From other countries of India	47 0	... 65 0
From other places out of Europe	50 0	... 65 0
From entrepots	60 0	... 65 0
Of quality superior to 1st type :—From French colonies beyond the Cape	42 0	... ...
Ditto of America	45 0	... ...
From China, Cochin China, the Philippines, and Siam	48 0	... 68 0
From the countries of India	50 0	... 68 0
From other places out of Europe	53 0	... 68 0
From entrepots	63 0	... 68 0
Refined, of French colonies, beyond Cape of Good Hope	46 0	... ...
Ditto of America	49 50	... ...
Other places	Prohibited.	

At to cotton, on which it is proposed to suppress the duties, the duties are :—

From French colonies	Exempt.	
Turkey	15 0	... 25 0
India	15 0	... 25 0
Other countries out of Europe	20 0	... 25 0
Entrepots	25 0	... ...

The duties on wool, which it is also proposed to suppress are :—

Common, not washed, out of Europe	5 0	... 15 0
— — other countries	10 0	... 15 0
Fine, out of Europe	10 0	... 20 0
— other countries	15 0	... 20 0
Common, washed, out of Europe	10 0	... 25 0
— — other countries	20 0	... 25 0
Fine, washed, out of Europe	22 50	... 37 50
— — other countries	32 50	... 37 50
Combed	70 0	... 80 0
Dyed	100 0	... 115 0

Wools imported by the land frontiers pay from 10f to 37f 50c the 100 kilogs.

* 100 kilogrammes are nearly 2 cwts, and there are 25f in the £.

The necessity of extending a reduction of duty to iron and coal, "which are indispensable in manufactures," is evident from the fact that iron pays from 10f to 125f the 100 kilogs when imported by French vessels, and from 11f to 133f 70c when brought in by foreign vessels or by land; whilst coal pays from 15c to 80c the 100 kilogs, according to the frontier by which it is introduced, the highest duty being levied on the coasts nearest England. It must be remarked that the duties specified on sugar, coffee, cotton, wool, iron, and coal are (as, indeed, is the character of all other articles in the French tariff) augmented by what are called *decimes*.

Accounts of the indirect and direct taxes for 1859 have just been published by the Government. The indirect taxes (not including a sum of 5,972,000f remaining due) produced last year 1,094,644,000f (43,785,760*l*), which were only 2,916,000f more than 1858, but were 41,931,000f more than in 1857. Compared with 1858, the items which last year presented the largest decline were registration and mortgage duties, French colonial sugar, and native sugar; and those which presented the largest increase were foreign sugar, potable liquors (wines, &c.), and tobacco.

The following is a detail of the items composing the indirect taxes for the last three years :—

	1857. f	1858. f	1859. f
Registration and mortgage duties	283,735,000	286,347,000	271,311,000
Stamp duties	54,590,000	52,983,000	53,504,000
Customs duties on imports of grain	1,233,000	650,000	1,221,000
Ditto of merchandise	115,217,000	107,113,000	109,810,000
Ditto of French colonial sugar	36,953,000	51,981,000	43,565,000
Ditto of foreign sugar	29,810,000	22,871,000	34,891,000
Customs duties on exports	1,802,000	3,796,000	4,224,000
Navigation duties	4,147,000	3,794,000	4,351,000
Various Customs duties and receipts	2,412,000	3,513,000	2,024,005
Tax on consumption of salt in the Customs districts	29,584,000	27,823,000	28,348,000
Duty on potable liquours (wines &c.)	152,899,000	165,832,000	174,271,000
Tax on the consumption of salt beyond the Customs districts	7,538,000	7,752,000	8,723,000
Duty on manufacture of native sugar	41,577,000	63,871,000	57,585,000
Various duties and receipts	51,849,000	49,962,000	52,635,000
Receipts from the sale of tobacco	173,268,000	177,273,000	178,744,000
Receipts from the sale of gunpowder	11,254,000	10,013,000	9,416,000
Post office	52,004,000	53,036,000	56,498,000
Duty of 2 per cent. on money orders	1,664,000	1,625,000	1,840,000
Places in mails	15,000	...	...
Duty on transit of foreign mails	1,108,000	1,469,000	1,495,000
Various receipts	24,000	24,000	245,000

With regard to the direct taxes the results are these :—The total amount due for the whole of the year 1859 was 472,784,000f, and of it as much as 459,415,000f were paid. This latter sum was 26,060,000f more than Government could legally have exacted, the taxes being only due by monthly instalments, and a month's credit being allowed. In 1858 the amount paid in advance was only 24,210,000f: and whilst in 1858 the law expenses to enforce payment were at the rate of 1f 47c the 1,000f, they were only 1f 35c in 1859.

As the letter of the Emperor gives the assurance that peace will be maintained, it might have been expected to produce a striking rise on the Bourse; but it has not done so, owing to the uneasiness excited by the rupture between the French Emperor and Rome, and by the state of Italy generally. As regards the relations with England, the Bourse was never more satisfied; they are in fact all it could wish. It entertains the belief that even if the Emperor's letter should encounter strong opposition in this country, a commercial convention between England and France will certainly be concluded. The Bourse has yet another ground for satisfaction, and that is that the Emperor, in the hope of encouraging healthy speculation, has consented to the abolition of the charge for admission to the Bourse—a charge which kept hundreds of people away.

The following are the quotations :—

	Thursday, Jan. 12. f c	Thursday, Jan. 19. f c

Touching the Geneva line, it appears that negotiations are in progress for amalgamating it with the Lyons and the Mediterranean.

The Customs returns for last year have appeared to-day, but from press of matter I must reserve them for my next.

Subjoined is an account of the markets:—

FLOUR, at *Paris*, during the past week, has not been very active. Yesterday the quotations were 57f to 58f superior the sack of 159 kilogs (sack included), 55f to 56f good sorts, 52f to 54f inferior. Four marks were 57f for the month, and for February 57f 25c to 57f 50c.

WHEAT.—The market at *Paris* yesterday was calm, with a tendency to decline. Fine qualities were at 31f to 31f 50c, some small lots 32f the sack of 120 kilogs; ordinary sorts, 29f to 30f; some few lots at 30f 50c. The War Department yesterday accepted contracts for the supply of 10,000 quintals at prices varying from 25f 95c to 26f 49c the 100 kilogs. Of the provincial markets, 41 have risen from 5c to 1f 45c the hectolitre, 19 have fallen from 11c to 75c, and 60 have remain unchanged.

COTTON.—The sales of the week, ending Friday, at *Havre*, were 6,513 bales, and the importations 22,740. Prices declined, and the brokers fixed the closing quotations of low New Orleans at 101f the 50 kilogs, and of very ordinary ditto at 106f. This week the market has been calm, and yesterday low New Orleans was at 101f.

COFFEE.—At *Havre*, in the week ending Friday, the demand was so active that the sales exceeded 15,600 sacks. Hayti was at 73f to 73f 50c the 50 kilogs in bond; Gonaives, 76f to 76f 50c; Maracaibo, 75f; Rio, not washed, 72f to 78f 50c; ditto, washed, 80f to 84f 50c; Santos, at different prices; Ceylon, native, 123f to 127f, duty paid; Manilla, 129f. The arrivals of the week were only about 400 sacks. This week some very important transactions have taken place in anticipation of the reduction of duty proposed in the Emperor's letter. Hayti has been at 74f to 74f 50c; Rio, not washed, 72f 50c to 73f 50c; Manilla, 130f, duty paid; Ceylon, 124f to 124f 50c, duty paid; ditto, triage, 127f to 128f, duty paid. At *Bordeaux*, last week, only some small lots of Guayra were sold at 1f 60c to 1f 70c the kilog; and some Santiago at 1f 60c to 1f 80c. At *Nantes*, last week, 2,700 sacks Hayti and 2,250 Java were sold, but the prices are not stated: some damaged Java and Manilla were also sold. At *Marseilles*, last week, 1,326 sacks Rio went at 72f 50c to 74f; 500 Rio, washed, 85f; 180 Rio, not washed (superior), 80f.

SUGAR.—The sales at *Havre*, for the week ending Friday, were:—760 casks French West India at 59f 50c to 60f the 50 kilogs, duty paid, 10,000 sacks Mauritius at 65f 50c to 66f, duty paid; and a small quantity of Havana at 37f, in bond. The arrivals were upwards of 600 casks Martinique, and nearly 4,000 sacks of other sorts. Notwithstanding the projected diminution in the duty, there has not been much activity this week. French West India has been at 59f 50c to 59f 75c, duty paid. At *Bordeaux*, last week, about 13,000 bales Reunion went at from 59f 50c to 62f the 50 kilogs; and upwards of 10,000 bales Mauritius at 63f and 64f; French West India was at 59f. At *Nantes*, last week, only some small lots of Reunion were sold at prices varying from 50f (commoo) to 68f 50c. At *Marseilles*, last week, about 2,000 bales Reunion were sold at 62f to 66f.

INDIGO.—At *Havre*, in the week ending Friday, about 60 cases Bengal were sold, part at 10f 50c to 11f the half-kilogramme duty paid; the rest at prices kept secret. There were no arrivals. This week 14 cases Bengal have been sold at 45c above the estimates, and 10 others at 11f the half-kilog. At *Bordeaux*, last week, 128 cases Bengal, Madras, and Kurpah were sold, but prices are not stated.

HIDES.—At *Havre*, in the week ending Friday, the sales were—6,000 dry La Plata at 147fr 50c to 162f 50c the 50 kilogs, duty paid; 500 ditto, salted, 81f; 2,000 Monte Video, dry, 152f 50c; 1,000 Pernambuco, salted, 73f 50c; 3,400 ditto, drysalted, 105f; 2,900 New York, salted, 61f to 62f; 387 Arica, dry, 127f 50c; 400 Irish, 57f 50c. In addition, at a public auction, 2,229 Arica, salted, went at 70f to 81f 50c; 1,208 Arica, dry and drysalted, 90f to 133f 50c; 100 Monte Video, salted, 2f; and 50 Iceland, salted, 57f 50c. A number of these and of other

sorts were also offered, but found no bidders. The arrivals of the week were not important. This week the sales have not been numerous. Buenos Ayres, dry, have been at 150f, duty psid; Rio Grande, salted, 82f 50c; Buenos Ayres, salted, 75f 50c, duty paid.

WOOL.—At *Havre*, in the week ending Friday, 190 bales La Plata unwashed, went at 1f 35c to 2f 45c the kilog; 27 ditto, washed, 1f 35c to 3f 45c; 10 Chili, unwashed, 1f 55c; 28 bales sheep skins, La Plata, unwashed and washed, 50c to 1f 52½c. The importations were insignificant. In the course of the year 1859 the total importations at Havre were 48,570 bales, and the total sales 17,830; in 1858 the imports were 39,600 bales, and the sales 16,920; in 1857 the former were 36,600, the latter 8,930. This week a fair amount of business has been done. Buenos Ayres, unwashed, at 1f 10c to 1f 60c per kilog in bond; and sheep skins, La Plata, unwashed, 95c to 1f 50c; Monte Video, washed, 1f 15c to 1f 47½c.

TALLOW.—No sales were made at *Havre* last week, and great part of the small stock of native on hand was exported to England. Nothing has been done this week. At *Paris*, yesterday, the 100 kilogs were 133f 50c within the walls, and 126f 26c outside—a slight rise on last week's quotations.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. was 87f the hectolitre; Montpellier of 86 deg., 130f. At *Bordeaux*, the day before yesterday, 3 6 Languedoc was 130f; beetroot, first quality, 95f.

BRUSSELS, Jan. 18.

The Government was authorised by law of 18th September last to raise a loan of 45,000,000f (1,800,000*l*); and it now announces in its official journal that it will receive public subscriptions for 30,000,000f of it, on and after Saturday next. The loan is to bear 4½ per cent. interest, and subscriptions can be made in sums of 2,000f, 1,000f, 500f, 200f, and 100f. The subscriptions may be paid in eight instalments, but discount will be allowed if they be paid at once. As to the 15,000,000f remaining, the official journal announces that they have been taken by Messrs Rothschild, the National Bank, the Bank of Belgium, and the Société Générale, at, of course, the same rate of interest.

Correspondence.

THE PENNY PAPERS AND THE DIVORCE COURT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is a passage in an article in the ECONOMIST this day which I think you will admit requires a little explanation. It relates to the Divorce Court, and is towards the end of the article. It commences at the words, "the application of the remedy," and finishes at the words, "the necessary protection of domestic purity accomplished." The sentence, "Let the cheap newspapers which are the great sinners in this respect," &c., seems to imply that *all* the cheap newspapers are guilty of publishing at length details "which the *Times* and *Daily News* compress into a few scarcely objectionable lines." In proof that this is not true, at least as regards the *Star*, I enclose part of an article which appeared in the *Star*, in reply to similar charges brought in general terms against the cheap press by the *Saturday Review*. I am inclined to think that this proof is not necessary, as, from the wording of a subsequent paragraph, commencing "if *those* among the penny papers," in the ECONOMIST, it seems as if the writer did not intend to make the charge general.

It is possible that the error is a typographical one; but in any case I am sure the writer would not intend to include in such a charge any paper which he knows has not laid itself open to it.—I am, yours obediently,

A READER OF THE "STAR."

[We have not room for the extract sent us by our correspondent, but are quite satisfied of the truth of his statement with regard to the *Star*; and we believe there are other penny papers, as, for example, the *Standard*, to which the same remark applies.—ED. ECON]

PROTECTIVE DUTIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your paper of the 14th instant—article, "The Commercial Negotiation with France," you say:—"*We* have no longer any protective duties to relinquish," &c. &c.

Now, Sir, with great respect, we have a protective duty on foreign hops, which should be relinquished. The duty is 2*l* 5s per cwt. The duty on English hops is about 18s 6d per cwt,—*ergo*, there is a protective duty of 1*l* 6s 6d per cwt.—Respectfully yours,

Dublin, Jan. 16, 1860. A CONSTANT READER.

COMMERCIAL AND MISCELLANEOUS NEWS.

The Right Hon. the Lords of the Committee of Privy Council have received, from the Secretary of State for Foreign Affairs, a copy of a French Imperial decree, regulating as follows the admission or exportation of certain foreign merchandise at the undermentioned custom houses:—Art. 1. The custom houses of Thionville (railway station) and of Apach (Moselle) are opened for the importation, 1st, of goods paying duty at the rate of more than 20 francs per 100 kilos, or designated by name in the 8th article of the law of the 27th March, 1817; 2nd, of large undressed skins, dry and of European origin, at the rate of 5 francs per 100 kilos; 3rd, of wool in mass; 4th, hemp and flax yarn; 5th, machines and mechanical apparatus. The custom house at Thionville (station) is also opened for the importation and exportation of grain and meal, and to the importation and transit of books in the French language. The custom house of Apach is open for the importation and transit of books in foreign and dead languages. From the 31st December last the custom house of Evrange (Moselle) is closed against the importation of merchandise paying a duty of more than 20 francs per 100 kilos, or specially designated by Art. 8 of the law of the 27th March, 1817, and for operations of transit. The custom house at Sierck is closed from the same date against the importation of machinery and mechanical apparatus, the importation of flax or hemp yarns, and the admission of books in foreign or dead languages. From the same period the privilege of importing by the custom house of Sierck, 1st, merchandise paying more than 20 francs per 100 kilos, or specially named by the law of the 27th March, 1817; 2nd, wool in mass; 3rd, raw hides, dry and of European origin, at the rate of 5 francs per 100 kilos; and 4th, the privilege of transit through the same custom house of goods, whether prohibited or not, will be limited to operations effected by the Moselle.

The Right Honourable the Lords of the Committee of Privy Council for Trade and Plantations have received, from the Secretary of State for Foreign Affairs, a copy of a French Imperial decree, fixing as follows the duties upon hemp and whalebone:—

	Per 100 kilos.
	f

Dated the 19th January, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,912,487	Securities	30,329,486
Public Deposits	5,166,259	Coin and Bullion	15,884,498
Private Deposits	14,850,754		
	42,929,500		46,213,984

The balance of Assets above Liabilities being 3,284,484*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An increase of Circulation of	£268,728
A decrease of Public Deposits of	398,666
A decrease of Other Deposits of	692,715
A decrease of Government Securities of	150,000
A decrease of Other Securities of	299,266
A decrease of Bullion of	339,631
An increase of Rest of	33,756
A decrease of Reserve of	561,451

Although the "other" securities have decreased, there have been some heavy draughts upon the deposits, and the reserve has diminished more than half a million. The decrease in the bullion is 339,631*l*. These alterations account for the advance in the Bank's terms

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,513,864	£ 20,316,129	£ 20,911,410	£ 21,857,551	£ 22,912,487

Exchange on Paris (shrt)	25 37½ 42½	25 20 25	25 15 22½	25 7½ 12½	25 5 10
— Amsterdam ditto	12	11 13½ 14	11 14 15	11 15	11 12½ 13
— Hamburg (3months)	13 11	13 6	13 5½	13 6½ 6½	13 4½ 5

At the corresponding period of the year 1850, the Pope had just received the congratulations of the Spanish and other ministers upon his virtual restoration through the combined efforts of the Catholic Powers. Rumours of an impending *coup d' état* by the President were still circulating in Paris, although his Highness' tenure of office, according to the constitution, was not to terminate until May, 1852. A Russian 4½ per cent. loan for 5,500,000*l* had been announced through Messrs Baring. The price was 93, but was reduced, by various allowances, to a fraction over 89. The ostensible object of the loan was to provide for the completion of the St Petersburg and Moscow Railway; but Mr Cobden, at a meeting of the Peace Society at the London Tavern, was reprobating all participation in the transaction, as tending to countenance the Russian deeds of violence and blood in Hungary. The resources of the Bank of England were very large, the rate of money very low, and the funds 1¼ per cent. higher than now.

In 1857, public opinion was divided with reference to the question of the wars in Persia and China. The money market was tight, being still acted upon by the financial condition of France. The rate of discount of the Bank of France was the same as that of the Bank of England,—6 per cent.,—but the former establishment refused bills having more than 75 days to run. The prospectus of the Nassau Railway had been issued.

In 1858, Orsini and his confederates had made their atrocious attempt upon the life of the Emperor of the French. An unfavourable impression had been produced by the prospect of fresh measures of repression in France, and of the reopening of the foreign refugee question. At Hamburgh the rate of discount was only 2 per cent. Here, the disturbance in the money market was subsiding rapidly, but the Bank of England had not yet reduced their minimum below 5 per cent., although the bullion had again increased more than a million, and the reserve three-quarters of a million, within the last week. The prospectus of the Bahia Railway had made its appearance, through Messrs Rothschild.

In 1859, considerable sensation had been excited by the announcement of the approaching marriage of Prince Napoleon with the Princess Clotilde of Savoy. The stock markets throughout Europe were sensitive and agitated, and each utterance of the semi-official press in Paris was most anxiously scanned. An immense deal of gambling was going on in Lombardo-Venetian Railway shares between Paris, London, and Vienna.

The amounts of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,222,654*l*; in 1857, a deficiency of 5,510,270*l*; in 1858, a deficiency of 3,863,961*l*; and in 1859, a deficiency of 1,559,174*l*. In 1860, the deficiency is 4,742,910*l*.

The anticipation of an early but moderate advance in the value of money has already been realised. Yesterday, the Bank of England raised their *minimum* rate of discount from 2½ per cent., at which it was fixed on the 14th July last, to 3. It is not often that an alteration at the Bank is received so quietly as upon the present occasion. The gradual reduction in the Bank's resources has been obvious for some time past; and the drain of gold, though still very moderate, has become more marked during the last two or three weeks. At a time when the Continental demand for gold has become unusually active, there has been a decided falling off in the supplies. The New York exchange has descended to a point which precludes, for the time, specie remittances of importance; and no gold is yet due from Australia. The stock in the Bank consequently presents the only available resource. The question—will the value of money rise further?—now attracts much discussion: it hinges mainly upon the bullion movement. Glancing at the nature of the interchanges now going on between this country and the Continent, we see no feature justifying an apprehension of a real balance against England—a balance only to be redressed by sending away specie—with the single exception of the withdrawals of silver from the Continent. But the magnitude of the trade in this one commodity is sufficient to derange all the other calculations. Why is the demand for silver so brisk? Simply, as it seems to us, because, apart from what we will call the ordinary flow of the metal to India, a great stimulus has suddenly been given to the adverse current by the extensive purchases of the Indian Government native paper on English account. A couple of years ago, there was scarcely any market here for the Indian rupee paper, and almost the only persons in England who held it were retired servants of the East India Company. Now, transactions to an enormous amount take place every week, several millions sterling having come over during the last few months. English capitalists have recognised the solidity of the security, and purchased it upon low terms from discouraged native holders. When a million of native paper is sent here for sale, or is purchased on English account in the Indian market, the effect upon our money market is precisely the same as if a loan to that amount had been raised here, and the proceeds sent out in silver. Little doubt can be entertained that a further considerable amount of the rupee loans will yet gradually find its way hither, for the demand in this market is very active. But it is probable that the influx will at least slacken, since the native capitalists will soon raise the price in proportion to the eagerness of the demand from home. The Indian markets are already to a great extent relieved from the mass of Government securities

lately afloat there, and principally derived from the Government loans kept constantly open. It results from these considerations that, although there is nothing to warrant apprehensions of any real disturbance in the money market, the bullion drain deserves close attention.

The demand for money in commercial channels throughout the week has been only moderate. To-day, however, it was noticed that the applications to the Bank, at the advanced charge, were more numerous than at an earlier period of the week, when the rate was only 2½ per cent. The principal moneyed establishments to-day were indisposed to do business below the Bank minimum.

The joint stock banks have raised their rates for deposits from 1½ to 2 per cent. The London and Westminster Bank, however, give only 1 per cent. for sums below 500*l*. The discount houses and discount companies have also notified an advance of ½ per cent. in their rates for loans, which are now fixed as follows, viz., 2 per cent. "at call," and 2½ per cent., subject to seven days' notice of withdrawal.

Since the date of the return given above, 94,000*l* in gold is known to have been taken from the Bank, for exportation, viz., 79,000*l* yesterday, and 15,000*l* this day.

The imports of specie and bullion since the date of our last report, exclusive of the silver received from the Continent, have been limited to about 170,000*l*, being again very inadequate to the demand.

Four gold ships are known to be on the way from Melbourne to England, viz.:—The Water Nymph (out 78 days), with 136,000*l*; the Sussex (out 77 days), with 71,000*l*; the Donald McKay (out 72 days), with 148,000*l*; and the Commodore Perry (out 65 days), with 58,000*l*.

The following are the particulars of the 547,609*l* in specie and bullion shipped on board the steamer China, which leaves Southampton this day:—For Calcutta, silver, 243,595*l*, and gold, 85,000*l*; Shanghai, silver, 93,381*l*; Hong Kong, silver, 64,270*l*, and gold, 10,000*l*; Madras, silver, 19,500*l*, and gold, 8,473*l*; Penang, silver, 8,650*l*; Alexandria, gold, 7,500*l*; Ceylon, gold, 1,700*l*; and for Foo-choo-foo, silver, 540*l*.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—The demand for gold is still very active, and, in the absence of arrivals, several sums have been taken from the Bank, amounting since the date of our last (12th instant) to 295,000*l*. A considerable portion of this has been taken for India and China, no less than 105,173*l* in bars and coin having been shipped by the steamer to sail on the 20th inst. There have not been any arrivals from Australia during the week. In addition to the vessels mentioned in our last as having sailed, the Roxburgh Castle is known to have gold on board; the precise quantity, however, has yet to be ascertained.

Silver.—The price of bar silver, which we last quoted as 62½d per ounce, has increased to 62¼d, and the demand is still active. A large amount has been shipped by the steamer sailing on the 20 inst., and the Bombay mail of the 27th inst. is expected to take a considerable sum. Some large arrivals have been reported from the Continent; the Sultan has brought 13,135*l* from the Peninsula, and the Atrato has arrived to-day, bringing about 490,000 dols in specie; the proportion of bar silver in this amount, however, cannot yet be ascertained. The La Plata has taken 5,640*l* to the West Indies.

Mexican dollars have been in demand at an increased rate; we quoted in our last 62½d per oz, and the price has risen to 62¾d per oz for the mail leaving 20th inst. The Government have bought about 32,000*l*, which goes to China by this steamer. The market is to-day a little more quiet, and a slight decline in price may be expected for the present. There have been some arrivals of dollars from the Continent, and about 150,000 dols from America.

Exchange has taken a sudden movement upwards, this day and yesterday, owing to the rise in the price of silver. We quote Bank paper on Bombay and Calcutta, 2s 0½d, 60 days' sight; and on Madras, nominal, without quotation; documented bills, 1s 11⅞d to 2d.

India Government Loan Notes are again in increased favour at a further rise in price. The operations in these securities, the last few days, have been to an unprecedented extent. Five per Cents. are scarce, and have been done this day at 98⅝ to 99 (1s 11⅜d to ⅝d), and 5½ per Cents., 104⅝ to ¾ (2s 1⅛d to 3-16d).

Quotations for Bullion.—Gold—Bar gold, 77s 9½d per oz std; bar gold, fine, 78s per oz std; bar gold refinable, 78s 1d per oz std, last price; South American doubloons, 75s per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2¼d per oz std; bar silver, containing 5 grs gold, 5s 2½d per oz std; fine cake silver, 5s 6⅜d to 5s 6½d per oz; Mexican dollars, 5s 2¼d per oz, last price; Spanish dollars (Carolus), 6s to 6s 3d per oz, last price; five-franc pieces, 5s 0⅜d per oz.

The Continental exchanges retain an unfavourable tendency. A decline has taken place this week in the rates on Holland and Paris. Short bills on the latter city are now quoted as low as 25.5 to 10. This afternoon there was no alteration of importance. The exchange on Vienna, however, which last Friday was quoted 12.90 to 13, has risen to 13.35 to 13.45—a difference of nearly 4 per cent. Both in a political and financial sense, there is an utter want of confidence in the Austrian *régime*. The unexplained over-issue of the National Loan is still operating to the detriment of the State in the minds of its creditors, whose name is legion.

The closing quotation of the Indian Five per Cent. rupee paper this afternoon was 98⅝ to ⅞, and of the Five-and-a-Half per Cent., 104⅝ to ⅞, showing in the former instance a rise of 1¾ per cent., and in the latter a rise of 1 per cent., compared with last Friday's prices. The transactions have been more active than ever.

The new Canadian Five per Cent. Loan of 2,800,000*l*, which was allotted on Friday last, has been in great favour with investors. The price rose at one period to 3½ to 3¾ prem. The closing quotations this afternoon was 3 to 3¼ prem., being ½ per cent. higher than on last Friday. The first payment of 10 per cent. was made on Monday, when the allowance of 5 per cent. discount induced many subscribers to pay up in advance. The next instalment, amounting to 8 per cent., is payable the 1st February.

On Wednesday next the final instalment of 13 per cent. falls due on the Russian Loan, but the bulk of the amount has been liquidated in advance.

The prices for the shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 2¼ prem., "buyers;" Universal Marine Insurance, ¼ to ⅜ prem.; San Paulo (Brazilian) Railway, ¼ to 3-16 dis.; Bank of Turkey, ⅛ dis. to par.; Rio de Janeiro Drainage, ⅛ to 3-16 prem.; and City of London Brewery Preference shares, par to ⅛ prem.

At Paris to-day (Friday) the closing quotations of the Bourse were as follows:—3 per Cent. Rentes, for money, 68.90; ditto, for account, 69; ditto 4½ per Cents., for money, 97.25; Bank of France shares, 2,825. The 3 per Cents. present an improvement of ⅛ to ¼ per cent. compared with the closing quotations of yesterday, and scarcely any variation compared with those of last Friday.

In consequence of the Emperor Napoleon's free trade manifesto, the English funds were firmer until the advance in the rate of discount on Thursday, when a decline set in. The *bonâ fide* demand having become slack, the market has been subjected to adverse speculative influences. The closing quotations of Consols this afternoon were the lowest of the week, and ¼ per cent. below those of last Friday. The feeling of uncertainty with regard to the prospects of the money market weighs upon prices. Subjoined is our usual list of the highest and lowest price of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks also showed increased firmness during part of the week, but has given way since the rise in the Bank rate of discount. Some of the speculators for a rise have evinced a disposition to close their accounts, and a number of operations for the fall have also been encouraged. Compared with the final quotations of last Friday, there is a decline of 1½ per cent. in Great

Western stock, 1 per cent. in London and South-Western, ½ per cent. in Midland and Lancashire and Yorkshire, and ¼ per cent. in Caledonian, South-Eastern, North British, and London and North-Western, but an improvement of ½ per cent. in Eastern Counties and Great Northern. The traffic still compares very favourably with that for the corresponding period of 1859; and the impression with regard to the forthcoming dividends continues hopeful. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

The half-yearly dividend on the stock of the Brighton Railway Company has been officially announced at the rate of 7 per cent. per annum, against the same rate for the corresponding six months of 1858.

The Union Bank of Australia, at the general meeting on Monday, declared a dividend of 8 per cent. for the half-year; the Commercial Bank of London, on Tuesday, a dividend of 3½ per cent. for the half-year; the City Bank, on Tuesday, a dividend of 3 per cent. for the half-year; the London and Westminster Bank, on Wednesday, a dividend and bonus of 10 per cent. for the half-year; the London Joint Stock Bank, on Thursday, a dividend and bonus of 11¼ per cent. for the half-year; and the Bank of London, on Thursday, a dividend of 2½ per cent. for the half-year. These rates of distribution are regarded with satisfaction by the shareholders.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.07½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3⅜ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is about 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

The Commercial Times.

MAILS TO AND FROM JERSEY AND GUERNSEY.—The auxiliary mails to and from Jersey and Guernsey, by way of Weymouth, have ceased; and the mails forwarded via Southampton have been increased to four each week. The mails will be dispatched from London on the evenings of Monday, Tuesday, Thursday, and Friday; and will be received in London on the mornings of Monday, Tuesday, Thursday, and Friday.

NEWSPAPERS FOR TUSCANY.—In order to ensure the transmission of newspapers for Tuscany by the quickest route, that is, *via* Sardinia, they must be paid on being posted in this country, according to the following scale:—For a packet not exceeding 4 ounces, 4d; above 4 ounces, and not exceeding half-a-pound, 8d; with an additional charge of 8d for every half-pound. If the above rates are paid, the newspapers are not only forwarded by the quickest route, but they are exempt from further charge of any kind on delivery. Newspapers for Tuscany, are, however, frequently posted without sufficient postage having been paid upon them for transmission by this route; for example, with a payment of 1d only for a packet of 4 ounces; and, in such case, they can be sent only in the mail to France for conveyance thence to Leghorn by the French packet which leaves Marseilles once a week. Such newspapers are, consequently, often much longer in reaching their destination; besides which, the postage paid being merely the French transit rate, they are subject to an additional charge on delivery. As complaint has lately been made of delay in the transmission of newspapers to Tuscany, it is thought necessary to call the attention of the public to the above circumstances.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The quantity of English wheat on show at Mark lane, to-day, was limited, and mostly in very poor condition. Fine dry samples sold readily at fully Monday's currency, but other qualities were difficult to quit. Foreign wheat was dull, and almost nominal in price. There was very little passing either in barley or malt; but oats were quite as dear as last week. Beans, peas, and flour maintained their previous value. The imports from abroad have been confined to 610 quarters of wheat; 1,430 barley; 10,590 oats; and 4,210 sacks of flour.

At Liverpool, this morning, produce generally was in fair request, at full prices.

The Liverpool cotton market has been very animated throughout the week, and the total sales have amounted to 104,000 bales, including 70,000 bales to spinners, 14,000 bales on speculation, and 20,000 bales for export; but the imports continue on too heavy a scale to allow of much improvement in prices—for, notwithstanding this large business, the general advance of the week hardly amounts to ⅛d per lb. The quantity of inferior cottons on sale remains very large indeed. The market to-day closes brisk. Sales, 10,000 bales at former rates. In the London market a good business has been done this week: sales, 1,640 bales at about former rates.

Advices from Alexandria to the 3rd inst., state that the cotton market was very firm, at extreme rates, owing to the limited supplies on offer.

From a telegram received from China, we learn that the shipments of tea to Great Britain had reached 43,000,000lbs; nevertheless, the demand for that article by private contract has continued steady. The supplies offered at public sale have gone off somewhat heavily, on former terms.

Compared with last week, there has been less activity in the demand for nearly all raw sugars. However, prices generally have been well supported, and importers have continued firm. Refined sugars have ruled about stationary, with only a moderate supply on offer.

We have no change to notice in the value of any kind of coffee. The demand has been almost wholly confined to immediate wants. Good native Ceylon has changed hands at 60s per cwt.

There has been about an average inquiry for most descriptions of rice, at late quotations. The quantities offered at public sale have not increased.

For the time of year, the fruit market has been in a healthy state, at about previous currencies. The auctions have been fairly attended by buyers.

Good and fine qualities of saltpetre have moved off steadily, other kinds slowly, at quotations equal to the previous week.

Rum has maintained late currencies; but the inquiry for it has not increased. The brandy market has continued in an uncertain state; and grain spirit, both English and foreign, has commanded very little attention.

Most kinds of hemp have sold to a fair extent, at very full prices—Petersburgh clean having realised 28*l* 5s to 28*l* 10s per ton. In flax, however, very little has been passing. Jute and coir goods are steady.

Public sales of wool are announced at Liverpool. In the London market, the wool trade has ruled steady, though far from active, at full prices.

In the early part of the week there was some excitement in the market for Scotch pig iron; but it has since subsided, and sales have been made at 57s 3d cash. Other metals have maintained their previous value.

Linseed oil has moved off steadily, at 27*l* 15s per ton, but other oils have met a dull inquiry. American turpentine has advanced to 36s per cwt.

There has been a moderate inquiry for tallow, the stock of

which is rather extensive, at prices equal to 58s 3d and 58s 6d for P.Y.C., on the spot.

"The buoyancy in the market for domestic cotton goods," observes the New York *Shipping List*, "continues to be a marked feature, and the indications are very favourable for both jobbing and commission houses. The manufacturing interest is progressing also; and, taking it altogether, the prospect for the dry goods trade during the winter months is unusually flattering. With isolated exceptions, manufacturers are busily employed on large spring orders, for the most part at market values, but in part at stipulated rates. With continued heavy importations, the market for foreign goods is dull, and somewhat irregular, though without having led to any material reduction in prices. A considerable quantity of recent arrivals have been placed at fairly remunerative prices, however, but the bulk has been sent to store, and the stocks are augmenting."

IMPORTS OF FOREIGN AND COLONIAL WOOL.

COLONIAL and FOREIGN WOOL imported into London, Liverpool, and Hull, from Jan. 1 to Dec. 31, 1858 and 1859, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

The cotton market in the early part of the past week was in a very unsettled state, with very irregular and declining prices. Some holders continued to press sales, and a further decline was in many cases submitted to. A decided change in tone took place, however, about the middle of the week, the low prices attracting the attention of buyers. A large business has been done by the trade in the last three days, and a smart reaction in prices has been the result. Our quotations for middling American are ⅛d per lb above those of last week, and the lower qualities are much more saleable. Egyptian maintain their ground well in the better grades. Brazil are steady. East India have been bought freely by exporters and the trade at full prices. The sales to-day are 10,000 bales. There is little animation, though a good demand. The reported export amounts to 19,620 bales, consisting of 10,590 American, 580 Brazil, and 8,450 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The declaration of the Emperor of France in favour of free trade, and the somewhat firm advices from Calcutta, have imparted some activity to the demand for goods in most of the manufacturing markets held this week. Prices have steadily advanced, and the operations have been comparatively large. Large orders are still on hand—there is no accumulation of stock—and most of the mills are running full time. Iron has been somewhat excited, at enhanced rates, and a steady business has been passing in the coal trade.

MANCHESTER, Jan. 19.—On Monday morning, simultaneously with better accounts from Calcutta to 30th ult., this market commenced with quite an extraordinary sweep of transactions. Shirtings, in which most of the transactions occurred, attained at once 1½d per piece on the closing prices of last week, since which another 1½d per piece, if not more, has been added generally on sellers' lists. From Monday the business became less confined to prominent articles, and the sales daily of almost all sorts of goods and yarns have been extremely large. Wherever length of contracts or height of prices have not been, it might be said, wholly against buying, the demand as yet has appeared undiminished, though some weeks past had been slowly lending a current of improvement. We advance our quotations throughout.

LEEDS.—There is just now a great scarcity of seasonable goods, and the consequence is that prices rule rather stiffer than for some time past. Clothiers in some of the districts are so tied down by their engagements that they are working their mills almost day and night.——ROCHDALE.—Manufacturers are full of orders, and able readily to secure part of the advance asked for at the beginning of the month. 2s per piece on the prices of last month is still asked, but this is resisted, 1s being offered and generally taken. Orders from Canada are beginning to flow in. ——HALIFAX.—Upon the whole, trade is rather quiet here in most branches. Little wool has changed hands, the kinds in demand being those for blankets, flannels, army cloths, &c. Still prices remain firm, with a hardening tendency rather than otherwise. In yarns and pieces trade is much the same; not many orders are stirring. Machinery is running full time, but it is for old contracts.——BRADFORD.—Wool—There is greater anxiety manifested to realise by holders, but without some concession in price weighty sales cannot be effected. Noils and shorts admit of no variation worthy of remark. Yarns—There is a dulness coming over the spinning trade. Pieces—There is no animation, except for fancy goods, which are not to be found in stock, and most be ordered by those who require them.——LEICESTER.—There has been a good business doing in most descriptions of hosiery, and the trade generally is in a satisfactory state. Yarns are commanding good prices, spinners being actively engaged. The wool market is buoyant.——NOTTINGHAM.—There is a slight revival in some branches of the lace trade, and more has been doing this week than for some time past. In hosiery there is a fair amount of business doing. There are orders on hand, and buyers are purchasing liberally. Yarns remain firm, and prices remain without change.——DUNDEE.—Some activity has prevailed in our market generally, and prices have had an upward tendency.——BELFAST.—The trade generally has been rather slack; nevertheless, very little change has taken place in prices.——WOLVERHAMPTON.—There has been considerable excitement in the demand for iron, and prices have fluctuated to some extent. The advance, however, has not been freely supported.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Jan. 4.—FLOUR AND MEAL.—The market for State and Western flour has been buoyant, under a moderately active inquiry for speculation, together with a fair demand from the local and Eastern trade. Prices are 5c to 10c higher, and this fact has tended to check operations. Canada flour is in steady fair demand at full rates; the sales are 780 bbls. Southern flour is in steady fair request at full prices; the sales comprise 3,000 bbls, of which 1,500 sold yesterday, closing steadily at 5.65 dols to 6.50 dols for Georgetown, and 5.50 dols to 6.25 dols for Baltimore, Howard street—other kinds unchanged.

GRAIN.—The demand for wheat has been fair for consumption and speculation, but operations have been restricted by the extreme firmness manifested by holders. The sales have consequently been unusually light, and we only note 3,800 bushels red Southern at 1.30 dol, and 3,600 do. white Canada, on Saturday, at 1.41 dol. Corn is scarce and in good request at advanced rates.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Most of the leading markets held since we last wrote have been but moderately supplied with wheat, in, for the most part, very middling condition. For good and fine samples, from their scarcity, there has been a steady demand at extreme rates to, in some instances, a slight advance; but low and damp qualities have moved off slowly on former terms. The dealings in foreign wheat have been somewhat restricted; nevertheless, importers generally have continued firm in their demands. The barley trade has been less active, and prices have shown a drooping tendency. In malt, the transactions have been somewhat limited Oats, beans, peas, and flour have commanded previous rates.

Messrs Horne and Watney have issued their usual most valuable annual circular, from which we extract the following interesting particulars:—Through the assistance of our public docks and private granary-keepers, we have again been able to arrive at a pretty correct estimate of the foreign grain and flour lying in first hands at this port. We therefore compare them with those of the previous year, viz.:—

	1858.		1859.
Wheat	230,000	.....	308,162
Barley	60,000	.....	19,726
Oats	320,000	.....	238,507
Rye	11,000	.....	1,199
Maize	23,000	.....	5,508
Beans	16,000	.....	4,152
Peas	7,400	.....	2,732
Total	680,000	.....	588,987

The balance consisted of millet, dari, lentils, and tares, Of foreign flour the stocks were:—

	Barrels.		Sacks.
1858	21,000	.....	12,000
1859	19,821	.....	23,394

SUPPLIES of WHEAT, BARLEY, and OATS to LONDON, in the undermentioned years, of which supplies the centesimal proportions were:—

	qrs.	English.	Scotch.	Irish.	Foreign.
WHEAT.					
1855	952,686	40·59	00·39	...	59·02 = 100
1856	1,281,357	30·15	00·03	00·05	69·77 = 100
1857	955,086	31·44	2·62	...	65·94 = 100
1858	937,516	29·46	0·39	...	70·15 = 100
1859	1,030,715	33·04	0·14	...	66·82 = 100
BARLEY.					
1855	374,079	65·67	1·88	0·15	32·30 = 100
1856	414,420	45·61	1·81	1·22	51·36 = 100
1857	702,644	14·86	1·64	0.06	83·43 = 100
1858	713,263	12·83	2·22	0·43	84·51 = 100
1859	677,804	15·28	8·46	0·20	76·06 = 100
OATS.					
1855	1,449,690	8·74	2·86	22·86	65·54 = 100
1856	1,409,785	6·84	1·54	20·93	70·69 = 100
1857	1,690,081	2·62	1·72	9·16	86·50 = 100
1858	2,027,601	2·01	3·68	6·09	88·22 = 100
1859	1,777,937	3·21	4·85	7·00	84·94 = 100

Throughout the Continent, wheat has sold at full quotations; but the business done in it for export purposes has been very moderate. Spring corn, however, has sold steadily. In the United States, both wheat and flour, owing to an improved demand on English account, have commanded rather more money.

In Scotland, wheat and, indeed, most other kinds of produce, have realised full currencies; but, in Ireland, the trade generally has continued in a very inactive state.

Nearly the whole of the supply of English wheat on offer in to-day's market was in very poor condition. Fine dry samples moved off steadily at full prices; but other kinds were very dull. The value of foreign wheat was almost nominal. Barley and malt moved off slowly. Oats were very firm. In the value of other produce, no change took place.

Mr Ed. Rainford states that only 4 vessels have arrived off coast since the 12th inst. laden with grain, and that the transactions in floating cargoes have been limited in the extreme.

The London averages announced this day were:—

	qrs	s	d
Wheat	3564 at	45	7
Barley	3059	38	7
Oats	1859	21	8

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING

SUGAR.—The market, although exceedingly firm, has not been quite so active as of late; still the continued moderate arrivals and the increased deliveries for consumption tend to promote general firmness on the part

of importers. Strong refining sorts are in many instances held for further enhanced rates. Only 600 hhds West India sold to yesterday (Thursday). 408 casks Barbadoes partly found buyers at the former value, from 37s to 44s. 47 casks crystalised Demerara, 42s 6d to 45s 6d. The week's deliveries amounted to 4,355 tons, against 3,700 tons last year; and the stock is 54,430 tons, against 53,000 tons in 1858.

Mauritius.—6,063 bags of the new crop were partly sold: grainy grey to good yellow, 42s to 45s; small grain rather soft: low to middling grey, 39s 6d to 41s 6d; brown, 34s 6d to 38s 6d per cwt.

Bengal.—1,590 bags partly sold: soft Dumma sorts, 32s to 36s, grainy yellow Goosery, 45s to 45s 6d; the remainder bought in above the value.

Madras.—3,755 bags native brown and yellow brought 32s to 35s. 5,007 bags grocery all found buyers: good to fine yellow, 45s 6d to 47s; soft dingy grey, 39s to 39s 6d per cwt.

Penang.—4,250 bags sold at last week's rates: brown and yellow, 35s to 42s per cwt.

Foreign.—250 casks Cubs, by auction, were chiefly bought in at 39s 6d to 43s 6d for low soft to good yellow, but a few lots since reported sold. 1,033 boxes Havana were bought in at very high prices. 27,350 bags Manilla were taken in at 41s for clayed. Privately, 2,000 bags low brown Siam sold at 32s. A cargo of brown Paraiba is reported for the United Kingdom at 26s 6d per cwt.

Refined.—The market has been steady, and there is no variation in prices this week. Low and common goods quoted 51s 6d to 52s; crushed, 48s 6d to 51s; pieces, 43s to 48s per cwt.

Molasses.—Few sales have been effected. A parcel of superior Antigua has sold at 17s per cwt.

Cocoa.—Common West India continues very firm, and several sales have been made privately. By auction, 833 bags Babia were bought in at 46s to 47s per cwt.

Coffee.—The market does not present any new feature to notice, and the public sales of plantation Ceylon passed off without much alteration in value,—267 casks 449 barrels and bags chiefly finding buyers: fine to fine fine ordinary, 63s 6d to 68s; low middling to superior colourly, 68s 6d to 80s. 135 cases Tellicherry sold, at and after the sale, at 65s 6d to 72s 6d. 1,375 bags Rio washed, pale and mixed to fair, 54s 6d to 61s per cwt. Few sales have been reported by private contract during the week.

Tea.—There has been a steady business done, the trade buying middling to good congous more freely. Common is rather scarce, and commands 1s 4d per lb. On Wednesday the public sales contained 16,518 packages, of which 3,600 sold at full rates. The remainder bought in above the value.

Rum.—Transactions to a moderate extent have taken place at former rates. Demerara proof, 2s 1d to 2s 2d; 300 puns 150 hhds East India, 1s 7d per proof gallon. The stock amounts to 25,420 puns 5,900 hhds, against 25,520 puns 4,270 hhds last year.

Rice.—There has been rather a large business done this week at stiffer rates for some kinds, and many holders will not sell unless at a further advance. Privately, Bengal sold from 9s 9d to 13s 9d; pinky Madras, 9s 9d; good Rangoon, 9s 6d to 9s 7½d; low and common, 7s 3d to 8s; Necrancie Arracan, 9s 6d. By auction, 3,610 bags pinky Madras brought 9s 6d to 10s. 5,708 bags Bengal: good white, 12s 6d to 13s 3d, part sold; the remainder taken in above the value. 5,570 bags Java were sold at 10s 6d to 13s. 1,460 bags Rangoon were taken in at 7s 6d to 8s. 1,300 bags cleaned were held at high prices: Moulmein, 15s 6d; Java, 17s 6d to 18s; Rangoon, 13s to 13s 6d per cwt. Deliveries continue far in excess of the landings, and the stock is reduced to 70,200 tons, against 86,000 tons last year.

Spices.—The market is again firmer, with considerable transactions at rather higher rates in several instances. 54 cases brown nutmegs were bought in above the value. 9 cases mace sold from 1s 3d to 1s 4d for common. 1,100 bags middling to good Singapore black pepper realised 4¼d to 4⅜d for common to good greyish black; and, by private contract, considerable business is reported, as well as in white. 308 bags Singapore white, by auction, were partly disposed of at 7¼d to 7⅜d; the remainder withdrawn at 7½d, being quite ⅛d dearer for the portion disposed of. Several parcels of Zanzibar cloves have changed hands, and 930 bags by auction partly sold at 4d to 4⅛d, being rather dearer; the remainder held at 4¼d to 4⅜d. Pimento is also firmer: 1,100 bags partly sold by auction at 4d to 4¼d per lb. Cassia lignea again shows an upward tendency, the last sales being at 103s to 108s. 42 casks good middling Cochin ginger went at 93s per cwt.

Sago.—1,350 boxes sold steadily: fine small bright Borneo, 20s to 21s; middling, 16s 6d to 17s; middling bold, 16s to 16s 6d per cwt.

Saltpetre maintains a firm position, and the market is steady. Privately, moderate sales have taken place in Bengal at 38s 6d to 42s for refraction 11½ to 3¾. 618 bags Bengal by auction sold as follows: refraction 4½, 42s; 10 to 22½, 36s 6d to 39s. 155 bags 25 cases Bombay, refraction 15¼ to 8¾, 33s 6d to 34s per cwt. The deliveries last week were 435 tons, leaving the stock 3,810 tons, against 2,990 and 6,620 tons in the two preceding years at same date.

Cochineal.—127 bags sold at previous rates: low and small Honduras silvers, 3s 1d to 3s 4d; Mexican silver, 3s 3d to 3s 8d. Yesterday, 166 bags Teneriffe were partly sold: silvers, 3s 6d to 3s 8d; black, 3s 7d to 4s 2d per lb.

Lac Dya attracts much more attention, and all the favourite marks are held for advanced rates. 1,300 chests, chiefly have sold by private contract, including D T at 10½d per lb. The present stock of 10,806 chests is smaller than for several years past, and the home deliveries continue very steady.

Dyestuffs.—Cutch remains without alteration. Gambier firm at 16s to 16s 6d per cwt for sound. Good Bengal Turmeric was sold at 16s 6d per cwt.

Drugs.—The first important sales this year commenced yesterday, and went off steadily. A portion of the goods will be sold to-day. Prices generally showed little alteration, so far as regards the leading articles. Camphor has sold at 8*l* per cwt, and the market still shows a strong upward tendency. Castor oil went rather dearer.

Shellac.—Fine ruby has found buyers at 8*l* 17s 6d per cwt.

Redwood.—40 tons sold at 5*l* 2s 6d to 5*l* 5s per ton, being 10s dearer.

Metals.—Scotch pig iron rallied in price, upon the rumours of an intended change in the commercial policy of France having received confirmation. Sales were at one time made at 58s 6d for the usual brands, but subsequently at 57s 3d per ton. Manufactured has experienced little variation. Several sales are reported in spelter at 21*l* 7s 6d to 21*l* 10s on the spot, and 21*l* 10s spring shipment. Foreign tin is depressed: Straits last sold at 132s, and 131s for cash; Banca quoted 139s per cwt. No change has been made in British. Lead is rather dearer.

Hemp.—There has not been any material improvement in the demand for Manilla or Russian this week. Fine jute remains very firm, but common to middling sorts are less readily saleable. Of 10,550 bales brought forward on Wednesday, 3,000 sold: good to fine, 16*l* 5s to 21*l*; low to middling, 12*l* to 16*l* per ton. Yesterday more inquiry again prevailed. Several parcels have been sold to arrive.

Linseed.—Several floating cargoes have found buyers. Marianople and Odessa, 50s 3d to 50s 6d. On the spot, East India commands 49s to 52s 6d per quarter.

Oils.—Linseed is in steady demand for home use and export at 27s 9d, and 28s to 28s 9d for forward delivery. Rape is depressed by forced sales: foreign refined, 38s; brown, 36s. Cocoa-nut is steady: Cochin, 43s to 44s; Ceylon, 41s to 42s. Palm dull, and fine offers at 45s per cwt. Olive flat: Gallipoli, 57*l*; other sorts, 50*l* to 53*l*. 100 tuns sperm have been sold at 93*l* to 94*l* 10s. Other kinds of fish quiet: cod, 31*l* 10s to 32*l*; Southern, 32*l* 10s; pale seal, 33*l* to 33*l* 10s per tun.

Turpentine.—There are sellers of rough at 9s 6d. Spirits advanced to 36s per cwt for American.

Tallow.—The market has been steady, with scarcely any change in prices since last Friday. First sort Y. C. is now worth 58s 6d; the same to the end of March; and 53s per cwt for the last three months.

Particulars of Tallow.—Monday, January 16.

POSTSCRIPT. Friday Evening.

Sugar.—The small public sales to-day, comprising 104 casks crystalised Demerara, 165 casks Barbadoes, and 1,100 bags Bengal, went off steadily, the latter bringing 45s to 46s 6d for Coosipore good to fine yellow. 154 bags from Port Natal sold at 43s to 46s. The week's business in West India amounts to 1,370 hhds. A cargo of Maroim sold for the United Kingdom at about 26s per cwt.

Coffee.—1,204 bags native Ceylon partly found buyers at 58s to 61s; and a few lots of plantation at previous rates. 800 bags East India, from Singapore, 58s to 61s 6d. 238 bags Neilgherry Hills, 72s 6d to 92s 6d.

Rice.—10,509 bags Necrancie Arracan were bought in at 9s 6d. 2,728 Ballam, 8s to 10s per cwt sold, for more or less heated.

Spices.—4 cases mace sold at 1s 4d to 1s 6d. 24 cases nutmegs, small to good bold brown, 1s 6d to 2s 5d per lb.

Saltpetre.—150 bags Bengal, refraction 3¾ to 4, went at 42s 6d.

Dyestuffs.—254 bales Bengal safflower went 5s dearer on the average, from 9*l* 10s to 12*l* 7s 6d per cwt for middling.

Oil.—224 casks palm sold at 44s to 45s 6d per cwt. Cochin cocoa-nut sold at 44s 6d to 45s; and Ceylon at 41s 9d to 42s 3d.

Tallow.—All kinds unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very steady this week. 6 and 10 lb loaves are held for higher prices for export. Nothing doing in crushed. In Dutch crushed some sales have been made at 31s 6d of the lower description f.o.b. in Holland: the demand is languid. In Belgian, nothing to report.

Green Fruit.—Contrary winds preventing arrivals, has improved the value of oranges. Some cargoes, sold by Keeling and Hunt at public sale, went at an advance of 2s to 3s per box. Saville sours in demand, confectioners taking an extra quantity this year. Lemons without alteration. Barcelona nuts in request. Black Spanish dull. Chestnuts 2s per barrel dearer.

Dry Fruit.—The principal business this week has been public sales of damaged currants and Chesme raisins; and on the whole there is no alteration in prices of sound goods. The deliveries are for both articles considerably above those of last January. Stocks not excessive; few more arrivals of any kind, with a large consumption expected.

English Wool.—The market continues firm, but holders show a desire to get out of stock.

Flax.—Market steady.

Hemp quiet, and few transactions to report this week.

Cotton.—Sales of cotton wool from Friday, 13th January, to Thursday, 19th, inclusive:—340 bales American, at 6¾d to 7d for fair to fully fair Mobile; 1,000 bales Surat, at 4d to 4¼d for ordinary to fully fair; 300 bales Madras, at 4¾d to 5⅜d for middling to good fair Tinnivelly. An improved demand has been experienced, and a fair amount of business transacted at the extreme prices of last week, and the market closes very firm. Yesterday, 440 bales, damaged and all faults, Surats, were sold at public sale at 3¾d to 4¼d, being very full prices. Sales to-day: 250 bales good fair Tinnivelly, at 5⅛d.

Silk.—Little or no alteration in the silk market. Last accounts from China tend to firmness in prices.

Tobacco.—Demand has almost been confined to limited selections for immediate consumption. Prices for choice qualities have been steady, but for ordinary sorts a fractional decline has been submitted to.

TIMBER.—Timber market has rather improved in respect to Swedish timber and Canadian pine deals. American spruce deals have likewise been lifted from the low rates of last autumn. Baltic deals and battens are flat and unchanged. In staves, no change. Shipbuilding woods are held for better prices.

LEATHER AND HIDES.—The leather trade of the week has been active. English butts of all weights, good heavy foreign butts, dressing hides, shaved hides, and calf skins have been among the most saleable articles. The supply was fully an average at Leadenhall on Tuesday, but the demand sufficed to diminish the stocks and to keep prices very firm. Hides show an upward tendency, although the transactions since the public sale of the 12th have not been large.

METALS.—There is a fair amount of business being done, with apparently an established confidence. Copper keeps in good demand for all descriptions. Iron has rallied somewhat, but Scotch pig is receding from the highest point touched this week. Tin is flat at the moment, and lower prices have been taken for foreign. Lead shows an improvement in demand, with stiffer prices. Spelter is in moderate request only. Tin plates in fair inquiry.

PROVISIONS.

Bacon market flat; very little doing. Shippers still holding for high prices, owing to the long prices they are obliged to give for pigs. The top price made was 63s sizeable, and 61s heavy, f.o.b., for immediate shipment. The orders for Friesland, sent out last week, were only part executed, owing to the great decrease in make. The market firm at 120s.

METROPOLITAN CATTLE MARKET.

MONDAY, Jan. 16.—The total imports of foreign stock into London last week amounted to 2,135 head. In the corresponding week in 1859 we received 2,563; in 1858, 541; in 1857, 1,237; in 1856, 1,105; in 1855, 2,371; and in 1854, 1,996 head.

Compared with Monday last there was a considerable falling off in the receipts of beasts from our own grazing districts, both as to number and quality. For most breeds we have to report a fair, but by no means active, demand, at unaltered currencies. The top price of beef was 4s 10d per 8 lbs. The show of most breeds of sheep was seasonably good. The mutton trade ruled somewhat heavy, at a decline in the quotations realised on this day se'nnight of 2d per 8 lbs, the top figure for the best Downs being 5s 4d per 8 lbs. We have to report a brisk sale for calves, the supply of which was limited, at 2d to 4d per 8 lbs more money.

SUPPLIES.

	Jan. 18, 1858.	Jan. 17, 1859.	Jan. 16, 1860.
Beasts	4002	4100	3960
Sheep	16840	19800	21120
Calves	106	98	135
Pigs	225	430	490

THURSDAY, Jan. 19.—To-day's market was moderatly supplied with beasts in fair average condition. Most kinds met a dull inquiry, at a decline in the quotations realised on Monday of 2d per 8 lbs. Sheep, though in short supply, changed hands slowly, at the late reduction in value. The top figure for Downs was 5s 4d per 8 lbs. We were rather scantily supplied with calves, and the veal trade ruled firm, at very full currencies.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	2	3	4	Prime Southdown sheep	5	0	5	4
Second quality ditto	3	6	4	0	Large coarse calves	4	8	5	2

Prime Scots, &c.	4	6	4	8	Large hogs	3	6	3	10
Coarse and inferior sheep	3	6	4	0	Small porkers	4	0	4	10
Second quality ditto	4	2	4	6	Suckling calves...each	18	0	22	0
Prime coarse-woolled do.	4	8	4	10	Quarter old store pigs	22	0	29	0

Total supply—Beasts, 1,022; sheep, 2,804; calves, 178; pigs, 312.
Foreign supply—Beasts, 182; sheep, 700; calves, 104.

NEWGATE AND LEADENHALL.

FRIDAY, Jan. 20.—The supplies of meat here, to-day, are seasonably extensinsive. Generally speaking, the demand is inactive, yet very little change has taken place in the quotations.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	8	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	4	5	0	Small pork	4	4	4	10

HOP MARKET.

BOROUGH, Monday, Jan. 16.—Our market during the past week has been less active than of lato, but prices remain firm at the following quotations:—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Jan. 20.—There is a fair demand for hops at fully late prices on speculation, home consumption, and for exportation.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Jan. 16.—During the past week the arrivals coastwise have been larger than the previous week, which caused a reaction in the trade, and with the exception of best samples of Regents, lower prices had to be submitted to. The following are this day's quotations:—York Regents, 90s to 130s; Lincolnshire ditto, 80s to 100s; Dunbar ditto, 100s to 120s; Kent and Essex, 70s to 100s; Perth, Forfar, and Fifeshire ditto, 70s to 100s; Rocks, 70s to 80s; Reds, 65s to 70s; French whites, 60s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, Jan. 19.—The arrivals of home produce have been moderate at this market, coastwise and by land carriage, since our last report, and trade tolerably good, at about previous rates:—York Regents, from 130s to 160s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 130s; ditto Cups, 70s to 90s; Dunbar Cups, 90s to 100s; and French, 80s to 90s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 15s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. A moderate supply, and a sluggish demand.

CUMBERLAND.—Meadow hay, 2*l* 16s to 4*l* 4s; clover, 3*l* 12s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 11s per load. Trade dull.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 4*l* 4s; clover, 3*l* 10s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. A fair demand.

COAL MARKET.

MONDAY, Jan. 16.—Buddle's West Hartley 15s 6d—Holywell 15s 9d—Tanfield Moor Bute's 14s 3d. LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 20.—A fair amount of business has been done this week in the face of the approaching series of public sales, which will commence here on the 25th inst., and when a variety of low foreign wools, besides 13,000 bales East India, will be offered.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 20.—Grain market steady. Good business in wheat at Tuesday's rates. Flour steady. Indian corn firm. Egyptian beans, 33s 6d. Oats, oatmeal, and barley quiet.

METALS

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, JAN. 20.—For manufactured iron there has been, throughout the past week, a quiet but steady demand for most descriptions, at about previous rates. In the Scotch pig iron market there has been great flatness, with only a moderate business doing, and that at some decline in prices. Copper continues to maintain its firmness. Lead and tin plates remain with little or no alteration.

The Gazette.

TUESDAY, Jan. 17.

BANKRUPTS.

G. Clarke, Streatham place. Brixton hill, carpenter.
W. R. Grover, Hand court, High Holborn, licensed victualler.
C. Pavin, Lime street, merchant.
G. White, Birmingham, grocer.
J. Peck, Birmingham, brass cock founder.
P. Andrew, Swansea, brewer.
G. William, and J. Dixon, Ecclesfield, Yorkshire, steel rollers.

SCOTCH SEQUESTRATIONS.

A. Gibb, Balass, by Cupar Fife, auctioneer.
A. Neilson, Bellshill, Lanarkshire, grain merchant.
T. Aitken, Dundee, currier.
C. Stewart, Milnhaugh, near Perth, manufacturer.

GAZETTE OF LAST NIGHT.

BANKRUPTCY ANNULLED.

J. Greig, Islington, baker.

BANKRUPTS.

J. Kevis (and not Keirs as before advertised), Old street, St Luke's licensed victualler.
E. Haskins, Shortwood, Gloucestershire, horse dealer and beer retailer.
T. L. Ingram, Lupus street, Pimlico, merchant.
S. Miskin, Rochester, butcher.
J. Varley, King's mill, Huddersfield, yarn spinner.
W. Grindy, jun., Longnor edge, Staffordshire, cattle salesman.
S. Ward, Croxhall, Derbyshire, dealer in osiers.
W. Chellew, Point, near Truro, commission agent and ship broker.
F. Giles, Dudley Port, Tipton, Staffordshire, iron, coal, and limestone master.
W. Ellis sen., and W. Ellis. jun., Nottingham, and Atherston, Warwickshire, scale board manufacturers.
W. Shrimpton, Compton, and Bishopstoke, Hampshire.

SCOTCH BANKRUPTS.

S. Salmond, horse dealer, Kirkcaldy, Fifeshire.
G. Moore, pawnbroker, Paisley.
Swinton and Fraser, builders, Dundee.
W. Burgess, South street, Andrew street, Edinburgh.

BUSTS OF STEPHENSON AND BRUNEL.—M. Brucciani has lately produced admirable busts of these eminent personages.

TITHE COMMUTATION.—Each 100*l* of tithe rent charge will, for the year 1860, amount to 110*l* 17s 8½d, which is nearly 2 per cent. above the last year's value, which was itself the highest of the 23 preceding years. The value for 1855 was only 89*l* 15s 8½d, or 21 per cent. below the value for the current year.

COMMERCIAL TIMES

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending January 7 amounted to 446,770*l*, and for the corresponding week of 1859 to 414,440*l*, showing an increase of 32,330*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 189,122*l*, and for the corresponding week of last year to 177,350*l*, showing an increase of 11,772*l*.

LONDON, BRIGHTON, AND SOUTH COAST.—The directors of this company have decided upon recommending the payment of a dividend for the half-year ending the 31st of December last of 3*l* 10s per cent. on the consolidated stock of the company, making the total dividend for the year 1859 amount to 6 per cent.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Jan. 16.—In the railway market there was a better demand for foreign shares, but no general alteration in prices. Pernambuco, however, are higher. Sao Paulo left off ¼ discount to par, and Rio Drainage ¼ premium. In American securities a rise took place in Illinois Central Free Land Bonds and one or two other descriptions, and a decline in the shares of the New York Central. Mines show an occasional advance, the principal movement being in St John del Rey. Joint stock banks were quiet, but steady.

TUESDAY, Jan. 17.—In the railway market there was less animation, but the tendency is still good, several of the leading British stocks showing an advance. A feature of the day was a rather active demand for Indian guaranteed descriptions, in most of which an improvement took place. In the colonial market, besides the rise in Indian, there was an advance in Atlantic and St Lawrence, Great Western of Canada, and Grand Trunk; the latter closed 40¾ to 41¼ ex interest. In foreign shares, Pernambuco and one or two French lines were weaker, while Lombardo-Venetian and Great Luxembourg were in rather better demand. No change occurred in American securities. The debentures of the Canadian, New Brunswick, and Nova Scotian Governments were firmer. Mines were in moderate request, but in several cases exhibited an improvement. There was no alteration of importance in joint stock banks,

WEDNESDAY, Jan. 18.—In most of the leading British railway stocks there has been a decline of ¼ to ⅜ per cent., and the tone was rather weak at the close. Indian guaranteed descriptions were generally unaffected by the fall in home stocks, remaining firm at the late advance. Great Western of Canada, however, and Grand Trunk receded. Foreign shares were dull, Lombardo-Venetian especially showing a slight reduction. The new San Paulo left off the same as yesterday, at ¼ discount to par. In American securities the first mortgage of the New York and Erie advanced. Mines generally showed a favourable tendency, although in one or two cases there was a reduction.

THURSDAY, Jan. 19.—The railway market was flat, and closed heavily at a nearly general decline. The depression was caused chiefly by speculative sales on the rise in the Bank rate, and extended to all the principal British stocks, except Great Northern. Foreign shares were again dull. In American securities there was a rise in the shares (assented) of the New York and Erie. Mines were in fair demand and firm. St John del Rey, however, showed a reaction. The tendency in joint stock banks continued favourable, and in several cases the final quotations were higher. Miscellaneous descriptions closed about the same as yesterday. Ocean Marine Insurance advanced to 2⅛ to ⅝ premium on a reported arrangement with another similar company. Universal Marine left off par to ¼ premium; Bank of Turkey ¼ discount to par, and the new Canadian loan 3¼ to ½ premium.

FRIDAY, Jan. 20.—Increased depression was apparent in the railway share market, most of the principal lines showing a decline of ½ to 1 per cent. Foreign lines participated in the general heaviness of quotations. In the colonial market, East Indian were steady at 101¼; and Great Indian Peninsular at 99½, 99⅝. Grand Trunk of Canada declined to 39¼; Scindes to 19½; and Calcutta and South-Easterns realised ⅛ premium.

IMPORTANT STANDARD BOTANICAL WORK
WITH NATURE-PRINTED PLATES.
Complete, price 6l 6s, half-bound, in Imperial Folio, with 51 plates.

THE FERNS OF GREAT BRITAIN and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Species and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

"This magnificent folio is the first-fruits of the Nature-printing process in this country. Those who have made the study of Ferns the recreation of their leisure hours will be delighted with this volume, not only as representing their old favourites in a truly living form, but on account of the great attention given to the representation of varieties, and the appearance of the plants in every stage of their development. Nothing is more puzzling to the young botanist than the varieties of form which the same species of Fern assumes according to locality and other circumstances. These cannot be made evident by descriptions alone; and certainly in no instance has any author ever attempted to illustrate so large a number of varieties of Ferns as are found here. Of the way in which they are Nature-printed in this book, we can safely say they are better done than anything of the kind we have seen before. Such beautiful representations of natural objects deserved good illustrative letter-press, and in the services of Mr Moore and Dr Lindley, Mr Henry Bradbury has enjoyed the aids of competent science. The description of the species, the synonyms, and the general remarks, are more extended than in any work hitherto devoted to the British Ferns. —ATHENÆUM, April 27, 1857.

"In the magnificent work written by Mr MOORE, edited by Dr LINDLEY, and illustrated by MR HENRY BRADBURY, we find the solution to the problem how to make Nature herself paint her own portraits with the most scrupulous fidelity.....We have here, on fifty-one large plates, pictures of all our British kinds of Ferns, with their principal variations of form presented to us with precisely the same appearance as would be exhibited if the living species were placed flat upon sheets of white paper. The mere tyro may identify in a few minutes any species by simply placing the living leaf side by side with its portrait, which reproduces it in the minutest detail and in its natural dimensions. In turning over the beautiful plates, it is hard to say which is most to be admired—the elegance and delicacy of the objects represented, the almost miraculous fidelity with which they have been produced, or the ingenuity and patience by which such results have been obtained. Not merely the forms, but the delicate veining of the foliage, and the fruit-heaps on the fertile leaves are brought clearly out; the veins, indeed, appear more distinctly than in the real objects, and in this respect are an assistance to the botanist in deciphering, as it were, the Fern itself.....Though the Volume on the British Ferns is what the French term an ouvrage de luxe, and, as such, deserves a place in the drawing-room wherever a love of Nature exists, it is not alone valuable for its pictorial merits. The text which accompanies the plates is written by one whose knowledge of the British Ferns is surpassed by none, and whose views on their classification are just and sensible."—QUARTERLY REVIEW.

Bradbury and Evans, 11 Bonverie street.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

CHRISTMAS TOILETTE REQUISITE and NEW YEAR'S GIFT.—Among the many articles of luxury and value purchasable at this season, none can be obtained possessing the manifold advantages of OLDRIDGE'S BALM of COLUMBIA. It nourishes the roots and body of the hair, imparts the most delightful coolness, with an agreeable fragrance of perfume. And at this period of the year prevents the hair from falling off, or if already too thin or turning grey, will stop its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

HOLLOWAY'S PILLS.—In London, and all large cities, where, from the multitudes congregated together, malaria and fogs are breathed over and over again, because the coldness of the higher regions prevents its rising far above their heads, the blood at this season becomes more or less impure. The strongest and healthiest lungs are incapable of producing pure arterial blood from suffocating fogs; hence the sluggishness, mental and corporeal, the weariness and irritability of many persons at this season of the year. Holloway's pills remove all these impurities, relieve the pulmonary irritation, lessen the spasmodic choking in the throat, restore quietude to the provoked lungs, renew their elasticity, and permit more oxygen to be absorbed, rendering respiration free and healthy

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES:
ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C

FLEET STREET.
A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

TEETH.—BY HER MAJESTY'S ROYAL LETTERS PATENT.—Newly-invented and Patented Application of Chemically-prepared INDIA RUBBER in the Construction of Artificial Teeth, Gums, and Palates.

MR EPHRAIM MOSELY,
SURGEON DENTIST,
9 Grosvenor street, Grosvenor square,

Sole Inventor and Patentee.—A new, original, and invaluable invention consisting in the adaptation, with the most absolute perfection and success, of chemically-prepared

INDIA RUBBER

in lieu of the ordinary gold or bone frame. The extraordinary results of this application may be briefly noted in a few of their most prominent features:—All sharp edges are avoided; no springs, wires, or fastenings are required; a greatly increased freedom of suction is supplied: a natural elasticity hitherto wholly unattainable, and a fit perfected with the most unerring accuracy, are secured; while, from the softness and flexibility of the agent employed, the greatest support is given to the adjoining teeth when loose, or rendered tender by the absorption of the gums. The acids of the mouth exert no agency on the chemically-prepared India Rubber, and, as a non-conductor, fluids of any temperature may with thorough comfort be imbibed and retained in the mouth, all unpleasantness of smell or taste being at the same time wholly provided against by the peculiar nature of its preparation. Teeth filled with gold and Mr Ephraim Mosely's White Enamel, the only stopping that will not become discoloured, and particularly recommended for the front teeth.

9 Grosvenor street, Grosvenor square, London; 14 Gay street, Bath; and 10 Eldon square, Newcastle-on-Tyne

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

KEATING'S COUGH LOZENGES.—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; he, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Caiuscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

THE NEW FRENCH REMEDY (Protected by Her Majesty's Royal Letters Patent), is specially prepared by the "ECOLE PHARMACIEN, PARIS," for effectually restoring the Nervous and Debilitated to a state of Vigorous Health and Manhood, when the system has been weakened by the Errors of Youth, or from any other cause. A Packet of this truly marvellous Remedy will be sent, free from observation, to any address, on receipt of 14 postage stamps.—Address, stating particulars, to Mons. DUVAL, Patent Medicine Agent, Birmingham.

NOTICE.—A Medical Book on the above Diseases, showing sufferers how they may safely cure themselves, free by post for one stamp to prepay postage.

Just published, in 1 vol. 8vo, with numerous Anatomical Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.

MR CURTIS, AUTHOR OF THE Medical Treatise "MANHOOD," may be consulted as usual, either by letter or personally, at his residence, 15 ALBEMARLE STREET, PICCADILLY, LONDON. The efficacy and harmless nature of the remedies employed by MR CURTIS, having been demonstrated by the most complete success during a practice extending over a period of 20 years, nervous sufferers of every class, including those afflicted with want of energy, loss of memory, pains in the back, self-distrust, functional incapacity or debility, have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

At home for consultation daily, from Ten till Three, and Six till Eight. Sundays from Ten till One.

REVIEWS OF THE WORK.

"CURTIS ON MANHOOD.—This is a truly valuable work, and should be in the hands of young and old."—SUNDAY TIMES, 23rd March, 1856.

"It is the duty of all men to study the laws of their body, no less than those of their mind. In the pages of this work will be found golden rules for regulating the one and preserving the other."—MARK LANE EXPRESS, March 31, 1856.

"The author has conferred a great boon by publishing this little work, in which is described the source of those diseases which produce decline in youth, or more frequently premature old age."—DAILY TELEGRAPH, March 27th, 1856.

"The book under review is one calculated to warn and instruct the erring, without imparting one idea that can vitiate the mind not already tutored by the vices of which it treats."—NAVAL AND MILITARY GAZETTE, 1st Feb., 1856.

An enlarged edition of the above work has just been published, and may be had of Piper and Co., 23 Paternoster row; and all booksellers. Price One Shilling, or free by post, in a sealed envelope, from the Author for 14 stamps.

RAIL PAID TO ANY STATION IN ENGLAND.—

VERY CHOICE MARSALA OR BRONTE WINE.

THOMAS NUNN and SONS have great pleasure in bringing this excellent yet economical Wine to the notice of their customers; the approvals of it continue numerous and most flattering; it is of the highest quality well matured and full-bodied, and so thoroughly clean tasted that it will go on improving for years to come; and has this advantage over Sherry, that it may be taken by the most delicate person without causing acidity in the stomach. Their selections have been made with so much care, that they have no hesitation in saying the most perfect satisfaction will accrue to every purchaser.

80s per doz. £8 14s per 6 doz. £15 10s per ¼-cask.

From THOMAS NUNN and SONS, Wine, Spirit, and Liqueur Merchants, (upwards of 43 Years Purveyors o the Honourable Society of Lincoln's Inn,) 21 Lamb's Conduit street, Founding Hospital.

*** A Priced List of every kind of Wine, Spirit, and Liqueur sent on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I. Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

is the only STARCH used in HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

City Establishment, 36 Gracechurch street; West-end Establishment, 189 and 190 Tottenham court road

ECONOMY AND EXCELLENCE.—

E. MOSES and SON, Merchant Tallors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules for self-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—

LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).

COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT,

made of various colours and patterns, particularly adapted to walking, riding, travelling, and business. This is universially acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beutifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

LAMPS, CHANDELIERS, HALL LANTERNS, &c.

The most extensive and carefully selected stock of French and English Lamps, comprising the choicest productions for this season, at prices much below those of former years. RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER 228 Piccadilly. London

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED,—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR

SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

Watches sent to all parts of the world free per post.
33 and 34 Ludgate hill, London, E.C.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

An Important Mineral Discovery was made whilst cutting the tunnel of the South Devon and Tavistock Railway, in the lands belonging to Sir Massey Lopez, Bart., Bickleigh, Devon. It has excited some sensation, and led to very great competition among mining men and others, to obtain the property. A lease has been obtained for 21 years,—royalty 1-15th.

THE BICKLEIGH VALE PHŒNIX

COPPER and TIN MINING COMPANY (Limited).

To be divided into 7,500 Shares of £2 each. £1 per Share to be paid up on allotment, whereof 10s per Share deposit to be paid on application. No Shareholder liable beyond the actual amount of his own Share.

DIRECTORS.

George Cyprian Hacker, Esq., Aldermanbury, and 38 Grove road, St John's wood.
William Thomas, Esq., Gresham House, and Clifton villa, Elm grove, Peckham.
John Williams, Esq., Bedford Ironworks, Tavistock, and Dartmouth park road, Hampstead.
(With power to increase to six).

AUDITOR—Henry Lloyd Morgan, Esq., 74 Cornhill.
BANKERS—Commercial Bank of London, Lothbury.
SECRETARY (pro tem.)—James Alexander Silver, Esq.
REGISTERED OFFICES—167 and 168 Gresham House, Broad street, City, London.

The Bickleigh Vale Phœnix Mine is brought before the public not as a speculative mining job, but as a fair prospective medium for investment, fully as remunerative as any of our first-class dividend-paying mines in Cornwall or Devon.

The past year has been remarkable for mining progress and mining success. £336,973 was paid in dividends, against £249,682 in 1858. The value of copper ores raised last year was £1,079,075, the quantity being 183,944 tons; and the average standard was as high as £133 6s—produce, 6¾. Tin advanced from 12 to 15 per cent., and lead maintained a good average position. The mining interest has reaped a good harvest for their investments generally, as, during the past year, numerous mines have entered the dividend list, whilst many others have increased their dividends.

This valuable mineral property is situated in the parish of Bickleigh, Devon, about 4 miles from Plymouth, and extends 800 fathoms on the course of the lodes; the main Copper lode, as opened at surface, is 12 feet wide, composed of a peculiarly fine gossan, and of quartz of a most favourable description. A fine Tin lode is also opened at the month of the tunnel from 4 to 6 feet wide, which, it is asserted, would of itself warrant the working of this grant, and with every prospect of a good dividend mine.

The stratum is a decomposed granite, similar to that of the rich Phœnix and South Caradon Copper Mines of Cornwall, and to the Devon Great Consols Copper Mine, as forming a junction of the granite and clay slate or killas,—mines remarkable for their great value as investments, and also as specimens of the extraordinary and lasting productiveness of the granite formation.

In driving the tunnel of the South Devon and Tavistock Railway, the main lode was intersected at about 11 fathoms below the point opened upon. At that shallow depth it is found producing rich carbonite, yellow and grey oxides, and malachite copper ores. The unusually large size of this lode, its perfect formation, the richness of the ore, together with the geological features of the surrounding district, continue to attract the attention of experienced mineralogists who have visited the spot; and all concur in pronouncing this the most important discovery yet made in the county of Devon, and advise more active and extensive operations, it being the general conviction among practical miners that the formation of copper lodes, producing near the surface such rich ore, with such an abundance of fine gossan on the back, can hardly fail to lead to a most valuable deposit of mineral, and at no great depth.

The purchase of this property has been secured for £2,000 in cash, and 1,500 paid-up shares; and as it is confidently expected that no further call will be necessary, the present proprietors have consented with this conviction to accept their 1,500 paid-up shares as only now 20s paid up; and thus put their shares on a par with those of the body of shareholders.

The limited capital thus raised will be ample for the effectual development of the mine. Abundant water-power can be obtained by arrangement to work the machinery at all periods of the year. The River Shaugh runs close to the tunnel, and a good road passes through the property to the Copper quay. Besides which, its close proximity to the railway station affords unusual advantages for economically carrying on the works.

Application for shares to be made at the bankers of the Company. Prospectuses and reports can be obtained at the Company's offices, where samples of the ore may be seen, and all information obtained.

THE BICKLEIGH VALE PHŒNIX

COPPER and TIN MINING COMPANY (Limited).

The Directors hereby give notice, that no applications for Scares will be received after Tuesday, the 31st inst.
Nos. 167 and 168 Gresham House, Broad street, City.

By post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand.

FORTY-FIFTH REPORT OF THE

LONDON JOINT STOCK BANK.

—A General Meeting of the Shareholders was held at the Banking house of the Company, in Princes street, Mansion house, on Thursday, the 19th of January, 1860;

Donald Larnach, Esq., Chairman.
Sir James Duke, Bart., M.P., Deputy-Chairman.

DIRECTORS.

William Bird, Esq.	Charles James Heath, Esq.
William Blount, Esq.	William J. Lancaster, Esq.
Ald. Sir George Carroll.	Donald Larnach, Esq.
Henry Christy, Esq.	Henry Lee, Esq.
Ald. Sir James Duke, Bart., M.P.	Sir John M'Taggart, Bart.
Philip William Flower, Esq.	John George Maclean, Esq.
Francis Bennett Goldney, Esq.	Ambrose Moore, Esq.
William Ormsby Gore, Esq.	John Timothy Oxley, Esq.
	John Joseph Silva, Esq.
	George, Tayler, Esq.

THE MANAGER—George Pollard, Esq.
SOLICITORS—Messrs Clarke and Merlee.

The accounts which the Directors have now the pleasure of submitting to the shareholders show that the net profits resulting from banking operations during the last six months amount to £71,530 0s 5d, and which has been appropriated as follows:—

£ s d	
37,500 0 0	in payment of a dividend at the rate of 12½ per centum per annum.
33,000 0 0	in payment of a bonus of 11s per share.
1,030 0 5	transferred to the guarantee fund.
71,530 0 5	

In consequence of the great diminution of the profits of the half-year ending on the 30th June last, occasioned by the depreciation during that period in the value of Government and Indian securities held by the Bank, the Directors have determined that for the future the fluctuations on such securities shall be adjusted through the medium of the guarantee fund, and it is expected that by this arrangement the future periodical dividends will be more nearly equalised.

The re-valuation of these securities on the 31st ultimo, as compared with the rates current on the 30th June last, showed a profit of £24,174 15s, and this sum has been carried to the credit of the guarantee fund, which now amounts to £229 369 18s 11d.

It will be necessary to call an extraordinary general meeting during the present half-year to fill up the vacancy at the board caused by the death of Mr Meek, and the Directors cannot refrain from expressing their deep regret at the loss of their late zealous and much-esteemed colleague.

The seats on the direction which become vacant on this occasion are those of

William Blount, Esq.,
Alderman Sir George Carroll,
William James Lancaster, Esq.,
Sir John M'Taggart, Bart,
John Joseph Silva, Esq.,

and these gentlemen offer themselves for re-election.

The dividend and bonus, free of income tax, will be payable on and after Friday, the 27th instant.

The preceding report having been read to the meeting by the Secretary, a dividend for the half-year ending the 31st December last, after the rate of £12½ per centum per annum, and a further division of 11s per share out of the net profits of the year ending as above, were declared by the Chairman.

Resolved unanimously,—That the report now read be received, and that it be printed for the use of the shareholders.

The following Directors, having retired by rotation, were unanimously re-elected, viz.:—

William Blount, Esq.,
Alderman Sir George Carroll,
William James Lancaster, Esq.,
Sir John M'Taggart, Bart., and
John Joseph Silva, Esq.

Resolved unanimously,—That the renewed best thanks of the shareholders be given to the Chairman and Directors, for the zeal and attention with which they conduct the affairs of the bank.

Resolved unanimously,—That the thanks of the meeting be given to Mr Pollard, for his able management during the past half-year.

(Signed) DONALD LARNACH, Chairman.

COMMERCIAL TREATIES AND FREE TRADE.

Within ten days at latest the Commercial Treaty which our Ministers have concluded with France will be most likely in the hands of our readers, and we shall then be able to discuss its details more satisfactorily than we can now. In general, there can be no doubt that, if confirmed by Parliament, it will bind us to reduce or abolish the duties on French manufactures, silks, wines, and brandies; and that France will, in return, engage to reduce considerably the duties which she now levies on English manufactures, coal, and iron. These bare outlines are not sufficient to enable us to form a complete judgment of the merits or demerits of this very important treaty, nor do we propose to discuss them; but we think that we may, with some hope of being useful, state the principles by which it will have to be estimated, and the mode in which, as Free-traders, we are bound to view all conventions of the kind.

In the first place, as Free-traders we must not bargain for commercial advantages. This is one of the truths which mercantile nations have found it most difficult to learn. In England, however, it is now generally understood that we are benefited by our trade with a country in proportion to the quantity and utility of the articles we import from it. We know that we obtain in that way many commodities which we could obtain in no other way, and that we economise our own labour by producing commodities in which we have the greatest facility, and in exporting them to change for others in which we have comparatively a disadvantage and difficulty. We are now aware that the value of a trade is derived from the comforts and enjoyments which we find by experience that it gives to us, and not in any balance of the precious metals or supposed pecuniary profit to be obtained by overreaching the foreigner. From this simple view of commerce, it follows that, so far from making it a matter of favour to France to reduce our duties on the importation of French manufactures, we ought for our own sakes to be desirous to reduce them. Every such duty diminishes the quantity of French commodities which we can consume, and therefore diminishes the daily benefits which France confers on us.

Secondly, we cannot be parties to a fraud on the French, or on any other foreign people. We cannot condescend even to use the language of bargaining. We cannot truthfully say to them, 'If you will take our productions free of 'duty, we will injure ourselves by taking yours free of duty,' because we believe that, by so taking those commodities, we shall not be injuring, but be benefiting ourselves. We cannot allow that the profitableness of any treaty with us shall be measured by France, or by any other country, on any other principle than this. We cannot permit it to be measured by any profit and loss account computed in accordance with maxims that we disown. Of course we cannot help the economical doctrines which may chance to prevail on the Continent. But at the conclusion of every commercial treaty, and during its negotiation, our statesmen are bound to mark their disbelief of influential tenets which they know to be unsound. If they do not do this, they run a great risk of endangering the best part of every sound treaty, because they submit it to the test of unsound principles, with which very likely it may be found discordant.

These are negative principles, and show what sort of commercial treaties we should not make. The following principles show what treaties we may make under fitting circumstances.

First, if we *happen* to have protective duties which are impediments to a foreign nation and undue advantages to our own manufactures, there is no valid objection to our engaging to relinquish them. It was an error to have them, and we shall gain by their abolition. If foreigners will relinquish also their protective duties on our commodities, we shall be doubly gainers. We must not, indeed, wait for foreign nations; we must not delay for a day the abolition of protective duties which press on the consumer because continental nations do not do the same. We are bound to carry out the principles of free trade, and it is our interest so to do. But if, during the period that the process is incomplete, and while we are in the act of carrying free-trade principles into effect, another nation would come to us and offer to reduce her protective duties, we may with propriety engage with it to abolish ours. To some extent this is our position with France. We have still a considerable number of protective duties on commodities imported from that country. We believe that the following statement of the duties levied on French articles is complete, or nearly so; and it shows that they are not unimportant:—

A Statement shewing the Amount of Duty levied on the undermentioned Articles imported from France during the Year 1858.

Articles.	Duty. £
Baskets	2,061
Butter	7,159
China and porcelain ware	1,671
Clocks	3,928
Coffee	4,311
Eggs	19,934
Embroidery	5,572
Flowers, artificial	20,412
Fruit	7,347
Lace	1,858
Boots and shoes and other leather manufactures	8,883
Gloves	48,839
Musical instruments	4,695
Oil, chemical	2,369
Paper hangings, &c.	6,713
Platting of straw for hats &c.	11,622
Silks	215,455
Brandy and other spirits	824,960
Sugar	275,702
Tea	14,358
Tobacco	52,696
Watches	14,940
Wine	164,855

Most, though not all of these duties are protective duties. The brandy duty, so far as it is higher than the English spirit duty, which it is by nearly as much again (the English spirit duty being 8s, and that on French brandy 15s), will partly rank as a protective duty.* And in so far as the commercial treaty recently concluded deals with these duties, it is not inconsistent with the principle of free trade. The departure from free-trade principles was in having such duties.

Secondly and lastly, it is not inconsistent with the principles of free trade, though it may be objectionable on other grounds, to engage with foreign countries to reduce duties which we have imposed for the sake of revenue only. If, for example, it should be desirable to cement our alliance with any particular country, we may, without any departure from abstract principles, give up some Customs duties which we have imposed on the importation of its productions. Whether we will do so or not is a question of *policy*. We have to measure the advantages of the duties which we relinquish, with the advantage of the amity which we hope to obtain. Such transactions are in the last degree delicate. They are apt to hamper us in the future. They often do not benefit us in the present. They connect us with the commercial matters of foreign countries so intimately, as frequently to endanger the alliances which they were designed to render closer. They complicate the fiscal system, which, especially in a country like this, is in other ways but too complicated already. Still, such a treaty is not prohibited by free-trade principles. It is, in fact, not commercial, but political. It relinquishes certain fiscal advantages for certain other advantages. In the case of the forthcoming convention with France, it will almost certainly be our duty to enter on a comparative estimate of this kind. We shall have to say whether we think the augmented intercourse we may obtain with France by a reduction of the wine duties, is or is not a sufficient equivalent for the recourse to other modes of taxation which it will render necessary. We must compare the wine duties with such modes of taxation, and form the best judgment we can. All we wish to say at present is, that it is not contrary to any abstract principle of political economy to sacrifice revenue duties for political reasons, though it may be, and for the most part is, delicate, dangerous, and inexpedient to do so.

THE OPENING OF THE SESSION OF 1860.

Her Majesty has seldom had so many remarkable observations to address to her Parliament as on the opening of this Session. The foreign policy of the country is more conspicuously successful than it has been for many years. The present Government have undoubtedly been aided by very powerful circumstances, but they are themselves entitled to very great praise. From the time of their accession to office till now, they have adopted in the affairs of Italy an intelligible, decided, and consistent course. They have been guided by a principle, and that principle is soon likely to be generally admitted, both abroad and at home, to be the only right one. The political horizon has often been troubled,—the movement in events has frequently been tortuous; but, notwithstanding all difficulties which the public know of, and probably many others which they do not know of, our Ministers have steadily adhered to the intelligible maxims which they laid down at their accession to office, and are now likely to see them successful. It is almost certain that the Italian people will, as our Ministers maintained they should, be permitted to settle for themselves the nature of the Government under which they will live; and, in consequence, a powerful, populous, and free State will be formed in the northern part of the Peninsula, at which England, at least, has every reason to rejoice, both as a free nation which is desirous of extending the blessing of liberty, and as a conservative nation which is desirous of maintaining political equilibrium on the continent of Europe. Her Majesty has rarely been able to inform her Parliament that her policy has been more successful, and that policy has even more rarely deserved so much success.

The Queen had likewise to congratulate her Parliament on two remarkable events, on two remarkable manifestations of English energy. The rebellion of the Sepoys in India is now completely at an end; no organised body of rebels is anywhere in arms from Cape Comorin to Nepaul; and the mass of the population, which never joined in the insurrection of our mercenaries, seems to be instructed by their failure and amazed at our valour. Whether solitary Englishmen will be able to travel to all parts of India with their former perfect security, may perhaps be doubted; but the enormous superiority of the English army over every possible native force was never more certain, and was never more universally admitted.

It is a slighter but more recent evidence of English spirit, that the bare supposition of our shores being insufficiently defended has called into existence a new kind of voluntary militia, which appears likely to be efficient,—which, if efficient, is inexpensive,—which is likely to stimulate, not only now, but hereafter, the national spirit,—which is completely in accordance with the self-helping habits of the English nation and the free principles of the English constitution. A Sovereign may well be pleased to have such subjects.

On these topics the Queen's Speech was retrospective. We knew what it told us before; but a remarkable ground for congratulation was given us in the course of the debate on the Address which we did not know with certainty before. We have lately expressed our anxiety lest, in our desire to aid the development of Italian liberty, we might be drawn into a vague, an inexplicit and unwritten compact of co-operation with the Emperor of the French. We feared that we might be endeavouring to have an understanding with a person whom no one can understand. We think we did not do the French Emperor less than justice; we have often defended him when it was not popular to do so; we have consistently maintained that he was a man of singular ability and an able statesman, when it was ordinarily said that he was an adventurer equally destitute of principles and of mind; but we have not permitted ourselves to be blind to his defects as an ally, particularly as an ally to us. We are a nation for the most part of men of business; our habits and tastes are thoroughly business-like, and we carry these tastes and habits into public affairs. We are very slow, but tolerably consistent. The Emperor of the French is certainly not consistent. We do not say that there may not be, or that he may not himself fancy that there is, some latent thread of unity running through his various designs. We do not profess to have found the key to all his intentions, or to be able to explain all that passes in his reserved and singular mind. Even if we had formed a theory on these subjects, we should not wish that it should be acted upon by this country. Such speculations must always be uncertain; and the policy of England ought not to be regulated by fine-drawn arguments and metaphysical conjectures as to the characters of foreign monarchs. We can look only to the *published* views of the Emperor and his conspicuous acts, and for our present purpose these are very sufficient. We see that his expressed opinions vary from day to day, and that the tendency of his visible policy is equally various. He may have known all through the year 1859 exactly what he was doing, but *we* have not known it. With a Monarch of this character it becomes the duty of a free nation to have only thoroughly defined relations and accurately expressed compacts. We may feel no moral distrust, but we must at least feel intellectual perplexity. If we make a compact with him, we must know precisely what it is; we must know to what we are pledging ourselves; we must have a precise idea of that which is about to be done. On this subject, the language of Ministers in the debate on the Address was distinct and satisfactory. "I have," said Lord Granville, "no official communication to make as to any "offensive or defensive treaty; and perhaps the best way of "answering all these questions is by stating that the "Government is perfectly unfettered, free from any pledge "or engagement or guarantee to, or with, any nation whatever."

The only point which gave rise to difference of opinion in either House of Parliament was one of much less national importance, though of some constitutional interest. Lord

* We believe that the French brandy costs now 22s per gallon, duty included, and British spirits 12s per gallon, duty included. If, then, the French duty be reduced to the level of the English, the French brandy would cost 15s per gallon as against 12s for the inferior article of British spirits. There can be little doubt that its free competition, therefore, with the cheaper article would, to some limited extent, cheapen British spirits, and *so far at least* the extra duty is protective, and goes into the pocket of the British manufacturer.

Grey contended that Her Majesty's Ministers ought to have convened Parliament in the autumn, to sanction their Chinese policy and authorise the expense which it may occasion. With regard to the unfortunate transactions which last year happened in the Peiho river, the defeat of our squadron, and the conduct of our Ambassador, we have expressed on several occasions our judgment with great care, and we do not wish at the present moment to weary our readers by again discussing them; but, though we retain all the opinions which we formerly expressed, we cannot but think that the motion of Lord Grey was premature, if not mistaken. We certainly do not *know*, and have no reason to believe, that our Ministers have hurried us into a third Chinese war. The paragraph on this subject in the Queen's Speech states that "moderate demands" have been made on the Emperor of China, and expresses a hope that it will not be necessary to employ force. Until we know what those moderate demands were, we are scarcely in a position to discuss the policy of the Government. It would have been absurd for Her Majesty to call a Parliament together last autumn merely for the purpose of saying to them:—'Unfortunate events have happened in China, of which I am about to require an explanation from the Emperor of that country. In the course of these events several English subjects have unfortunately been injured, and I am about to demand from the Chinese Government the redress of such injuries, unless I shall be satisfied by him that they were occasioned by the misconduct of my subjects themselves. In order to secure the due attention of the Chinese Government to these demands, I am about to send to that country a military force.' Parliament would not have been pleased to meet in November only to hear so much as this; and yet we hope that this, or something like this, has been the language employed by our Government. Yet we cannot concur with the Duke of Newcastle in thinking that the fact of the Treaty of Tien-tsin not having been formally ratified, and of our being consequently in technical diplomacy still at war with China, has a material bearing on the matter. The transactions at the Peiho river are undoubtedly the commencement of a new act in the complicated drama of Chinese hostilities: if a war should be occasioned by them, it would be substantially a new war. History will thus consider it, even though a technical diplomacy may argue that it is not so. If the course adopted by our Government is of such a kind as to render the war more inevitable,—if they have asked from the Chinese Government what they know that Government will never grant,—if their policy, in short, has been definitely hostile to China, and not merely provisional and tentative; in that case we should heartily concur with Lord Grey; we should think that they have incurred a very grave responsibility, and that they should have convened Parliament to take its due share in that responsibility. For our own parts, we believe that when the facts are accurately known, the policy of the Government will be known to have been anxiously provisional,—studiously cautious.

On the subject of Parliamentary Reform we shall not speak here. But there is another subject which is much more likely to be forgotten, and to which, at the present time, it is peculiarly difficult to ensure due attention—we mean economy in our public expenditure. The House of Commons has for some years past, in fact, rather increased than checked the outlay of public money. We have in another article endeavoured to analyse some of the causes why the public money does not obtain for the public the full money's worth; and we shall on an early occasion inquire whether the House of Commons is not itself deeply to blame on this subject, and whether it is not more ready to give loud cheers to vague eulogiums on economy in finance, than to take the pains and adopt the measures which are needful to enforce it in detail.

CONSIDERATIONS FOR REFORMERS.

M. Kossuth has given us this week a very instructive lesson on the theory of a liberal constitution, but the warning we derive from it is considerably different from that which he intends us to derive. He has told us that the delegative rather than the representative system was the one openly aimed at in Hungary after the change in 1848. Each delegate was *expected* to give voice to the opinions of his constituents, and if he did not do so, his appointment might be formally cancelled by those constituents. "It was a "maxim with the Hungarian nation that members of Par- "liament, being elected to represent their constituency, "were under the obligation of representing the opinions of "their constituency. Accordingly, they were desired to "keep, by continual reports, the municipality represented "by them in constant knowledge of all the proceedings in "Parliament, and especially of their own votes. These "reports, read and discussed in the general assemblies of "the municipality (where every elector had the right to "speak and to vote), afforded occasion for a formal mani- "festation of the opinions of the constituency on every sub- "ject under consideration in Parliament, and whenever an "essential difference of opinion happened to arise between "the constituency and their representative, either the re- "presentative resigned his seat, or else the constituency, by "a majority of votes, in a general assembly convoked ex- "pressly *ad hoc*, was free to declare their confidence for- "feited, to revoke the sitting member, and to elect another "in his stead." This M. Kossuth thinks the perfection of a popular system. To us it appears one of the worst forms of popular government ever invented, and and we sincerely regret to see that the general tendency of opinion amongst the party of Radical Reformers in this country points in this direction. We believe that if the old English constitution had ever attempted to give a self-government of this minute kind to the people of England, the British constitution would have never been successful at all. Self-government in a political sense ought to include two things,—first, the deliberate selection of general political *principles* by the electoral classes, and the choice of men who are willing to accept these principles and likely to apply them in the most adequate manner to the cases which actually occur; and. secondly, what is quite as important, the popular self-restraint which shall leave the representatives so chosen to feel the personal responsibility of their position, and which shall avoid hampering them with minute instructions on points which their representatives have the time and the necessary data to consider maturely, but which they themselves have not usually either time, data, or capacity to decide with any approach to wisdom. The Hungarian plan apparently attempted to make the whole people not only politicians, but senators, if not statesmen; and as not only political spirit, but time, early education, and study, are absolutely necessary as much for a senator as for any other professional man,—the plan must eventually have failed.

But we should not occupy our readers with the mistakes of an obsolete Hungarian constitution, if the tendencies to the very same error were not deep, and, unfortunately, practically mischievous in the democratic creed of English Radicals at the present day. Their belief is, that statesmen should, in preparing their measures, consult exclusively the parliamentary favour any scheme is likely to attain; and that the parliamentary favour should, in its turn, be absolutely determined by the electoral favour it may be likely to win on the hustings. Nor is it only a belief. It is a view which, unfortunately, exercises the most practical influence on our present statesmen. "One of the greatest things to be considered," said Lord John Russell, in his interview with the Radical Reformers on Thursday last, concerning the coming Reform Bill, "is to obtain a measure that is likely to pass through Parliament." We are not so unreasonable as to complain that statesmen should have a view to practicability in preparing their measures. It *is* important that the Reform agitation should be ended, if it can be ended with a wise measure, and not with a mere concession to false principles. But, we fear, it has now come to pass that not merely is this "one of the greatest," but *the* greatest, if not the only consideration which any statesman thinks about in discussing this question. He does not ask what is desirable on principle,—what will best develop the fundamental idea of a representative constitution,—what will give representation to a new class without taking it away from the old,—what will extend the number without diminishing the variety of the opinions and interests represented,—what will multiply the compensating elements between the various sorts of constituencies, while increasing the strength of the whole political system:—such questions as these are not those which statesmen legislating upon Re-

form now think of asking, but how "to obtain a measure that "is likely to pass through Parliament."

Now if this were the only instance in which legislation of this kind is to be apprehended,—if the question of Reform once settled for a time, all other questions were likely to be considered as much on their own intrinsic merits as ever,—we should be content, if not actually to acquiesce in the general cry for a settlement of some sort of the Reform Question, however unsatisfactory, for the sake of peace, at least not strongly to oppose it. But when we note that the Reform Bill generally advocated, and apparently most likely "to pass," is one which will of itself aggravate this tendency to ask on all other subjects, *not* what is politically right, but what will be most acceptable to Parliament,—the votes of Parliament being in their turn more and more abjectly conformed to incipient cries got up among the constituencies, without any large portion of the electors having a *bonâ fide* or duly formed opinion on the subject,—we think it our bounden duty to bring seriously before the public view the very great importance of modifying our electoral system by definite principle, and not by mere regard to the exigencies of the hour.

There is a very dangerous tendency in all purely democratic movements to strike at the root of the constitutional principle of representation as opposed to mere delegation,—a tendency not always clearly understood. We do not believe that English Democrats have as yet realised, or have any disposition to adopt formally, the principle which turns their representatives into mere registering machines. But all their modes of thought tend in this direction, and all their practical influence in the House of Commons tends in this direction, for the following reason. Their great principle is, the rights of numbers, of *numerical majorities*. They would give the uneducated, ignorant masses of this country the power to elect representatives not only for themselves, but for all the other more educated classes above them, simply on the ground that they happen to outnumber them very greatly. And not only will these representatives represent only one class in the country, but,—which is the point we want just now to bring out,—they will be far less of true representatives, far more of mere delegates, than now. Just in proportion to the uniformity of opinion in the electing class, is the pressure exerted on a representative. Hence the nominees of large democratic constituencies like Marylebone and the Tower Hamlets, and of such constituencies as we see in the United States of America, have far less deliberative scope and responsibility than the nominees of smaller and more educated constituencies where opinions vary, and where there is a real division of thought and conviction in the constituency. The members for enormous uniform constituencies of the working class are always somewhat in the position of the delegates to a Trade's Union. They know that there is one prejudice, one cry, one uniform kind of prepossession among their constituents, which overrules all independent thought. Get up a cry against Routine, for instance,—what member for a democratic constituency will dare to face it? He knows that the mere word, quite apart from any idea it may contain, will carry his constituents away,—and he accordingly joins the cry against Routine. On the other hand, the member for an educated constituency will dare to think for himself. He will know that, whatever opinion he adopts, he can rely on securing, if it be adopted on careful consideration, the adherence of a considerable section of supporters, and accordingly he fulfils some of the functions of a *representative* as opposed to those of a delegate.

We fear that the tendencies of democratic politicians are even more dangerous in this way than in any other. By supplanting all the constituencies where considerable varieties of thought and feeling prevail, and putting uniform masses of class prepossessions in their place,—they will not only set one class of the people above all the others, but increase the tendency in that class to dictate to their representatives. Representation always degenerates into delegation in democratic constitutions. There is no tendency more marked and more dangerous than the tendency to the same change in England. And we find in this a fresh argument against the attempt to make our new Reform Bill a mere concession to false democratic principle, instead of a statesmanlike remedy for the deficiencies in our present representative constitution.

EFFICIENCY AND ECONOMY.

Nothing is more easy than to write about economy, and nothing is more difficult than to write usefully. No subject lends itself more easily to mere declarations, and none is more difficult to treat with precision. In the present state of English finance, however, it is very necessary that it should be treated of, and that our remarks upon it should be practical in their character.

Our expenditure, as it is well known, has of late years increased very rapidly, but we sometimes forget how very rapidly in many branches it has done so. A few figures, however, will put this before us more easily than any words can do. Take our army and navy:—

	1852.	1858.	1859.
	£	£	£
Army.....	9,408,000	12,010,000	13,200,000
Navy.....	6,705,000	9,839,000	12,782,000

And the estimates for these services for the present year will be certainly increased. After all this expenditure, however, we are year by year told that the state of our army and navy is unsatisfactory,—that it is unworthy of the greatness and insufficient for the safety of the country,—that large alterations and reforms (which, in the end, come to mean increased outlay) are required in them. We are continually spending more, but we are not sure that we are proportionally nearer to the end in view. Persons who are entitled to very great respect continually assure us that such is not the case.

We are very far from hinting or implying that any particular persons whom we should be able to name are to blame in this matter. We believe that almost all our parliamentary statesmen are very sincerely desirous of economy in the public expenditure, and that some of them are warmly anxious for it. We believe that the greater part of the members of our permanent civil service are sedulous in their habits, attentive to their work, and alive to the importance of it. In the higher branches of that service especially we know that there are men of the very highest attainments, who feel the deepest sense of responsibility, and who are, as men of business, quite equal to any men in the country. But it is not certain that any work will be well performed because competent persons are endeavouring to do it. They must endeavour to do so in a proper method. In the present case, it is impossible not to avoid a suspicion that the great expenditure which we are at present making might be rendered more productive. We will not refer to the corresponding items in the accounts of continental countries, and of France especially, because there may be doubts as to the perfect accuracy of those figures. A despotic Government prepares its pecuniary statements under no efficient check; the nation have no means of learning anything which it does not condescend to tell them, can ask no question of it, and can compel it to acknowledge no mistakes. We can never feel the same reliance on the published accounts of absolute monarchies on delicate points that we feel as to our own; and military expenditure is the most delicate of all points. It is the one which such Governments are always most anxious to disguise from foreigners, and sometimes from their own subjects. But, at the same time, it is impossible not to remember that our wealth is, in proportion to our population, much greater than that of France, or than that of any great military nation. If we look attentively at the figures which show how immense our annual outlay is, we cannot forget that poorer countries obtain more at a less cost, and we can hardly evade a strong suspicion that some subtle cause prevents our receiving in exchange for our money all that we should receive for it. At any rate, it is very disheartening to be told that the state of our army and navy is still unsatisfactory, notwithstanding that we spend so large and so increasing a sum year by year on what seems the vain hope of making them what they should be.

Three causes may be pointed out which prevent our pecuniary arrangements from being so efficient as we should anticipate that they would be. One of these is the fault of the nation itself. We do not upon this subject work consistently. Public opinion is upon this point, as upon all others, intermittent. This year we are occupied with one topic, and next year we shall be absorbed in some other. A few years ago we were improperly inattentive to our national defences; we will not say that we are now too attentive to them, because an unusual exertion is now required to counterbalance previous

shortcomings; but we certainly do not wish that the subject of our national defences should *permanently* engross as much of our national attention as it at present does. We are now trying to counterbalance former neglect by present zeal. A large expenditure for business objects cannot, however, be efficiently conducted in this manner. We should look forward with defined objects; we should be careful to have fixed intentions; we should see that year by year we are somewhat nearer the end which we desire. Such are the conditions of success in business, and military expenditure is a purely business outlay. As yet we have not shown either the fixity of aim or the steadiness of scrutiny which are necessary to ensure our success. We must expect to pay the penalty of this. We boast that we are a free nation,—we boast that we govern ourselves; and we must not, therefore, be surprised that our faults as a nation should induce corresponding defects in our Government.

A second cause has a similar effect, although its nature is somewhat different. We have nowadays very frequent changes of administration; the Ministers who are responsible for our military and naval expenditure change very frequently, and, in consequence, their plans change. One Minister has one sort of scheme, and his successor has a different one. At the present moment, when so many new theories and discoveries are propounded on military and naval matters, this perpetual change in the directing and selecting mind is of peculiar importance and of special danger. Each successive Minister is tempted to consider the favourite ideas of his predecessor as crotchets and blunders, to throw them aside while they are still incomplete, and to begin some new work of his own. We need not pause to point out how unfavourable this change of plans is to success in a task peculiarly requiring continuity of idea and persistency of effort.

A third cause, which is almost opposite in its nature to both of those which we have mentioned, contributes its effect and helps to make our expenditure for defensive purposes less efficient than it should be. We have made great improvements of late years in our permanent civil service, and we have established a system of public competition for its first steps which may hereafter produce greater improvement. But we must not forget that the public service still differs in one important respect from other kinds of business life in this country, and especially from mercantile life, and that it differs from them for the worse. All public servants, except a few in the very highest rank, enter the public service when still very young,—are occupied for many years in routine occupations. After many years they are called to fill posts requiring thought and responsibility. They are trained to be clerks for a very long time—they are clerks and nothing more; at a mature age they are expected to become men of business. In mercantile life the reverse is the case. Almost all men of business, it is true, receive a preliminary education in clerks' work; but, in ordinary cases, it is not a very long one. A marked line is drawn at an extremely early age by the possession of *capital*. Those who have it go into trade on their own account, and those who do not possess it cannot do so. The former undertake the responsibilities of action; they are early called on to show whatever discretion, nerve, and judgment nature may have given to them. The latter continue all their lives in occupations which comparatively are of a routine character. In consequence, the transactions of mercantile life are managed by men at the head early trained to be at the head, and by subordinates through their whole lives trained to be subordinates; and this is the best way in which they could be managed. On the other hand, in the public service a man only arrives at the head after a long training in routine labour; and it is not surprising that he often finds himself in a position to which he is altogether unfitted. Most men of business can *feel* what would become of their business if it was managed by their head clerk. They know by daily observation how little a man who has always been a subordinate, who has been accustomed to look for orders, to execute orders minutely, to keep accurate records of daily details, is fit for the responsibilities of business and the nice decisions upon which profits depend. The public service is now, and has long been, clogged with men of the best intentions, of the most regular habits, of the most entire mastery of detail, who are, nevertheless, as different from the men who ought to be in their places as a ledger-keeper is different from a merchant. The effect of this upon their efficiency is evident, but its effect upon economy of expenditure is almost equally unfavourable. A man of mere routine knowledge will, on any occasion out of his routine, be expensive in the wrong place and economical in the wrong place. He will be ready to spend too much in the way he has been accustomed to; he will not be ready to spend anything in the way he has not been accustomed to. In the present times, when such persons continually receive orders from their superior to adopt new schemes and try new experiments, this defect has the very worst consequences. Without any fault whatever, the improvements directed from above are impeded and thwarted by a passive immobility below. Money is spent, but it is not spent with judgment, because those who have to regulate the detail of its expenditure are trained to routine habits, wedded to past rules, and helpless to adapt themselves to new circumstances.

We cannot at the end of an article venture to suggest an easy remedy for this state of things. We know how easy it is to write suggestions on paper, and how difficult in a complicated administrative matter of this sort it is to embody even a fraction of them in practice. But the first condition of an effective remedy is the ascertainment of the disease. We shall be nearer to a distinct conception of the reasons which make our money less efficient than it ought to be, if we remember that we ourselves are not consistent in our wishes or steady in our efforts,—that the Ministers who direct the expenditure of our money change but too frequently,—that the effect of these vicissitudes is enhanced by a permanent obstruction inherent in the present constitution of our public service, which prevents any new experiment from being cheaply tried, and prevents many from being effectually tried.

THE MONEY MARKET.

Three weeks ago we intimated our conviction that the rate of interest would probably rise during the present year. We pointed out that the savings of the country, which had, since the shock of the commercial crisis, increased much more rapidly than the investments in trade, were again apparently in process of absorption,—judging by the fact that in the course of the year the reserve of notes in the banking department of the Bank of England had diminished by three millions, the bullion by 2,600,000*l*, and the loans increased by three millions.

Our prediction has been verified somewhat sooner than we had ourselves expected. The diminution in the bullion reserve of the Bank was so steady as to induce the Directors last week to raise the rate of interest from 2½ per cent., at which it was fixed in the summer, to 3. At present the drain of gold does not appear to have been arrested by the step of last week; and, should it continue, the rate of discount must again shortly be raised.

We are informed that a movement is beginning which, if it should attain larger dimensions, will tend to increase the flow of gold from this country. Some of the Indian houses have, we believe, been exporting fine gold in small bars, principally of 12 oz. weight, which, being worth about 84s per oz., cost about 50*l* sterling each. These are said to be shipped to Bombay, then stamped after assay, when they pass for 500 rupees. A small number only have hitherto been sent, but as this is the first approach that has been made to a gold currency in India, it may be worth noting. Eleven hundred of these bars were, we believe, sent out by the last mail. The Bank got 3*l* 18s per oz. standard for their fine gold, instead of 3*l* 17s 10½*d*, the Mint price, at which any one can buy gold in the shape of gold coin. But it answers the purpose of parties wanting to send out fine gold bars to give this small increase of price, instead of melting sovereigns and taking out the alloy, so as to convert them into fine gold. We mention this not, of course, in any way as affecting the immediate prospects of the money market, but as a novelty which may possibly be the beginning of an important movement, if the use of these 500-rupee gold bars should be found so convenient in India as to cause the substitution of gold for silver currency there in any considerable measure.

OPENING OF PARLIAMENT.

THE QUEEN'S SPEECH.

THE Parliamentary Session commenced on Tuesday last. Annexed is a copy of the Queen's Speech:—

MY LORDS AND GENTLEMEN,

It is with great satisfaction that I again meet you in Parliament, and have recourse to your assistance and advice.

My relations with Foreign Powers continue to be on a friendly and satisfactory footing.

At the close of the last session I informed you that overtures had been made to me to ascertain whether, if a Conference should be held by the great Powers of Europe, for the purpose of settling arrangements connected with the present state and future condition of Italy, a Plenipotentiary would be sent by me to assist at such a Conference. I have since received a formal invitation from the Emperor of Austria and from the Emperor of the French to send a Plenipotentiary to a Congress, to consist of the Representatives of the eight Powers who were parties to the Treaties of Vienna of 1815; the objects of such Congress being stated to be, to receive communication of the treaties concluded at Zurich; and to deliberate, associating with the above-mentioned Powers the Courts of Rome, of Sardinia, and of the Two Sicilies, on the means best adapted for the pacification of Italy, and for placing its prosperity on a solid and durable basis.

Desirous at all times to concur in proceedings having for their object the maintenance of peace, I accepted the invitation, but at the same time I made known that, in such a Congress, I should steadfastly maintain the principle that no external force should be employed to impose upon the people of Italy any particular Government or Constitution.

Circumstances have arisen which have led to a postponement of the Congress, without any day having been fixed for its meeting; but, whether in Congress or in separate negotiation, I shall endeavour to obtain for the people of Italy freedom from foreign interference by force of arms in their internal concerns, and I trust that the affairs of the Italian Peninsula may be peacefully and satisfactorily settled.

Papers on this subject will soon be laid before you.

I am in communication with the Emperor of the French with a view to extend the commercial intercourse between the two countries, and thus to draw still closer the bonds of friendly alliance between them.

A dispute having arisen between Spain and Morocco, I endeavoured, by friendly means, to prevent a rupture; but, I regret to say, without success.

I will direct papers on this subject to be laid before you.

My Plenipotentiary and the Plenipotentiary of the Emperor of the French having, in obedience to their instructions, proceeded to the mouth of the Peiho river, in order to repair to Pekin to exchange in that city the ratifications of the Treaty of Tien-tsin, in pursuance of the 56th Article of that treaty, their further progress was opposed by force, and a conflict took place between the Chinese forts at the mouth of the river and the naval forces by which the Plenipotentiaries were escorted.

The allied forces displayed on this occasion their usual bravery, but, after sustaining a severe loss, were compelled to retire.

I am preparing, in concert and co-operation with the Emperor of the French, an expedition, intended to obtain redress and a fulfilment of the stipulations of the Treaty of Tien-tsin.

It will be gratifying to me if the prompt acquiescence of the Emperor of China in the moderate demands which will be made by the Plenipotentiaries shall obviate the necessity for the employment of force.

I have directed that papers on this subject shall be laid before you.

An unauthorised proceeding by an officer of the United States in regard to the Island of San Juan, between Vancouver's Island and the mainland, might have led to a serious collision between my forces and those of the United States. Such collision, however, has been prevented by the judicious forbearance of my naval and civil officers on the spot, and by the equitable and conciliatory provisional arrangement proposed on this matter by the Government of the United States.

I trust that the question of boundary out of which this affair has arisen may be amicably settled in a manner conformable with the just rights of the two countries, as defined by the first article of the Treaty of 1846.

The last embers of disturbance in my East Indian dominions have been extinguished; my Viceroy has made a peaceful progress through the districts which had been the principal scene of disorder, and by a judicious combination of firmness and generosity my authority has been everywhere solidly and, I trust, permanently established. I have received from my Viceroy the most gratifying accounts of the loyalty of my Indian subjects, and of the good feeling evinced by the native chiefs and the great landowners of the country. The attention of the Government in India has been directed to the development of the internal resources of the country, and I am glad to inform you that an improvement has taken place in its financial prospects.

I have concluded a treaty with the Tycoon of Japan, and a treaty regarding boundaries with the Republic of Guatemala. I have directed that these treaties shall be laid before you.

GENTLEMEN OF THE HOUSE OF COMMONS,

I have directed the estimates for the ensuing year to be laid before you. They have been prepared with a view to place the military and naval services and the defences of the country upon an efficient footing.

I am glad to be able to inform you that the public revenue is in a satisfactory condition.

MY LORDS AND GENTLEMEN,

I have accepted with gratification and pride the extensive offers of voluntary service which I have received from my subjects. This manifestation of public spirit has added an important element to our system of national defence.

Measures will be laid before you for amending the laws which regulate the representation of the people in Parliament, and for placing that representation upon a broader and firmer basis.

I earnestly recommend you to resume your labours for the improvement of our jurisprudence, and particularly in regard to bankruptcy, the transfer of land, the consolidation of the statutes, and such a further fusion of law and equity as may be necessary to insure that, in every suit, the rights of the parties may be satisfactorily determined by the court in which the suit is commenced.

I am deeply gratified to observe that the great interests of the country are generally in a sound and thriving condition; that pauperism and crime have diminished; and that, throughout the whole of my Empire, both in the United Kingdom and my colonies and possessions beyond sea, there reigns a spirit of loyalty, of contentment, of order, and of obedience to the law.

With heartfelt gratitude to the Almighty Ruler of nations for these inestimable blessings, I fervently pray that His beneficent power may guide your deliberations for the advancement and consolidation of the welfare and happiness of my people.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

(FROM A CORRESPONDENT.)

IV.

(CONTINUED FROM JAN. 21.)

HAVING thus said all that seems needful to be said upon the numerical aspect, either positive or proportionate, of the criminality of England and Wales, viewed in each county as a whole, and independent of the prevailing characteristics of the districts, it is necessary to consider the subject of crime, when these elements are taken into account. Of course the great integral division of the population is that which separates the town inhabitants from those of the country. The two following tables, then, will indicate similar information to that which was in the first instance recorded,—(1) in the case of the county districts apart from the towns, and (2) in the case of the borough population of each district apart from the country people. In the tables the aggregate of results for the several boroughs is stated in the case of each county; since a more minute classification, in the present instance, is impossible. It may be repeated that the total number of boroughs with police establishments in England and Wales is 174.

Little would be gained by going over the ground traversed in the consideration of any tables which concerned the police districts of England and Wales divided arbitrarily into town and county populations. The characteristics and mode of life of the inhabitants of the various county and borough districts are so diverse, that no practical benefit would arise from any classification according to the results of crime. Any arrangement that is made must be based, as far as possible, upon identity of calling in the different districts. Of course, the manufacturing and the agricultural are the two main callings of the English people. But these are oftentimes mingled in the same district, without a possibility of separation; and mining and maritime populations tend to make the arrangement still more intricate. The following list, however, partly taken from Mr Redgrave's labours, and partly supplying what he omitted, will perhaps be of service to judge of the general results of as careful a division of the counties population as circumstances permit. This catalogue divides the districts into five heads:—

(1). The Eastern agricultural districts.
(2). South and South-West agricultural districts.
(3). Chief Midland agricultural districts.
(4). Chief manufacturing districts.
(5). Miscellaneous districts, in which the counties, from geographical position, or character of population, do not fall within the range of the other divisions.

State of Criminality in Counties.	Population	Proportion of known Criminals to population. 1 in every	Numbers of known Criminals.	Proportion of Persons proceeded against to population 1 in every	Numbers of Persons proceeded against.
Total of the 41 Counties (including the Principality), of England and Wales	10,948,406	144	76,010	182	107,504
Eastern Agricultural District:—Essex, Norfolk, Suffolk, Lincoln	1,269,908	115	10,983	92	13,724
South and South-Western Agricultural Districts:—Hants, Wilts, Dorset, Somerset	1,022,071	104	9,774	73	13,893
Chief Midland Agricultural Districts:—Cambridge, Northampton, Bedford, Herts, Oxford, Bucks, Berks	919,513	103	8,890	68	13,489
Chief Manufacturing Districts:—Chester, Derby, Durham, Gloucester, Lancashire, Leicester, Nottingham, Salop, Stafford, Warwick, Worcester, York	4,691,176	150	31,216	155	30,119
Remaining Districts:—Cornwall, Cumberland, Devon, Hereford, Huntingdon, Kent, Monmouth, Northumberland, Rutland, Surrey, Sussex, Westmorland, Wales	3,035,738	200	15,147	83	36,279

Of these districts, the greatest number of persons proceeded against judicially come from the last, or the miscellaneous division; the largest number of known criminals from the manufac-

turing districts. These results, however, are irrespective of population; and form only a portion of the sum totals, which show

107,504, as the number of persons proceeded against, and
76,010, as the number of known criminals,

in the country districts of England and Wales. When the population of each separate division of counties is taken into account, the following results appear :—

I. The average proportion of known criminals to the entire population of the counties being 1 to 144; the Midland district, with proportion of 1 to 103; the South-Western, with 1 to 104; and the Eastern agricultural district, with 1 to 115, are above the average for England and Wales. The manufacturing and miscellaneous districts, with the respective proportions of 1 to 150 and 1 to 200, are below the average.

II. The average proportion of known criminals to the entire population of the country districts is 1 to every 102. Hence, the only district wherein the average falls below this point is the manufacturing one, the proportion in which is 1 to 155. The proportions in the other districts are, according to their position on the list, (1) 1 to 92; (2) 1 to 73; (3) 1 to 68; (5) 1 to 83.

The borough districts require somewhat more elaborate treatment. The differences between the various classes of towns are wider, and their characteristics are more strongly defined. Hence to derive any practical information of importance from Mr Redgrave's statistics, we must divide the towns according to the prevailing pursuits of its inhabitants, and observe the results which their aggregate returns afford. Of course it will be impossible to arrange the whole 174 towns, which possess a police force, under any number of heads, however numerous. We must determine the number of divisions we propose to make, and then group around them the more important boroughs of each class. Eight divisions will almost prove an exhaustive arrangement of the various classes of English towns and cities; and a total of fifty-five boroughs, divided between these eight different classes, will supply data sufficient from which to obtain such practical conclusions as the results supply. The eight divisions Mr Redgrave classifies as follows :—

(1). The Metropolis.
(2). Pleasure towns.
(3). Commercial ports.
(4). Towns dependent on agricultural districts.
(5). Seats of cotton and linen manufacture.
(6). Seats of woollen and worsted manufacture.
(7). Seats of small and mixed textile manufacture.
(8). Seats of the hardware manufacture.

The towns included under this classification—and the statistics of crime they afford—will appear from the following table :—

State of Criminality in Large Towns.	Population.	Proportion of known Criminals to population.		Numbers of known Criminal Class.	Proportion of Persons proceeded against to population		Numbers of Persons proceeded against.
		1 In every			1 In every		
Total of the 173 Towns in England and Wales in which Police Establishments exist (excluding the Metropolis	4,496,413	103		43,621	21		218,057
The Metropolis (including the City)	2,545,650	178		14,291	23		108,931
Pleasure Towns :—Brighton, Bath, Dover, Leamington, Gravesend, Scarborough, Ramsgate	197,960	94		2,085	48		4,111
Commercial Ports :—Liverpool, Bristol, Newcastle-on-Tyne, Hull, Sunderland, Southampton, Swansea, Yarmouth, Tynemouth, South Shields	905,820	93		9,674	29		31,253
Towns dependent on Agricultural Districts :—Ipswich, Exeter, Reading, Shrewsbury, Lincoln, Winchester, Hereford, Bridgewater	160,557	78		2,056	48		3,337
Seats of Cotton and Linen Manufacture :—Manchester, Preston, Salford, Bolton, Stockport, Oldham, Blackburn, Wigan, Staleybridge, Ashton-under-Lyne	758,183	154		4,910	29		26,284
Seats of the Woollen and Worsted Manufacture :—Leeds, Bradford, Halifax, Rochdale, Huddersfield, Kiddermiuster	380,860	175		2,168	48		7,807
Seats of the small and mixed Textile Manufactures :—Norwich, Nottingham, Derby, Macclesfield, Coventry, Newcastle-under-Lyne, Congleton	263,984	113		2,329	49		5,313
Seats of the Hardware Manufacture :—Birmingham, Sheffield, Wolverhampton	418,140	47		8,729	41		10,224

The Metropolitan district, as containing a population distinct from all others, is placed in the above table in a class by itself. The averages for the other 173 borough police towns are (1) for the proportion of the criminal classes to the population 1 to 103, (2) for the proportion of persons proceeded against to population 1 to 21. Hence we find—

I. With regard to the recognised criminal classes,

That the chief seats of the hardware manufacture, with a proportion of 1 to 47; the towns dependent on agricultural districts, with 1 to 78; the commercial ports, with 1 to 93; the pleasure towns, with 1 to 94; are above the average for the boroughs of England and Wales: and

That the following classes are below the average: the seats of small textile factories, with a proportion of 1 to 113; of cotton and linen, with 1 to 154; of woollen and worsted, with 1 to 175; and the Metropolis with a proportion of 1 to 178.

II. With regard to the proportionate numbers of persons proceeded against,

The different classes arrange themselves according to the following scale :—(1) London proceeds against 1 person in every 23; (2) the commercial ports and the seats of cotton manufacture against 1 in 29; (3) the seats of hardware factories against 1 in 41; (4) pleasure towns, agricultural towns, and seats of woollen manufacture, against 1 in 48; (5) and seats of textile manufacture against 1 in 49.

It is impossible to form any definite idea of the extent of crime in the large towns from a consideration only of the results of any single class, however well arranged. Taken town by town, the figures of the returns become more well defined than in the aggregate;—and hence may be more completely realised by those who study them. With a view to supply this want, a table has been prepared, in which three towns from each of the seven more important districts has been selected, that the results may be seen, individually, at a glance :—

Towns.	Population about	No. of the Police.	No of known Criminals.	The Houses they frequent.	No. of known Indictable Crimes committed.	No. of Persons proceeded against for		
						Indictable Offences.	Summary Offences.	Total.
II. Pleasure Towns.								
Leamington	15,600	21	118	38	75	54	255	309
Scarborough	13,000	18	385	49	28	11	326	337
Ramsgate	11,400	15	116	27	11	8	173	181
III. Commercial Ports.								
Liverpool	374,400	973	3,330	1477	5,012	2,968	30,740	33,708
Bristol	138,000	302	978	377	953	269	4,165	4,434
Hull	82,600	122	963	403	180	184	2,892	3,076
IV. Towns Dependent on Agricultural Districts.								
Ipswich	32,700	34	285	67	380	110	812	922
Exeter	32,800	27	544	63	87	65	273	338
Shrewsbury	19,600	23	140	38	19	19	535	554
V. Seats of Cotton and Linen Manufacture.								
Manchester	303,300	605	2,619	941	6,591	1,749	8,951	10,700
Preston	69,500	42	454	109	599	277	1,984	2,261
Salford	87,500	95	415	146	1,017	200	1,771	1,971
VI Seats of Woollen and Worsted Manufacture.								
Leeds	172,200	221	1,161	415	1,053	686	3,431	4,117
Bradford	103,700	116	386	97	104	110	1,018	1,128
Halifax	33,500	35	154	60	62	50	521	571
VII. Seats of the Small and Mixed Textile.								
Nottingham	57,400	85	426	137	291	147	977	1,124
Macclesfield	39,000	20	146	43	127	91	404	495
Coventry	36,200	35	390	43	20	25	877	902
VIII. Seats of the Hardware Manufacture.								
Birmingham	232,800	378	6,415	844	2,659	1,044	3,285	4,329
Sheffield	135,300	180	778	148	453	283	4,121	4,404
Wolverhampton	49,900	62	1,536	208	638	178	2,312	2,491

In order to make similar returns to those which go before for the county districts apart from the boroughs, and for the towns distinct from the rural population, it only remains to give an abstract of two tables which it is needless to produce in detail. These tables show comparatively what has been stated in the case of the 41 police districts of England and Wales, the proportions, namely, to the respective populations, of the police force, of the number of known criminals, and of the number of persons proceeded against judicially :—

	No. of the Police.	No. of known Criminals.	No. of Persons proceeded against
41 Police Districts, Town and County, in England and Wales	1 in 888	1 in 137	1 in 41
40 County Police Districts	— 1,375	— 144	— 102
174 Town Police Districts	— 576	— 119	— 21

This portion of the subject may be concluded with a summary of those tables which record the extent of crime in the aggregate, in the various districts of England and Wales.

I. Of crime according to sex, in which case round numbers will be used :—

	No. of the known Criminal Classes.		No. of Persons proceeded against for Indictable Offences		Summary Offences.		Total.	
	Male.	Female.	Male.	Female	Male.	Female.	Male.	Female.
40 County Districts	55,600	20,000	10,000	2,000	77,600	18,000	87,600	20,000
174 Town Districts	26,000	33,000	12,000	6,000	242,000	66,000	254,200	72,000
41 Town & County	81,600	53,000	22,000	8,000	319,800	84,000	342,000	92,000

II. Of crime independent of sex; and here definite numbers will be employed :—

Police Districts.	Population.	No. of the Police Establishment.	No. of the Criminal Class, as far as known to the Police, and the Houses they frequent.		No. of known Indictable Crimes committed.	No of Persons proceeded against for-		
			Persons	Houses		Indictable Offences.	Summary Offences.	Total.
40 County Police Districts	10948406	7962	76010	9901	17575	11904	95600	107504
174 Borough Police Districts	7042063	12294	58912	15219	40293	18554	308434	326988
Total of Police Districts, Town and County	17927609	20256	134922	25120	57868	30458	404034	434492

INQUIRER.

[TO BE CONTINUED.]

Agriculture.

LANDLORDS AND TENANTS.

THEIR DUTIES AND INTERESTS.

THE frequency with which discussions on the modern relation of landlord and tenant occur in all our agricultural districts is a healthy and hopeful sign of the times, for it is a subject at present very imperfectly apprehended. Even the best men amongst English agriculturists omit to take up the right position when dealing with this subject. They do not completely emancipate themselves from the semi-feudal notions which so largely infect the contracts and pervert the arrangements made between the owners and occupiers of farms in England. Farmers are too much treated as dependents,—their true position, that of capitalists, being in a great measure lost sight of by those who regard, however liberally, the relation of landlord and tenant from the landlord's aspect.

We find, in an address recently delivered by Mr John Grey, at the Hexham Farmers' Club, a trace of such shortcoming. Now, Mr Grey is theoretically and practically one of the most liberal managers of landed property of the present day. No one has disclosed sounder economical views in reference to agricultural property, and, therefore, if we find some questionable propositions in his lecture on "the reciprocal duties of landlords and tenants," we may be certain that less advanced managers of estates fall far more short in judging of the exigencies of modern English agriculture. He pointed out that the area of cultivation in this country is circumscribed, that we have no unreclaimed forests and prairies to fall back upon, and, therefore, that it is necessary, by the application of greater skill and intelligence, and by industry and energy, to make the area we possess more productive. The relations of landlord and tenant, "and the reciprocal duties which belong to them," have a most important bearing on the productiveness of land. He referred to the various modes of letting land which prevail in England, mentioning in particular annual tenures and tenures by leases. The latter he had "always thought most conducive to agricultural improvement, the spirited exercise of agriculture, and the outlay of capital," as the tenant then knows, when he lays out his money, for how long a period he has a right to hold the land. All this is quite correct. But in the following passage Mr Grey stated some very questionable propositions. He said:—"Very much has been said and written of late in recommendation of letting land with free open covenants, leaving the tenant without restriction to do and act as he chooses. There is some foundation for such an opinion, because everybody believes that the highest state of cultivation, that the most improved mode of farming, is most productive to the tenant; then in leaving a tenant at liberty to farm as he likes, *if he knows that the higher the farming the better for himself*, he is sure to farm in that way, and that must be also conducive to the good of the landlord." Thus, from the landlord's point of view, Mr Grey admits that the best plan is to leave the tenant of a farm unencumbered with restrictions, provided he knows his own interest. And why should there be any more doubt of the farmer's knowledge of his own interest than that of the merchant or manufacturer? It is the landlord's fault if he lets his farm to a tenant who is without sufficient capital to farm the land in the mode confessedly most conducive to his own interest as well as that of his landlord, and there are always enough of men of capital ready to take a farm if they can secure such tenure and facilities for good cultivation as they know to be indispensable to success. But, having admitted the principle of freedom, Mr Grey suggests the following as his reasons for not adhering to it. He said:—"But in farming, as in other branches, there are men who fail to do that which is most conducive to their own interests—men who fail sometimes from ignorance and want of judgment—some, unluckily, from want of sufficient capital—many because they are by nature and in their hearts penny-wise and pound-foolish, and will not extend with that liberality they ought to do the benefits of their cultivation, which might make them a good return." Now, just consider how any restrictions or cropping regulations can make such farmers as are indicated in the last passage farm well, or even prevent them from deteriorating the farm? Ignorance, want of capital, or such a niggardly disposition as prevents a farmer from expending capital, if he has it, in the proper cultivation of his land, is each a very good reason for refusing to accept as a tenant the man who is obnoxious to any of such objections, and would entirely justify a landlord in getting rid of him as soon as possible. But why are competent and skilful tenant-farmers to be subjected to restrictions, admitted to be unsound in principle, because the landlord or his agent wants the requisite vigilance or discrimination to select, or to attract tenants of enterprise and capital? But the truth is, that no amount of restriction on the freedom of the tenant's action, and no conceivable code of cropping regulations, can make a bad farmer, or a farmer who is without sufficient capital, farm well. There may be no breach of the prescribed rotations,—there may in form be an observance of every condition, and yet the farm may deteriorate in condition from year to year. Such in practice is the case on estates where the system of restriction and regulation is most rigidly in force.

But then, according to Mr Grey, a farmer once good may go wrong in his pecuniary affairs from causes irrespective of farming. Where a farm has been let on a 19 or 21 years' lease, says Mr Grey, the landlord "may make the very best selection possible of a tenant; he may find a man in whom he has the greatest confidence, both for judgment and integrity; but who can tell where this excellent tenant may be at the end of this year, and who may succeed him? Many a respectable man has a profligate son, and leases are heritable property, and at the death of the tenant the farm may go into the hands of those who know nothing of its management. It is, therefore, reasonable in such a case that the landlord's property should go into the hands of a person who is capable of managing it, and that he should have means of restricting such a person in mismanaging and spoiling his property; and these restrictions are more essentially necessary when the term comes near to an end." Now much of this is far-fetched and imaginary. Of course every fair and rational lease will contain provision for recovery of the property by the landlord, in case the original tenant, or any one on whom the lease may devolve, shall "spoil" the farm. That, however, is quite a distinct question, and has nothing to do with cropping regulations. So the stipulating for a certain rotation during the last few years of a lease is altogether another matter, and is a reasonable and prudent provision for affording the next tenant the opportunity of growing in due course the ordinary crops. However highly land may have been farmed by the outgoing tenant, it would obviously be inconvenient to his successor to find no fallowed land, none coming in course for wheat and the like; hence no one objects to a defined plan of cropping for the last four years of a lease.

Literature.

THE QUARTERLY REVIEW. January.

THE new number of the "Quarterly" contains no article of striking ability, though it is throughout readable and instructive. "The Australian Colonies and the Gold Supply" is historical rather than politico-economical: the writer takes a favourable view of the condition and prospects of that portion of the British Empire. The following are given as the latest "gold statistics:"—

The gold produce of Victoria is exhibited in the following table, compiled from official returns:—

Year.	Quantity. oz	Value. £
1851	145,137	438,777
1852	1,998,526	6,135,728
1853	2,497,723	8,644,529
1854	2,144,699	8,255,550
1855	2,751,535	10,904,150
1856	2,985,991	11,943,458
1857	2,762,460	10,987,591
1858 to 30th June	1,279,767	5,119,069
Total	16,565,838	62,428,852

The estimated net quantity and value of gold exported from the two colonies of Victoria and New South Wales from May, 1851, to 31st December, 1857, is as follows:—

Quantity. oz	dwts	Value. £
17,023,413	14	64,122,360

To show the change that has taken place in the method of mining from the first rude process to the present scientific system, we give, from official returns, the statistics of the machinery employed in the gold-fields in the month of May, 1859; viz., 282 steam-engines, 4,256 puddling machines, 135 quartz-crushing machines, 906 toms, sluices and dams, 508 whims and whips, 66 horse machines, 200 water-wheels, 13 boring machines, 1 smelting machine. We may add, that so great has the produce of the quartz reefs become that it is estimated that 60 per cent. of the gold brought from the Bendigo district alone, one of the oldest and most celebrated of the gold-fields, is at present obtained from quartz taken from considerable depths.

"Cotton Spinning Machines and their Inventors" is a paper of much the same character as the preceding. "China and the War" recommends vigorous measures to enforce the Treaty of Tien-tsin in its full integrity, and for this purpose advises the capture of Pekin as soon as we have made sufficient preparations to enable us to hold it until all our demands are granted.

The next article supplies us with the latest antiquarian gossip on the origin and purposes of the "Roman Wall" across the island. "Religious Revivals" are looked upon as a very beneficial movement, accompanied in its early stages by much extravagance and delusion, but now tolerably freed from these, and acquiring a substantial and sober certainty of "good fruits." There is a characteristic literary paper on the "Life and Works of Cowper," pleasantly and tranquilly written, but biographical more than critical,—not going very deeply into matters, but sound and healthy as far as it goes. The last article in the number is (of its class) the poorest. It is intended as a sequel to a previous one on the "Reform Question," but the writer, though not very objectionable in his general views, scarcely attempts to grasp the real difficulties of the question, and contributes nothing of importance towards its

solution. He advocates a county franchise extended to "every householder who is rated or assessed to the poor-rate or to the inhabited house duty on a value of not less than 20*l*"; and a borough franchise extended to "every occupier in a borough assessed at a sum exceeding 6*l* a year.

THE HISTORY OF THE COMMERCIAL CRISIS 1857-58, AND THE STOCK EXCHANGE PANIC 1859. By D. MORIER EVANS. Groombridge and Sons.

We can imagine few subjects more interesting to commercial readers than those of which this book treats. To sketch the causes and course of the several panics to which the commercial world has periodically been subjected,—to expose, with a view to their future avoidance, the abuses and excesses by which the collapse has been occasioned, is to render a service to the community. A period of two or three years seems to be sufficient to efface the recollection of disasters of this character, and to enable speculation again to raise its head. It is well that the record of former embarrassment should be compressed into a manual ever at hand to inculcate a warning. All this has been fairly done by the author. The volume, though rather overloaded with matter susceptible of condensation, has its utility for purposes of reference. A complete record of the failures during so long a period in the United Kingdom, together with those witnessed during the crisis of 1857 in Hamburg and the United States, ought to be of service to commercial men.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

As you will have already learned, a treaty of commerce between England and France was signed in this city on Monday, by Lord Cowley and Mr Cobden for the former country, and by M. Baroche, *ad interim* Minister of Foreign Affairs, and M. Rouher, Minister of Commerce, for the latter. By this treaty, as I am informed, England makes *at once* to France large and liberal reductions of the import duties on wines, brandies, and other articles, and abolishes altogether those on silk; whilst France at *future periods* reduces the duties on English coal, coke, iron, and machinery, and abolishes all prohibitions, replacing the latter by protective duties not exceeding 30 per cent. *ad valorem* for five years, and not exceeding 25 per cent. afterwards. The task of fixing the precise duty to be paid on different articles within these limits is, I am informed, to be confided to a Commission composed partly of Frenchmen and partly of Englishmen; and the Commission will also have to decide whether the value taken as the basis of the duty shall be that in England or that in France,—in other words, whether the cost of transport and the incidental expenses shall, or shall not, be added to the original value. As the treaty stands, England undoubtedly does not obtain an adequate return for the great concessions she makes:—her reduction on the wine duties alone is, for example, to be (as is said here) more than *six-fold*; but France only makes a real concession to her in coal, the duty on which is to be reduced to the same rate as that of Belgium; whilst iron is to pay very nearly 3*l* a ton, and the 30 per cent. duty on prohibited articles will be virtually prohibitive. The difference in the dates, too, of her concessions and those of France is not without importance. Doubtless, however, the English Minister and Mr Cobden, who negotiated the treaty, thought it a grand point to get France to make concessions at all, and deemed it right to be pliant, in consideration of the great difficulties which the French Emperor has to contend against in effecting tariff reforms.

I find in a Government journal of this morning the following detail of the measures which the treaty with England will necessitate in France, and of the dates at which they will come into operation (coffee, however, is not mentioned, though it is to be reduced as well as sugar):—

July 1, 1860.—Suppression of the import duties on cotton and wool.

Ditto.—Belgian tariff applied to English coal and coke.

October 1, 1860.—Duty of 7f the 100 kilogs substituted for the present duties on iron.

December 31, 1860.—Diminution of the duties on the importation of machinery.

January 1, 1861.—Diminution of the duties on sugar.

June 1, 1861.—Removal of the prohibition on hemp threads and fabrics, and the adoption of duties not exceeding 30 per cent.

October 1, 1861.—Removal of all other prohibitions.

I have said that Mr Cobden signed the treaty on behalf of England. The honour of doing so was well earned by the great commercial reformer; and all will rejoice that the English Government had the good taste to confer that honour on him. But France also has her great commercial reformer, who has had far mightier odds to struggle against than Mr Cobden had, and who has been at work for far more weary years than he was:—I mean, of course, M Michel Chevalier. Regret is felt that the French Emperor had not the tact of allowing this distinguished personage to inscribe his name to the treaty by the side of that of his English *confrère*. The treaty, however, and the commercial reforms it inaugurates, are really his work; and, in addition to the glory of accomplishing so great a thing, he will have the satisfaction (of which Sir Robert Peel for his part was so proud) of knowing that he has secured plenty and comfort to millions of lowly households.

It is needless to say that the Prohibitionist and Protectionist fraternities are literally wild with rage at the coming reforms. Upwards of 400 of them have flocked to Paris, to complain, remonstrate, and threaten; but only very few of them have been able to obtain access to the Emperor, or even to the Minister of Commerce, and their eloquence has produced not the slightest effect on either. A considerable number of them, claiming to represent the great manufacturing towns of Lille, Amiens, Rouen, Elbeuf, Evreux, Saint Quentin, Mulhouse, Albeville, &c., have sent an address to the Emperor, in which, in terms anything but respectful, they accuse his Government, and consequently he himself, of having violated a pledge given in the spring of last year (on the outbreak of the Italian war), that the prohibitions should not be repealed without a previous inquiry (*enquête*). They also accuse the Emperor of having virtually violated the constitution, inasmuch as, though by it he has power of his own authority to conclude commercial treaties without the intervention of the Legislative Body, that power was never meant to extend so far as to enable him to destroy completely the economic system of France. In addition to what they are doing at Paris, these Protectionist gentry are, it appears, making great efforts in different towns to create agitation among the working-men. The Government, however, I am happy to say, appears disposed to treat their remonstrances and clamours with indifference; and, in the event of their getting up disturbances, to punish them severely.

Whilst the Prohibitionists are thus raving, Marseilles, Nantes, Montpellier, and numerous other towns interested in the shipping and wine trades are manifesting great joy at the approaching changes, and are expressing thanks to the Emperor in addresses. One fact deserves special mention, and that is that Calais, though largely engaged in the tulle manufacture, has, in an address to the Emperor, declared its approval of the abolition of prohibition.

The long-expected annual report of M. Magne, the Minister of Finances, on the state of the finances, has at last appeared; but the public are so absorbed by the projected commercial reforms that little attention has been paid to it. It, of course, represents the financial situation as quite *couleur de rose*. Thus, it says that the accumulated deficits of old budgets have been reduced from 886,000,000f to 660,000,000f; that the budgets of 1855, 1856, and 1857, have been closed without deficits; that the budget of 1858 presents a surplus of 12,000,000f (480,000*l*), notwithstanding the war with China and the expences of public works; that the floating debt, which at one time threatened to exceed 1,000,000,000f (40,000,000*l*), has been reduced to 750,000,000f, and is likely to be reduced to 700,000,000f; and that the amount of Treasury bills in circulation has fallen from 345,000,000f in 1858, to 135,000,000f, and the rate of interest on them from 4 to 2½ per cent. The report notices, too, as indications of prosperity, the large increase in the investments of *rente* made, through the Government officials, by people in the provinces; the large increase in commerce,—about *eighty per cent.* in seven years; and the addition to the metallic circulation. All this is very well as far it goes; but it by no means presents a fair idea of the real state of things. It is as if a merchant were to estimate his position by his incomings, without taking any account whatsoever of his outgoings. Thus M. Magne altogether omits to notice the prodigious increase in the annual expenditure which the last two years have witnessed; and,—a matter to which the ECONOMIST has more than once drawn attention,—the really alarming additions that have been made to the public debt. As regards the last item alone, M. J. E. Horn in his *Annuaire du Credit Public*, shows that whilst on the 1st January, 1855, the nominal capital of the 3, 4, and 4½ per Cent. *rentes* was 6,082,877,852f, it was 8,422,096,778f on the 1st January, 1858,—an increase of more than 80,000,000*l* sterling; and since then another 20,000,000*l* sterling have been added to it.

The Bourse, influenced by political anxieties, has not given a favourable reception to the projected commercial reforms; and the knowledge that the Government wishes to reduce the tariffs of goods on railways has exercised a certain effect on railways. The quotations are as follow:—

Subjoined is an an account of the markets:—

FLOUR.—The market has again been somewhat dull at *Paris* during the past week. Yesterday the quotations varied from 51f to 56f for the sack of 159 kilogs (sack included), according to quality; and the four marks were at 55f 50c for the current month and for February; 56f 50c for March and April.

WHEAT.—Yesterday, at *Paris*, the market was not active, and prices fell. First qualities were at 31f the sack of 120 kilogs; good at 30f; secondary sorts at 29f to 29f 50c. In 24 provincial markets there has been a rise of 6c to 1f the hectolitre; in 44 a fall of from 10c to 1f; and in 53 there was no variation.

COTTON.—At *Havre*, in the week ending Friday, the total sales were 13,711 bales. The closing quotations of the "low" sorts were 1f below those of the preceding week, but other descriptions remained unchanged. Low New Orleans was, consequently, at 100f the 50 kilogs; very ordinary ditto, 106f. The arrivals were 43,836 bales. This week the market has been dull, and yesterday low New Orleans was at 99f to 100f.

COFFEE.—At *Havre*, in the beginning of the week ending Friday, business was active, but in the last three days it was somewhat dull. 100 sacks Hayti went at 75f the 50 kilogs in bond; 7,350 sacks Port-au-Prince, 73f to 74f 50c; 100 sacks Gonaives, 76f; 1,920 sacks Rio, not washed, 71f 50c to 72f 50c; 380 sacks Rio, washed, 80f; 75 sacks Santos, 73f to 74f; 3,000 sacks Ceylon, not triage, 124f 50c in bond; 200 sacks ditto, triage, 128f; 1,350 sacks ditto, triage, 127f; 1,800 sacks Manilla, 130f. The arrivals of the week were about 6,000 sacks. This week there have been numerous sales: Hayti, 74f; Rio, 72f 50c; ditto, washed, 84f to 86f; Padang, 134f to 135f, duty paid. At *Marseilles*, last week, there were some large sales of Brazil, the greater part at 75f to 76f, and some lots at 73f to 78f; some Guayra also went at 82f. At *Bordeaux*, last week, the principal transaction was 1,065 sacks Java, at 137f to 142f the 50 kilogs duty paid; and 300 at prices not stated. This week business has been calm, and the only transactions recorded are some lots of Salem at 251f to 263f the 100 kilogs; and some of Mysore at 250f to 261f the 100 kilogs. At *Nantes*, last week, two lots of very fine Reunion went at 155f; a small lot of Manilla at 135f; and a small lot of Java at 139f. Nothing has been done this week.

SUGAR.—At *Havre*, in the week ending Friday, about 800 casks French West India were sold at 59f 50c and 60f the 50 kilogs duty paid; a small quantity of Havana at 37f in bond. The arrivals of the week were 1,400 casks and about 1,000 sacks. This week business has not been active: French West India has been at 59f 25c to 60f duty paid; Mauritius, 65f 50c; and Pernambuco at 33f in bond. At *Marseilles*, last week, a large lot of Reunion went at 61f to 62f, and 8,000 bales Mauritius at prices not stated. At *Bordeaux*, last week, little was done, and quotations were—French West India, 59f; Reunion, 61f and 62; Mauritius, 70f to 72f. There has been no demand this week. At *Nantes*, last week, some large sales of Reunion of inferior quality were made at 66f to 67f. This week, also, there have been large sales of Reunion and Mauritius, both at 61f 50c.

INDIGO.—At *Havre*, last week, 34 cases Bengal sold at 45c to 50c above the estimates. The arrivals were only 4 cases from England. This week some lots have been sold at 10f 70c and 11f the half-kilog. At *Bordeaux*, last week, 54 cases Bengal and upwards of 200 of other sorts were sold at prices previously established. This week there have been sales, but the prices are not given.

HIDES.—The demand at *Havre*, last week, was animated: 9,020 dry La Plata went at 148f to 161f 25c the 50 kilogs duty paid; 655 Buenos Ayres, salted, 75f; 3,800 Entre Rios, salted, 85f; 480 Rio Grande, salted, 82f 50c; 1,072 Maracaibo, dry, 120f; 1,735 Tampico, dry, 125f; 195 Arica, dry, 135f; 1,500 New York, salted, 62f 50c. The arrivals exceeded 12,000. This week, little business has been done: Rio Grande, salted, at 82f 50c duty paid; Monte Video, salted, 85f duty paid; Arica, 107f 50c duty paid; Rio Janeiro, salted, 69f.

WOOL.—The sales of the last week, at *Havre*, were—14 bales Buenos Ayres, at 1f 10c the kilog in bond; 82 bales Portugal, 1f 95c; 74 bales mutton skin La Plata, unwashed, 95c to 1f 60c; 29 bales Monte Video, washed, 1f 15c to 1f 47½c. The arrivals were only 9 bales. This week, Buenos Ayres, unwashed, has been at 1f 20c to 2f 25c.

TALLOW.—At *Havre*, last week, no transactions took place, and there were no arrivals. The same remark applies to this week. At *Paris*, yesterday, the 100 kilogs were 132f 70c within the walls, and outside 125f 50c—a fall of 75c on last week's quotations.

SPIRITS.—At Paris, yesterday, 3-6 of 90 degs., first quality, was 89f the hectolitre; Montpellier, 128f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f, and beetroot 95f.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Jan. 10.—Flour heavier and lower, with a little more doing, partly for export, but closed quiet, with no choice; extra flour to be had below 5.35 dols; Southern dull and easier, being 5.50 dols to 6.50 dols for common to choice extra. Cornmeal quiet, and unchanged. Wheat easier, and more active, with a little doing for export; red State, 1.25 dol; prime white Canada, 1.42 dol; choice Milwaukie club, 1.24 dol; and Chicago spring, 1.20 dol. Rye quiet, at about 22c. Barley quiet, and unchanged. Corn dull, at 82c to 87c for new white and yellow, and 83c in our dock for new mixed Western.

NEW YORK, Jan. 14.—Flour less buoyant; price unchanged. Wheat, fair demand. Corn firm. Rye quiet. Oats active and firm. Freights unchanged.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

About average supplies of English wheat have been on sale in most of the leading markets held this week; but the general condition of the samples has proved very inferior. Good and fine qualities have changed hands steadily at full quotations; but low and damp parcels have commanded very little attention. Importers of foreign wheat have continued very firm in their demands; but the amount of business done in that article has not increased. On the whole, the barley trade has ruled somewhat active at late quotations. Malt, however, has met a dull inquiry. The oat trade has continued firm, and a steady business has been done in beans, peas, and flour at full currencies.

Messrs Stolterfoht and Sons, of Liverpool, have issued the following statement, showing the stocks of foreign wheat, flour, and Indian corn in warehouse in England, compared with the corresponding period in 1859:—

	Wheat. qrs	Flour. brls	Indian Corn. sacks	Indian Corn. qrs
1860.				
London	308,000	20,000	23,000	6,000
Liverpool	287,000	116,000	108,000	185,000
Eight other ports	619,000	43,000	26,000	251,000
	1,214,000	179,000	157,000	442,000
1859.				
London	230,000	21,000	12,000	32,000
Liverpool	235,000	200,000	41,000	150,000
Eight other ports	334,000	70,000	22,000	250,000
	799,000	291,000	75,000	423,000

Most of the foreign markets have been firm for all kinds of produce. In the United States, prices continue to be supported.

In Scotland, there has been a fair demand for wheat, barley, and oats of fine quality; but most other articles have met a dull sale.

The Irish markets have ruled somewhat heavy; nevertheless we have very little change to notice in prices.

The show of English wheat in to-day's market was limited. Fine dry samples sold at full prices, but other kinds were very dull. In foreign wheat, only a limited business was passing. Fine barley was firm; but all other produce was a dull inquiry.

Mr Ed. Rainford states that only 4 vessels have arrived off coast laden with grain since the 17th inst. and that very little business has been passing in cargoes afloat.

The London averages announced this day were:—

	qrs	s	d
Wheat	5194	at 44	1
Barley	2093	35	4
Oats	1149	22	1
Beans	527	34	9
Peas	453	34	8

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 25th day of January, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,342,620	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,867,620
		Silver Bullion	...
	29,342,620		29,342,620

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,411,403
Rest	3,295,135	Other Securities	19,499,757
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5,529,728	Notes	7,715,740
		Gold and Silver Coin	691,476
Other Deposits	14,079,747		
Seven Day and other Bills	860,766		
	38,318,376		38,318,376

Dated the 26th January, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,437,646	Securities	29,833,160
Public Deposits	5,529,728	Coin and Bullion	15,559,696
Private Deposits	14,079,747		
	42,097,121		45 392,256

The balance of Assets above Liabilities being 3,295,135*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£424,841
An INCREASE of Public Deposits of	363,469
A DECREASE of Other Deposits of	771,007
A DECREASE of Government Securities of	402,419
A DECREASE of Other Securities of	93,907
A DECREASE of Bullion of	325,402
An INCREASE of Rest of	10,651
An INCREASE of Reserve of	100,858

The effect of the heavy draughts upon the other deposits has been counteracted by the increase in the Treasury deposits, and by the decrease in the Government securities (resulting from sales of stock); and the reserve has consequently experienced a slight increase. The decline in the bullion has become more rapid since this return was made up.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850 :—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,877,135	£ 19,939 801	£ 20,530,197	£ 21,578,155	£ 22,487,646
Public deposits	5,499,042	4,122,921	3,248,893	6,520,053	5,529,728

Average price of wheat	40s 1d	58s 10d	48s 9d	41s 9d	43s 11d
Exchange on Paris (shrt)	25 45	25 17½ 25	25 15 22	25 7½ 12½	25 2½ 70
— Amsterdam ditto	12	11 13½ 14	11 14 15	11 14⅛ 15½	11 12⅛ 13⅛
— Hamburg (3months)	13 11½	13 6	13 6½	13 6 6½	13 4¼ 4¼

At the corresponding period of the year 1850, it had become more apparent than ever that the preservation of a semblance of harmony between the President of the French Republic and the National Assembly was almost solely due to the general dread of socialism. Questions as to the manner of dealing with the residue of the 15,000 Red Republican prisoners of June, 1848, continued to engage discussion in the Assembly. In Russia, a great conspiracy against the Emperor had been discovered. In Hungary, courts-martial were still in permanent session. At home, a great deal of Protectionist agitation was still going on. The applications for Messrs Barings' Russian 4½ per Cent. loan of 5,500,000*l* at 93 had amounted, notwith-standing Mr Cobden's denunciations, to 30,000,000*l*, the scrip being quoted 3½ premium.

In 1857, Bushire had been captured by the British fleet, and the Shah of Persia had accepted terms of peace, but the sanguinary conflict at Canton continued, Governor Yeh obdurately refusing to submit. A Spanish loan of 3,240,000*l*, attempted through M. Mirès, had failed. The money market was tight, owing partly to the drain of gold to pay for silver on the Continent; and in order to provide the means of moving large masses of bullion to and fro, the high rate of 6½ per cent. was being paid to the Bank for loans on Government securities.

In 1858, the rhodomontade of the French colonels attracted attention. The French Government was threatening Belgium, *à apropos* of the comments of the Belgian press. The Bank of England rate of discount had been reduced from 5 to 4 per cent., the reserve having again increased 1,320,000*l*, and the bullion nearly a million, within the last week. An Indian loan was looked for.

In 1859, the meeting of Parliament, fixed for the following Thursday, was looked forward to with impatience as likely to relieve the injurious and painful suspense under which the commercial world laboured with regard to the tendency of Continental politics,—a suspense rendered all the more acute by the occasional appearance of ambiguous paragraphs in the Paris *Moniteur*. At a recent interview with the Directors of the National Bank, the Emperor of Austria had expressed his confidence that the pending difficulties with France would soon be adjusted. Money was very cheap. The Bank bullion was 3,618,758*l*, and the reserve 4,534,853*l*, larger than now.

It will be observed that Consols are now quoted 1⅝ per cent. lower than in 1850, when the Bank rate of discount was 2½ per cent., only 1⅛ per cent. higher than in 1857, when the rate was 6 per cent., ⅝ per cent. lower than in 1858, when the rate was 4 per cent., and 1⅛ per cent. lower than in 1859, when the rate was 2½ per cent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 1,922,481*l*; in 1857, a deficiency of 5,844,149*l*; in 1858, a deficiency of 2,871,822*l*; and in 1859, a deficiency of 1,558,316*l*. In 1860, the deficiency is 5,420,010*l*.

The drain of bullion this week has increased, and now attracts great attention. There is, as yet, no recovery in the American exchange, and, consequently, no prospect of immediate relief from that quarter, although it is not improbable that, as the money market here tightens, a certain bias in our favour may be given to the exchange. Meanwhile, the receipts from other quarters continue to bear a very small proportion to the demand; and large amounts of gold have, therefore, been taken every day this week from the Bank. The amount withdrawn yesterday was 150,000*l*, and to-day 136,000*l*, making a total of 286,000*l* since the date of the return given above. The demand is still chiefly to pay for silver purchased on the Continent for exportation to the East, against supplies of Government rupee paper transmitted to this side. It will be perceived, by the table given above, that the Continental exchanges are now at a more unfavourable level than at the corresponding period of any of the four antecedent years cited. This circumstance helps to explain the active out-flow of gold now witnessed. There was an impression in many quarters that the Bank of England would yesterday have raised their rate of discount from 3 to 3½ per cent., in order to check the drain of gold. The Directors, however, have preferred to wait another week. They were, doubtless, duly observant of one or two anomalous features now presented by the money market. The most remarkable of these is the very ordinary extent of the demand for money. An active drain of gold is usually accompanied by a certain pressure for money, which now is quite absent. Throughout the week, the best bills have been readily discounted at 3 per cent., and several establishments have taken them at 2¾. At the Bank, too, although the Directors have called in notes by sales of stock, and although other notes are in process of extinction daily as against the gold withdrawn, the demand for discounts has been languid. The Court probably felt that to raise the rate of discount to 3½ per cent. when they were obtaining very little business at 3, would appear absurd. Should the efflux of gold continue, however, a rise to 3½ per cent., if not beyond, is looked for next Thursday. The present quiet state of the market illustrates in a very remarkable manner the general confidence in the stability of our mercantile position.

The demand for money to-day in Lombard street was somewhat brisker than at an earlier period of the week, but there was no alteration in the rates. At the Bank the amount of business was very moderate. The rates for long-dated

bills are naturally rising, now that the future of the money market has become somewhat obscure. Paper of a high class having four months to run is not willingly taken below 3½ per cent., whilst for the best six months' bills 4 per cent. is the *minimum*.

The imports of specie and bullion since the date of our last report (exclusive of the large amount of silver imported from the Continent), have reached only about 153,000*l*. The amount of specie shipped by the steamer Euxine, which leaves Southampton this day, is no less than 455,900*l*, of which 296,680*l* is silver, and 159,220*l* gold. The whole of the silver and 144,650*l* of the gold is for Bombay, and the rest for Alexandria. It will be noticed that the proportion of gold shipped is still increasing. An idea of the magnitude of the drain to the East may be gathered from the fact that the four steamers which have sailed during the present month have taken a total of 1,715,687*l*, being at the rate of upwards of twenty millions per annum.

Three gold ships are known to be still at sea from Melbourne, viz.:—The Sussex (out 84 days), with 71,000*l*; the Donald McKay (out 79 days), with 148,000*l*; and the Commodore Perry (out 72 days), with 58,000*l*.

The Continental exchanges have shown a continued unfavourable tendency. The rates for bills on Hamburg and Paris are quoted worse for this country than last week. The Vienna exchange continues to move in a direction adverse to Austria, having this week experienced a fresh rise of upwards of 3 per cent.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—The Water Nymph, with 136,000*l* in gold, has arrived from Melbourne: this has been purchased for exportation, and as the demand still continues, a large amount has been taken from the Bank; the total withdrawn since the 19th instant being 409,000*l*. Of this sum, 144,650*l*, in fine bars and coin, has been shipped for Bombay, by the steamer of the 27th instant. The gold brought by the Atrato has also been sent away.

Silver.—The bar silver brought by the Atrato has been sold at 62⅝d per oz standard, at which price a large amount has been purchased for the Bombay mail (27th instant); the total of silver sent by this steamer being 296,680*l*. The arrivals from the Continent during the week have been very large, but without influencing the price, which, for the next mail to Calcutta and China (4th February), we quote as 62⅝d per oz. The Tagus has brought 4,422*l* from the Peninsula.

Mexican Dollars.—Since our last (19th instant) the price has remained the same, 62⅝d per oz; some small amounts have been purchased for the next mail to China. The supply is rather limited here, and prices are not likely, therefore, to recede for the present. There have been a few arrivals from the United States during the week, amounting to about 145,000 dollars.

Exchange remains as at the date of our last. Bombay and Calcutta, 60 days' sight, 2s 0¼d; Madras, as before, nominal. These high quotations being brought about mainly by the price of silver, any fall in the latter will not unlikely react on them favourably.

India Government Loan Notes continue to receive the attention that has been bestowed on them for some time past; but rates have hardly been maintained at the highest. 5 per Cents. are selling freely at 98⅞ to 99⅛ (1s 11¾d), and 5½ per Cents. at 105⅜ to ⅝ (2s 1 1-16d to 2s 1⅛d.)

Quotations for Bullion.—Gold—Bar gold, 77s 9¾d per oz std; bar gold, fine, 78s per oz std; bar gold refinable, 78s 1d per oz std, last price; South American doubloons, 75s 6d per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2⅝d per oz std; bar silver, containing 5 grs gold, 5s 2¾d per oz std; fine cake silver, 5s 6¾d per oz; Mexican dollars, 5s 2¾d per oz, last price; Spanish dollars (Carolus), 6s to 6s 3d per oz, last price; five-franc pieces, 5s 0½d per oz.

Amid the depression in the Stock Exchange, the Indian rupee paper has formed an almost solitary instance of buoyancy. After rising to 99¼ to ½, the 5 per Cent. closed today at 98¾ to 99, being ⅛ per cent. higher than on last Friday. The 5½ per Cent. has improved ⅜ per cent. during the same period, the closing quotation this afternoon being 105 to ¼. A day or two ago, the quotation reached 105½ to ¾. It remains to be seen what further additional amount these prices will tempt over from India. The Indian markets will doubtless respond to the rise here, and the margin of profit on the transfer ought, therefore, to be proportionately reduced.

The new Canadian 5 per Cent. Loan has shown some heaviness, and the scrip has declined to 2½ to 2¾ prem. The paid-up bonds were quoted this afternoon 100½ to 101. The next instalment, amounting to 8 per cent., falls due on the former on Wednesday next. Many of the holders will probably take that opportunity of paying up in advance, 5 per cent. discount being a great temptation.

It was announced to-day that the dividends on the stocks of the North-Eastern Railway Company, as officially recommended, are as follows:—viz., on Berwick stock, 5¼ per cent. per annum, against 4¾ in 1858; on York and North Midland, 4½ per cent. per annum, against 4 in 1858; and on Leeds, 2¾ per cent. per annum, against 2⅜ in 1858. These rates are in accordance with expectation.

At the meeting of proprietors of the English, Scottish, and Australian Chartered Bank, held on Wednesday, a dividend at the rate of five per cent. per annum, as recommended by the Directors, was declared.

At the meeting of the National Discount Company on Wednesday, the Directors' recommendaton of a dividend at the rate of five per cent. per annum was likewise agreed to.

At the half-yearly meeting of the London Discount Company, held on Monday, a dividend at the rate of five per cent. per annum was declared.

The National Bank have declared a dividend for the last half-year at the highly satisfactory rate of 8 per cent. per annum, with a bonus of 15s per share, free of income tax, being together at the rate of 14 per cent. per annum.

The annual meeting of the North British Australian Company took place on Tuesday, at which the dividend recommended—at the rate of 6¼ per cent.—was agreed to.

The prices for the shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 2⅛ to 2⅜ prem.; Universal Marine Insurance, ⅝ to ¾ prem.; San Paulo (Brazilian) Railway, ¼ to ⅛ dis.; Bank of Turkey, ⅛ dis. to par; Rio de Janeiro Drainage, 1-16 to 3-16 prem.; and City of London Brewery Preference Shares, ¼ to ½ prem. The allotments of shares in the latter undertaking will be distributed to-morrow. Sir James Duke, Bart., M.P., has become the chairman.

The Australian mail has been telegraphed from Aden, and the light portion may arrive in London about the 4th or 6th February. It will, doubtless, report further consignments of gold, the arrival of which, however, cannot be looked for yet.

At Paris, to-day (Friday), the closing quotations of the Bourse were as follows, viz.:—3 per Cent. Rentes, for money, 68.50; ditto, for account, 68.50; ditto 4½ per Cents., 96.75; Bank of France shares, 2,825. The 3 per Cents. are quoted much the same as yesterday, but ⅜ to ½ per cent. lower than on last Friday.

The rise in the value of money has thrown down the funds. A certain effect has also been produced by sales of stock for account of the Bank of England. Consols were quoted at 4 o'clock this afternoon at the lowest point yet touched—viz., 94⅜ to ½ for the 8th February, being ⅝ per cent. worse than on last Friday; but a recovery of ⅛ per cent. was subsequently quoted. The market will probably continue to droop, until the public are tempted to invest. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks has shared in the heaviness of Consols. The sales have been principally for account of speculative holders, and an almost general but moderate reduction has taken place in prices. North British

stock has fallen 1 per cent.; Caledonian, Great Western and South-Eastern, ¾ per cent.; Eastern Counties, Great Northern and Lancashire and Yorkshire, ½ per cent.; and London and South-Western, ¼ per cent. Midland and York and North Midland have advanced ¼ per cent., whilst London and North-Western and Berwick remain steady. A certain influence is naturally exercised in this as in the other departments of the Stock Exchange by the disturbance of the money market. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.07½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 423 per mark, and the short exchange on London is 13.3¼ per 1*l* sterling. Standard gold at the English Mint price is, therefore, rather more than 3-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108⅞ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The show of English wheat at Mark-lane, to-day, was limited, and mostly in inferior condition. Fine dry samples changed hands steadily, at full quotations; but inferior qualities were very dull. There was no movement in the inquiry for foreign wheat. Fine barley commanded extreme rates; all other articles were a dull

sale, at late quotations. The imports from abroad, this week, have amounted to only 2,050 quarters of barley and 3,470 barrels of flour.

At Liverpool, this morning, most kinds of produce were in fair request, at full prices.

A large business has again been transacted in the Liverpool cotton market during the week, the total sales amounting to 83,000 bales, of which the trade have taken 55,000 bales, speculators 16,000 bales, and exporters 12,000 bales. Quotations are partially $\frac{1}{8}$d per lb enhanced since Friday last. Of low cottons there remains an abundance, and they are to be had upon quite as easy terms as hitherto. To-day's sales are 10,000 bales. Market steady at previous rates. In the London market, 1,000 bales have been sold at the full rates of last week.

Messrs Briggs and Co., of Alexandria, writing on the 11th inst., state that cotton was somewhat dearer, owing to short crop estimates. At Bombay, to the 27th Dec., the transactions in the article for export purposes were limited, with few sellers at the then current rates.

We have to report rather an active demand for most kinds of tea, at, in most instances, further enhanced rates. Common sound congou has produced 1s 5d to 1s 5$\frac{1}{2}$d per lb.

There has been much less activity in the inquiry for raw sugar. No actual decline has taken place in prices; but, to have forced sales, lower rates must have been submitted to. Refined goods have moved off slowly, at 51s 6d per cwt for common brown lumps.

Superior qualities of plantation coffee have continued in request at very full prices. Other kinds have maintained their previous value; but the business done has not increased.

For rice, the inquiry has been somewhat restricted, notwithstanding that the stock on hand is very moderate, compared with last year, and prices have shown a tendency to give way.

The saltpetre market has been far from active, at about last week's currency.

Brandy has become somewhat excited, and prices have further advanced. No sellers of Martell's 1858 in hogsheads, are coming forward under 10s 6d; and Hennessey's, 10s 4d per gallon. Rum commands previous rates.

The wool trade has shown some signs of improvement. The public sales now in progress at Liverpool have been well attended, and most of the wool as yet offered has changed hands at full quotations. In the value of hemp and flax, very little change has taken place.

Scotch pig iron has sold at 58s 3d cash. Most other metals have supported previous quotations.

Linseed oil has maintained its previous value. Olive has produced rather more money. In other oils, very little has been passing.

The demand for tallow has somewhat improved, and P.Y.C., on the spot, has produced 59s per cwt. The quotation for delivery during the last three months is 53s per cwt.

COTTON.

NEW YORK, January 10.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

	Sales.	Closing.	Middling.	Freights.	F.o.b.

Total.....		109000 bales		Average	6.01d

There is now an excess in receipts of 377,000 bales over last year, when the crop reached 3,851,000 and of 1,163,000 bales over 1857-8 (crop 3,114,000).

New York Market.—Business at this point has continued in the same dull state we have lately had to report, the transactions being limited to a few hundred bales daily, without quotable change in price. The Arabia's news received yesterday brought the market to a stand, buyers and sellers alike waiting to see the effect of the news at the South before operating. The week's sales reach about 4,000 bales, principally on the pot, at 11c for middling Uplands.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts. Week's Receipts. bales	Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. P'ts. bales
1859-60.....	165000	2308000	75000	27000	13000
1858-59.....	150000	1931000	49000	15000	23000
1857-58.....	94000	1145000	26000	20000	9000
1856-57.....	125000	1611000	30000	14000	7000
1855-56.....	100000	1626000	29000	12000	11000
1854-55.....	65000	978000	56000	11000	11000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60.....	896000	219000	103000	1218000	978000
1858-59.....	686000	264000	155000	1005000	770000
1857-58.....	360000	131000	93000	584000	567000
1856-57.....	342000	155000	105000	602000	760000
1855-56.....	529000	189000	134000	852000	681000
1854-55.....	467000	109000	60000	636000	345000

Thus the receipts show an increase of 377,000 over those of last year, and an increase of 1,163,000 over 1857-58, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock.
Compared with last year.....	Inc.310000	...Dec. 45000	...Dec. 52000	...Inc. 213000	...Inc. 208000
Compared with 1857-8	Inc. 536000	...Inc. 88000	...Inc. 10000	...Inc. 634000	...Inc. 411000

Southern Markets by Telegraph.—Business was interfered with by the holidays in the early part of the week, and some factors being anxious to sell, prices were unsettled. As the demand became more regular, however, holders showed more firmness, and the rates continued to harden as the activity increased. A temporary falling off in the receipts, and a fall in the Mississippi, strengthened factors and stimulated buyers, so that prices show a slight advance at the close, the New Orleans and Mobile quotations being $\frac{1}{8}$c over last week before receipt of the Arabia's news. Freights are without change during the week.

By telegrams from New Orleans and Mobile, the joint receipts for the succeeding week amount to 103,000 bales against 95,000 last year, which points to only a slight further increase in the excess next week.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

NEW YORK, Jan. 14.—Cotton continues steady. Middling Uplands, 11c to 11$\frac{1}{8}$c.

There has again been a good demand for cotton this week, both from the trade and for export: a considerable business has also been transacted by speculators in good cotton. The supply of cotton on the market has been constantly large, and for the most part the demand has been freely met. There has, however, been a very pressing inquiry for upland cotton, chiefly for export, and prices for this class are decidedly firmer; this is also the case with the better class of Orleans. In other grades of American there is little or no change. The lower qualities of Egyptian are still unsaleable, but the better move readily. Brazil are without much change. East India are in good steady demand, at former rates. The sales to-day are 10,000 bales; prices firm. The reported export amounts to 11,570 bales, consisting of 6,980 American, 180 Brazil, and 4,410 East India. Vessels arrived and not reported—one from North America.

MARKETS IN THE MANUFACTURING DISTRICTS.

Although there has been less activity in the demand for manufactured goods, both for home use and export, last week's advance in the quotations has been well supported. Most of the mills are fully employed. Stocks are everywhere very light, and higher prices are anticipated, owing, in some measure, to the high value of the raw material. In the iron and coal districts a full average business has been transacted.

MANCHESTER, Jan. 26.—This market has been quiet, but very steady, at the full rates of last week. Both buyers and sellers, having already undertaken a sufficiency of engagements for some length of time, seem inclined to pause in their anticipatory dealings; but small wants which can be promptly supplied are more readily attended to, provided extreme prices be readily paid. By telegrams from Calcutta to the 9th instant, that market had added little to the improvement which had been gained to the 30th ult.; and at Bombay to the 11th inst., accounts for piece goods were still dull. So that there has been no further stimulus to operations at the high range which has now been reached. But the slight diminution in cotton receipts at the Atlantic ports, and the steadiness in Liverpool, have not been quite overlooked here; and the difficulty which is apprehended in some quarters from the movements of operatives as the spring advances, has been a source of tacit support where contracts are of long duration, otherwise the market is without feature, and our quotations are unchanged.

HUDDERSFIELD.—Business has mostly been transacted in a general way. The country trade has again begun to revive. The wool trade is very active, and manufacturers in this district are well employed.—LEEDS.—The articles principally in request were mixtures and other descriptions of fancy goods now in season, the inquiry being limited for ordinary cloths. Unions of good quality were also in demand, at current

rates. The mills in the district continue to be fully employed. In the flax trade a little more animation is perceptible.——HALIFAX.—The carpet and woollen trades in this town and district are both in an active and prosperous condition. Yarns and wools are firm in price. ——ROCHDALE.—Wool—We have no change in prices in our warehouses, and business still continues to be of a very limited character. Flannel—Low goods are the most active just now. The Yorkshire manufacturers are still well engaged.——BRADFORD.—Wool—Combing skin is now becoming plentiful, and will no doubt be pressed on the market to realise the present rates. Yarns—There is no improvement in this branch. Prices are too high for speculation, hence the stillness that pervades the trade. Pieces—It is said that the large exports of last season are not selling to the extent that was expected, consequently the surplus remains for the spring demand.——LEICASTER.—There continues to be a good business doing in most descriptions of hosiery for the period of the year. Wools are making high prices.——NOTTINGHAM.—The fancy trade is yet very dull. In the silk branch there is but little improvement to note. There is a good amount of business doing in the hosiery trade, many departments being entirely engaged, and the trade generally is in a satisfactory state. ——BELFAST.—Yarns have been in good request, at full quotations. Linens have maintained their previous value.——DUNDEE.—The market generally has continued steady, at full currencies.——BIRMINGHAM.—There is a steady and progressive movement about the trade of this town which is most satisfactory; in all the principal trades the artisans are making full time, any slackness which may exist in one department being counterbalanced by more activity in another, so that returns come up to a pretty good average. The iron trade remains in the condition reported at the conclusion of the quarterly meetings.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—A quiet tone has pervaded the market, yet general quotations remain steady, notwithstanding the diminished inquiry from the home refiners. Grainy sugars of good to fine quality have sold steadily at about the former value, but soft and low East India went slightly cheaper in some instances. There were 1,425 casks West India disposed of to yesterday, including the Barbadoes by auction, which ranged from 37s 6d to 44s per cwt for low to fine quality, with a few lots brown Jamaica at 39s 6d to 41s per cwt. Arrivals are still on a very moderate scale. The week's deliveries amounted to 4,620 tons, and the stock is only 2,640 tons above that of last year at the same date.

Mauritius—5,517 bags of the new crop found buyers at steady prices, viz., 40s 6d to 45s for grainy sorts, with one lot fine crystalised, 50s 6d; but the lower kinds were easier; dark grey, 38s 6d to 39s 6d; brown, 31s 6d to 38s 6d per cwt. Business has been done by private contract.

Bengal.—3,372 bags in the public sales about half found buyers. Cossipore, 44s to 47s 6d per cwt. The remainder bought in above the value.

Madras.—4,506 bags partly met with buyers. Native brown and yellow, 32s to 37s; Jaggery, 30s 6d. 2,300 bags grocery sold at 44s to 49s; soft, 41s 6d to 44s per cwt.

Foreign.—The transactions privately have been very limited, including 600 boxes Havana: yellow, 41s; white, in bond, 32s 6d to 34s. 2,000 bags brown Bernambuco brought 36s. At auction, 4,662 bags Siam went as follows: strong grey, 45s 6d to 47s 6d; good greyish yellow, 44s to 46s per cwt.

Refined.—The market is inactive, and prices about the same as last quoted, viz. 51s 6d per cwt for common goods. Crushed and pieces remain about the same.

MOLASSES.—100 puns have sold at 17s per cwt for Cuba muscovado and Barbadoes.

RUM.—More business has been done, but at rather lower rates for common kinds. Leewards, 1s 8d to 1s 10d; Demerara, 2s to 2s 2d; and a parcel of Penang at 1s 7d per proof gallon.

COCOA.—No sales of importance have been made. The market is firm with limited supplies offering. 72 bags Surinam by auction brought 78s to 78s 6d. 90 bags Trinidad were taken in at 73s to 77s, and 60 bags from Hamburg at 60s per cwt. Privately a large business has been done in Bahia.

COFFEE.—The few parcels brought forward have found steady buyers at last week's prices, although the market still presents rather a quiet appearance. 582 casks 400 barrels and bags plantation Ceylon chiefly sold as follows: fine ordinary to middling, 64s to 73s; good middling to fine 74s to 92s. 880 bags 224 casks native went at 60s to 62s for good ordinary to superior bold picked. 1,256 bags Madras: fine to fine fine ordinary, 65s 6d to 70s 6d. 35 cases 249 bags Neilgherry, 68s to 80s 6d for pale to good; with fine at 91s 6d. A cargo of good firsts Rio has been sold at 58s per cwt for Sweden.

TEA.—The trade continue to purchase the lower grades of congou freely, and rather higher rates have been paid. Common, which is rather scarce, commands 1s 5½d, and good sold at 1s 5¾d per lb yesterday.

RICE.—Transactions have been moderate this week, and prices remain without alteration. 7,641 bags Rangoon offered by auction were bought in: low, 7s 6d to 8s; fair, 9s 6d to 10s. 2,270 bags Arracan: common to good Necrancie, 8s 6d to 10s. 1,320 bags low Moulmein, at 7s 6d to 8s. 1,333 bags Bengal partly sold: low broken to low middling yellowish white, 9s to 10s; middling bold, 11s 6d; cargo, 9s to 9s 6d per cwt. Only 5,000 bags are reported by private contract.

IMPORTS and DELIVERIES of RICE to January 21, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons

Exported	1500	1055	655	2250
Stock	69430	85740	69700	56630

SAGO.—693 boxes were mostly bought in: dull medium at 16s to 16s 6d; small, 17s per cwt.

SPICES.—The public sales have gone off with less spirit than of late. 42 cases nutmegs found buyers at about the previous value: low small to middling mixed brown, 1s 4d to 2s 2d. 12 cases mace sold at 1s 3d to 2s for ordinary dark to good bright. Zanzibar cloves barely maintain the recent advance. 614 bags in the sales chiefly sold: low, 3¾d to 3⅞d; fair, 4d to 4⅛d; one lot of Penang, 1s 3½d per lb. White pepper is less sought after, but holders appear firm, and 110 bags Singapore were bought in at 7½d. Black has been firmer, commanding a slight advance. 1,865 bags Singapore went at 4¼d to 4½d for greyish to good black. 1,070 bags heavy Malabar realised 5⅞d per lb. Business has been done in Sumatra by private contract. Pimento is quiet at 4d to 4⅛d per lb. Nothing of importance has occurred in cassia lignea. A small parcel by auction sold cheaply at 100s to 103s for second and first piles of common quality. Bengal ginger finds ready buyers at 24s to 24s 6d in bond. 34 barrels Jamaica sold steadily at 90s to 97s per cwt.

SALTPETRE.—The market, which at one time this week showed an upward tendency, has since been quiet. Privately, very low to fine Bengal sold at 37s 6d to 42s, and two small parcels afloat at 42s to 43s, usual conditions; but yesterday 1,100 bags by auction partly found buyers at 3d to 6d reduction: refraction 4¾, 42s 6d; 5, 42s; 6¾, 41s 6d; 21¼ to 9¼, 37s 6d to 39s per cwt. Holders generally remain firm.

IMPORTS and DELIVERIES of SALTPETRE to January 21, with STOCKS on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	900	1150	850	520
Delivered	935	760	870	600
Stock	3810	3340	6510	2040

COCHINEAL.—191 bags by auction were partly sold. Honduras silvers, pasty and low, to 3s to 3s 1d; small to good silvers, 3s 2d to 3s 10d; black, 4s to 4s 9d per lb. Teneriffe silver, 3s 6d to 3s 7d; black, 3s 6d to 3s 9d per lb.

LAC DYE.—The active demand noticed last week has partly subsided, but good marks are generally held for rather higher rates. The stock is 10,740 chests, against 12,500 last year, 12,900 in 1858, and 13,680 in 1857 at same date.

METALS.—The sales have been generally unimportant, without any material alteration in quotations. Scotch pig iron has ranged from 57s 6d to 58s 6d during the week, closing at the latter price this morning. Manufactured presents no change. Copper is firm. Lead has been active. Transactions in spelter are limited; the last business done was at 21*l* 10s to 21*l* 15s per ton on the spot for spring shipment. Foreign tin remains dull: Straits, 131s to 132s; Banca, nominal. No change has occurred in the value of English.

HEMP.—The sound portion of 630 bales common roping Manilla offered by auction was disposed of at 22*l*. Privately there appeared to be few buyers, even at present reduced rates. The jute sales on Wednesday passed off steadily. Of 6,050 bales, the bulk sold: low to fine, 11*l* to 21*l* per ton.

HIDES.—127,000 East India by auction sold at an advance of ½d to ¾d per lb for the better qualities.

LINSEED.—About 1,300 tons of Calcutta seed have sold, to arrive, at 48s to 49s, and several cargoes of Taganrog and Odessa, at 50s to 50s 6d, for the United Kingdom. On the spot, Calcutta sells from 49s to 50s; Bombay, 52s per quarter.

OILS.—Sperm, influenced by the advices of higher rates from America, has advanced about 2*l*: American, 95*l*; colonial, 96*l* per tun. The stock of olive is chiefly in second hands; holders have obtained 58*l* for Galipoli, and 54*l* to 54*l* 10s per tun for cargoes. More inquiry prevails for palm, and fine Lagos commands 46s. Cocoa-nut is rather dearer: Cochin, 44s to 45s; Ceylon, 42s to 42s 6d per cwt. The market for linseed is again quiet, at 27s 6d and 28s to 28s 6d for forward delivery. Rape has sold more readily: foreign refined, 38s 6d; brown, 36s per cwt.

TURPENTINE.—Rough is quoted at 9s 6d, sellers, but spirits continue in good demand, the last rates being at 36s per cwt for American in barrels.

TALLOW.—Prices of foreign have not fluctuated much since last Friday, and the demand has been steady. This morning first sort Petersburg Y C. rules at 58s 9d; the same for March; 56s April to June; and 53s per cwt for delivery in the last three months.

PARTICULARS OF TALLOW.—Monday, January 23.

POSTSCRIPT.

FRIDAY EVENING.

SUGAR.—The market has been quiet to-day. 446 casks West India, by auction, were only partly sold at 40s to 46s 6d for grainy Demerara. There have been 1,740 hhds sold during the week. 338 bags Bengal were bought in above the value. 200 casks Cuba sold privately.

COFFEE.—279 casks 197 barrels and bags plantation Ceylon found buyers, but the common sorts went rather cheap. 539 bags native partly sold from 59s to 61s per cwt.

RICE.—1,000 bags Bengal sold at 9s 6d to 10s for Ballam.

SALTPETRE.—200 bags low Bombay were part sold at 31s per cwt.

COCHINEAL.—179 bags went off steadily.

OIL.—400 casks palm, 40s to 46s 6d. 550 casks cocoa-nut: Cochin, 43s 3d to 45s 6d; Ceylon, 42s to 42s 6d (bought in); Sydney sold at 42s 3d per cwt.

TALLOW.—Y.C. on the spot sold at 59s. Town rose to 61s per cwt.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week; common lumps have been sold at 51s. The accounts from Holland present no variation worth noting.

GREEN FRUIT.—Market, owing to bad weather, has been depressed. Some cargoes of oranges, sold by Keeling and Hunt, went 2s per pack.

age lower. Lemons sustain their value, the stock being in few hands. No alteration in nuts, excepting chestnuts, which have advanced 2s per barrel. Seville sours in request; stock light, and limited quantity expected.

DAY FRUIT.—The fruit trade has been, as usual in January, extremely dull. Prices of all sorts of fruit are moderate, and quality good. In currants a few sales have been made. Common sorts, 34s to 35s; and middling, 36s, are inquired for. Sales have been made at 35s to 37s. Cheame raisins and Valentias are held firmly, and but little done. Eleme are scarce. Sultanas lower and neglected. Figs easier, though stock is small.

COLONIAL AND FOREIGN WOOL.—Market inactive, prices very firm.

FLAX.—Nothing doing.

HEMP.—Market very inactive, and little business to report this week.

COTTON.—Sales of cotton wool from Friday, 20th January, to Thursday, 26th, inclusive:—700 bales Surat, at 4½d to 5½d for middling to good; 300 bales Madras, at 4¾d to 5⅝d for middling to good fair Tinnivelly. The market continues very steady, and a fair amount of business has been transacted at the full prices of last week.

SILK.—The silk market is rather quiet, but prices without alteration in raw silk.

TOBACCO.—The market has presented a quiet appearance, and sales, in most instances, of a limited character, and for immediate consumption. Inquiry has been made for some descriptions for exportation, but at prices holders are not inclined to accept.

LEATHER AND HIDES.—The demand for leather during the past week has continued good, decidedly in excess of the supplies, so that the stocks on hand are still further reduced. Prices, however, remain unaltered. At Leadenhall, on Tuesday, the articles most in request were English and foreign butts, shoulders and bellies, dressing hides and shaved hides, of which very few remain on hand, English horse hides, and calf skins 40 lbs and under. At the public sales this week the most important articles were of East India produce, of which 148,000 East India kips and 8,800 buffalo hides were offered, and most of them sold, generally at an advance of ¼d to ½d, and in some cases 1d per lb. Not any Buenos Ayres hides were offered: the few Monte Video and Rio Grande were withdrawn. Australian hides were a shade higher: 10,700 sold. All the Cape hides were sold, at fully late prices, one lot 8⅝d. 2,875 Petersburg kips made 13d and 13½d.

METALS.—The market is quiet for metals, and there is little to note. Copper is firm, but a flat market in France keeps operations within a moderate compass here; prices, however, are firm. Iron—There is a better demand for manufactured, and Scotch pig has advanced. Tin is quiet in all descriptions, with prices inclining to favour buyers. Spelter maintains a steady position. Tin plates are in limited demand.

TALLOW.—Official market letter issued this evening :—

	s	d
Town tallow	61	0
Fat by ditto	3	2½
Yellow Russian	60	6
Malted stuff	42	6
Rough ditto	25	0
Greaves	15	0
Good dregs	7	0

Imports this week 80 casks.

PROVISIONS.

The bacon market still continues very flat; scarcely any sales made this week. Shippers still holding owing to the price they are giving for pigs. Some resales made at 60s to 61s, the bacon having been landed some time.

Friesland butter shorter supply this week; all sold at 124s. Bosch and Hollands dearer: a good demand at 104s for fine.

COMPARATIVE STATEMENT OF STOCKS AND DELIVERIES.

METROPOLITAN CATTLE MARKET.

THURSDAY, JAN. 26.—A fair average time-of-year supply of beasts was on offer in to-day's market. Nearly all kinds met a dull inquiry, at, in some instances, a decline in the quotations of 2d per 8 lbs. The extreme value of the best Scots was 4s 10d per 8 lbs. We were but moderately supplied with sheep, which moved off steadily, at full prices; the best old Downs having produced quite 5s 6d per 8 lbs. The few calves on offer were taken off freely, at extreme rates. Pigs were firm in price; put milch cows ruled somewhat heavily.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	4	5	6
Second quality ditto	3	8	4	0	Large coarse calves	4	10	5	4
Prime large oxen	4	2	4	6	Prime small ditto	5	6	5	10
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto	4	4	4	8	Suckling calves...each	18	0	22	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	23	0	28	0

Total supply—Beasts, 1,100; sheep, 3,462; calves, 91; pigs, 312.
Foreign supply—Beasts, 204; sheep, 526; calves, 54.

NEWGATE AND LEADENHALL.

FRIDAY, Jan. 27.—Fair average supplies of each kind of meat are on offer here to-day. On the the whole, the trade rules somewhat heavy, as follows :—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	8	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	6	5	10	Small pork	4	4	4	10

HOP MARKET.

BOROUGH, Monday, Jan. 23.—Our market exhibits no change of importance, the demand being limited, and the currency remaining firm, as follows:—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Jan. 27.—The market for hops remains steady, with prices unaltered.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Jan. 23.—During the past week the arrivals coastwise have been very light, owing to contrary winds, and the best samples made a little more money. The following are this day's quotations:—York Regents, 100s to 135s; Lincolnshire ditto, 90s to 110s; Dunbar ditto, 105s to 130s; Kent and Essex, 90s to 100s; Perth, Forfar, and Fifeshire ditto, 90s to 110s; ditto Rocks, 75s to 85s; ditto reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 65s to 75s per ton.

THURSDAY, Jan. 26.—The arrivals of home produce have been limited at this market since our last report, especially by water conveyance. Trade is tolerably active at the following quotations:—York Regents, from 140s to 150s; ditto Flukes, 130s to 140s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto, Cups, 80s to 95s; Dunbar, 120s to 140s; and French, 90s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 10s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. A good supply, and a steady trade.

CUMBERLAND.—Meadow hay, 2*l* 15s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. Trade tolerably firm.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 4*l* 4s; clover, 3*l* 10s to 5*l* 5s; and straw, 1*l* 4s to 1*l* 10s per load. A fair average supply, and a steady demand.

COAL MARKET.

MONDAY, Jan. 23.—Holywell 16s—Howard's West Hartley 15s 9d—Wylam 17s 6d—Carway and Duffryn Malting 23s 6d—Gellia Cadoxton Steam 23s 6d—Wasbro' Park Steam 14s 6d. Ships at market, 10; sold, 10.

FRIDAY, Jan. 27.—There was no less than 265 ships at the market, of which 250 were disposed of at previous prices. Best Wall's-end 20s to 20s 6d; seconds 18s to 19s 9d; Hartleys 14s to 15s; coals for manufacturers 13s 6d to 15s per ton.

LIVERPOOL MARKETS.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 27.—Grain market steady and feeding stuffs rather dearer; wheat in fair demand at full rates of Tuesday; flour firm; Indian corn and beans 6d dearer; oatmeal, oats, and barley, in fair request, at full prices.

METALS

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Jan. 27.—For both Welsh and Staffordshire manufactured iron there has been only a moderate demand during the past week, but prices are well maintained. The market for Scotch pig iron has been quiet, and the speculative feeling has fluctuated, according to the various views taken of the French duty question. Copper is steady. Most other metals remain with little or no change.

The Gazette.

TUESDAY, Jan. 24.

BANKRUPTCY ANNULLED.

W. Dugard, jun., Birmingham, coach furniture maker.

BANKRUPTS.

T. Simmons, Hurst, Berkshire, cattle salesman.
J. W. Sumner, Wray park, Reigate, builder.
W. Chellew, Point, near Truro, Cornwall, commission agent.
E. Hyett, Worcester, baker.
T. Marshall, Plymouth, builder.
G. Keenor and S. Baillie, Exeter, milliners.
G. Richardson and G. T. France, Huddersfield, cloth merchants.
T. Lightfoot, Sunderland, shipbuilder.

SCOTCH SEQUESTRATIONS.

A. M'Alister, Paisley, manufacturer.
D. Stanlker, Edinburgh, accountant.

J. Simpson, wright, Ferry-Port-on-Craig, Fifeshire.

DEATH.

At 3 Canonbury place, Islington, on the 26th inst., Daniel Hazard, Esq., in the 70th year of his age.

ASTLEY'S AMPHITHEATRE.—Mr W. Cooke, who has managed Astley's with great credit for some years, is about to retire, and intends taking leave of the public in a farewell benefit, which is appointed for Monday next. The equestrian talents of himself and his numerous family gained him a name in every province of England long before he appeared in London as the successor of Mr Batty, who immediately followed the renowned Ducrow, and he stands as the acknowledged chief of English horsemanship.

COMMERCIAL TIMES
Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

Add 5 per cent. to duties on currants, figs, pepper, tobacco, wines, and timber, deals, wood, &c., from British Possessions.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending Jan. 14 amounted to 448,080*l*, and for the corresponding week of 1859 to 416,690*l*, showing an increase of 31,390*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 190,086*l*, and for the corresponding week of last year to 177,869*l*, showing an increase of 12,217*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Jan. 23.—The railway market was dull, and after experiencing a further decline closed at a partial recovery. In the colonial market there was a tendency to reaction in Indian guaranteed. Grand Trunk stock was also flat at 39¼ to ⅜, while Great Western of Canada shares improved to 12⅝ to ¾. Foreign descriptions were heavy, especially Lombardo-Venetian, Paris and Lyons, and Northern of France, all of which showed a reduction. In American securities the Illinois Central Free Land bonds and New York Central shares were quoted lower. New South Wales Government debentures advanced ½ per cent. Mines were quiet and generally steady. In joint stock banks, London and Westminster were firmer. The principal feature in miscellaneous descriptions was a good demand for Ocean Marine Insurance shares, the closing price being 2½ to ⅝ premium.

TUESDAY, Jan. 24.—The railway market was again dull, and in a few of the leading British stocks a fractional decline took place. Caledonian, however, slightly improved. There was a further reaction in one or two Indian guaranteed descriptions, and Great Western of Canada and Grand Trunk also declined. In foreign, shares Lombardo-Venetian were lower. San Paulo left off without change. No alteration of importance occurred in American securities. Mines were in moderate demand, and in some cases higher. The tendency in joint stock banks was less favourable, except London and County, which continue to show considerable firmness.

WEDNESDAY, Jan. 25.—The railway market was inactive, but with a firmer appearance. Midland was especially in demand, and advanced more than ½ per cent. Lancashire and Yorkshire and London and North-Western also improved, while a reaction occurred in Caledonian. In the colonial market there was a fall of 1 per cent. in Grand Trunk of Canada, the final quotation being 37¾ to 38¼. Foreign shares were generally without change, the only important movement being a reduction in Lombardo-Venetian. San Paulo left off ¼ to ½ discount. American securities, mines, and joint stock banks closed about the same as yesterday. In miscellaneous descriptions there was an improvement in Peninsular and Oriental Steam.

THURSDAY, Jan. 26.—The railway market was firmer after the opening, but partially relapsed before the close. The final quotations, however, of several of the leading British stocks show a fractional advance over yesterday. The principal movement in colonial stocks has been a further decline of 2 per cent. in Grand Trunk of Canada, the final price this evening being 35¾ to 36¼. Buffalo and Lake Huron have likewise been heavy. In foreign shares, Lombardo-Venetian left off without change at 2⅛ to ¼ premium, and San Paulo ¼ to ⅛ discount. American securities were rather less steady, especially those of New York and Erie and Pennsylvania Central Railways. Nova Scotia Government debentures were also quoted ½ per cent lower. Mines were dull, and in one or two cases show a slight reduction. Joint stock banks closed about the same as yesterday. In miscellaneous descriptions a decline occurred in Scottish Australian Investment. Canadian new loan left off, bonds 100¾ to 101; scrip, 2¾ to 3 premium; Bank of Turkey, par to ¼ premium; Ocean Marine Insurance, 2⅜ to ⅝ premium; and Universal Marine, ⅞ to 1¼ premium.

FRIDAY, Jan. 27.—The transactions in the railway share market have again been very limited, and increased heaviness prevailed. Brightons and South-Easterns declined 5s; Great Westerns, and Lancashire and Yorkshire 10s; and Caledonian 1*l*. Foreign lines are at almost nominal values: Bahia and San Francisco are 6⅜ 6½, and West Flanders 5¼ 5½. In the colonial market East Indian have declined to 101⅛ ⅜; Grand Trunk of Canada to 35 and 36; and Great Western of Canada to 12½; Punjaubs were flat at 4½. Joint stock bank and miscellaneous shares remain at about former quotations.

CHRISTMAS TOILETTE

REQUISITE and NEW YEAR'S GIFT.—Among the many articles of luxury and value purchasable at this season, none can be obtained possessing the manifold advantages of OLDRIDGE'S BALM of COLUMBIA. It nourishes the roots and body of the hair, imparts the most delightful coolness, with an agreeable fragrance of perfume. And at this period of the year prevents the hair from falling off, or if already too thin or turning grey, will stop its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustache. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

79 St Paul's churchyard, London.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal Wm Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

HOLLOWAY'S OINTMENT.—The number of years this invaluable ointment has stood the test of public opinion, and the longer known the better appreciated, is a testimony of itself more powerful than anything that could be written in praise of its truly wonderful curative properties. For ringworm, scald heads, and all diseases of the skin, it is unequalled; recent wounds, or old sores, or ulcers, may very rapidly be healed by its use. For tumours, bad breasts, or scrofula, there is no remedy to be compared with it. It purifies both blood and solids. When diligently rubbed upon the skin, previously well bathed in warm water, the ointment is quickly absorbed into the system, and thoroughly penetrates every living fibre and tissue.

CURE OF COUGHS, COLDS, ASTHMA, by DR LOCOCK'S PULMONIC WAFERS.—From Mr William J. Dale, Chemist, 65 Queen street, Portsea. "Gentlemen,—From the immense sale I have had of Dr Locock's Pulmonic Wafers throughout this populous locality, I must do you the justice to say that I consider them invaluable for coughs, colds, asthma, &c, and the overflowing testimony I have received voluntary from all classes who have benefited by their virtues, fully warrants me in stating the above. (Signed) W. J. DALE" DR LOCOCK'S PULMONIC WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To Singers and Public Speakers they are invaluable for clearing and strengthening the voice. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all chemists.

THE NEW FRENCH REMEDY (Protected by Her Majesty's Royal Letters Patent), is specially prepared by the "ECOLE PHARMACIEN, PARIS," for effectually restoring the Nervous and Debilitated to a state of Vigorous Health and Manhood, when the system has been weakened by the Errors of Youth, or from any other cause. A Packet of this truly marvellous Remedy will be sent, free from observation, to any address, on receipt of 14 postage stamps.—Address, stating particulars, to Mons. DUVAL, Patent Medicine Agent, Birmingham.

NOTICE.—A Medical Book on the above Diseases, showing sufferers how they may safely cure themselves, free by post for one stamp to prepay postage.

Just published, in 1 vol. 8vo, with numerous Anatomical Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.

MR CURTIS, AUTHOR OF THE Medical Treatise "MANHOOD," may be consulted as usual, either by letter or personally, at his residence, 15 ALBEMARLE STREET, PICCADILLY, LONDON. The efficacy and harmless nature of the remedies employed by MR CURTIS, having been demonstrated by the most complete success during a practice extending over a period of 20 years, nervous sufferers of every class, including those afflicted with want of energy, loss of memory, pains in the back, self-distrust, functional incapacity or debility, have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

At home for consultation daily, from Ten till Three, and Six till Eight. Sundays from Ten till One.

REVIEWS OF THE WORK.

"CURTIS ON MANHOOD.—This is a truly valuable work, and should be in the hands of young and old."—SUNDAY TIMES, 23rd March, 1856.

"It is the duty of all men to study the laws of their body, no less than those of their mind. In the pages of this work will be found golden rules for regulating the one and preserving the other."—MARK LANE EXPRESS, March 31, 1856.

"The author has conferred a great boon by publishing this little work, in which is described the source of those diseases which produce decline in youth, or more frequently premature old age."—DAILY TELEGRAPH, March 27th, 1856.

"The book under review is one calculated to warn and instruct the erring, without imparting one idea that can vitiate the mind not already tutored by the vices of which it treats."—NAVAL AND MILITARY GAZETTE, 1st Feb., 1856.

An enlarged edition of the above work has just been published, and may be had of Pipes and Co., 23 Paternoster row; and all booksellers. Price One Shilling, or free by post, in a sealed envelope, from the Author for 14 stamps.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S CELEBRATED SHERRIES.

RAIL PAID TO ANY STATION IN ENGLAND.

THOMAS NUNN AND SONS,

WINE, SPIRIT, AND LIQUEUR MERCHANTS,

(ESTABLISHED 1811),

21 LAMB'S CONDUIT STREET, FOUNDLING HOSPITAL, W.C.,

Respectfully call the attention of the public to the SHERRIES of the above eminent shipper: they are extremely soft and nutty, and so perfectly mellow and free from heat or the slightest approach to acidity, as to render them alike favourites both with the connoisseur and the invalid.

THE GREAT EXHIBITION OF 1851 —Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF D'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. The Prices the same as in Paris, with the charges of importation only added. Catalogues, with marginal illustrations, may be had free on application. N.B. A large and splended collection of Ornamental Clocks, Vases, Candelabra, and other objects of taste.

LAWRENCE HYAM, in his Bespoke Department, employs the most skilful cutters, under his immediate superintendence, and carefully examines every garment previous to its being sent home. The Trousers, at 17s, made to measure, are cut upon such principles as to ensure true and elegant fit,—whether the wearer be walking, riding, or sitting Gentlemen may select from a stock of cloths of all descriptions,—amounting to £16,000;—and the extraordinary variety cannot fail to meet the taste of the most fastidious.

LAWRENCE HYAM'S JUVENILE ATTIRE has secured for him the largest connection among parents and guardians; and having now been established above 20 years, he can safely refer to his great and continued success, as an indication of the upright manner in which his large business is conducted.

CITY ESTABLISHMENT, 36 Gracechurch street,
WEST END ESTABLISHMENT, 189 and 190 Tottenham court road.

ECONOMY AND EXCELLENCE.—E. MOSES and SON, Merchant Tailors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules for self-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—
LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).
COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT, made of various colours and patterns, particularly adapted to walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

LAMPS, CHANDELIERS, HALL LANTERNS, &c.

The most extensive and carefully selected stock of French and English Lamps, comprising the choicest productions for this season, at prices much below those of former years. Paris Lamps (Moderator) from 5s each. A superbly painted ditto, complete, 35s; usual price, 60s. Finest French Colza Oil, 4s per gallon.—PANKLIBANON, 56 Baker street, Portman square, W.

PLATE, CUTLERY, STOVES, Ranges, Fenders and Fire Irons, Lamps, Baths, Copper and all other Kitchen Goods, arranged most conveniently for inspection at the PANKLIBANON. The stock comprises every requisite for House Furnishing, and is unequalled for extent, quality, and cheapness. All goods marked in plain figures and warranted. Visitors not importuned to purchase. Illustrated Catalogues free by post.—56 and 58 Baker street, Portman square, W.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 67 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON.....	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER.....	At Ducie place.
DUDLEY.....	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW.....	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM.....	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES.....	At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Offices, 71 Lombard street, 37 Regent circus, and 36 Leadenhall street; and St Katharine Wharf.

IMPORTANT NOTICE.
GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY.
And as some unprincipal Parties are now making and offering for Sale an Imitation of the
GLENFIELD STARCH,
we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.
WOTHERSPOON and CO., Glasgow and London.

FENDERS, STOVES, FIRE-IRONS, and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.
The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair: larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.
A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

DISTIN, Sen., respectively announces that his GRAND RETIRING BENEFIT CONCERT will take place at the above great Hall, on Wednesday evening, Feb. 1, 1860, under the following distinguished patronage:—His Majesty the King of Hanover, Right Hon. the Earl of Zetland, Right Hon. Lord Panmure, Most Noble the Marquis of Bresdalbane, Right Hon. the Earl of Ripon, Right Hon. Earl Howe, Right Hon. Viscount Combermere, Right Hon. Lord de Tabley, Right Hon. Lord Leigh, F. Dundas Esq. Supported by the leading Vocalists and Instrumentalists of the day.
Conductors - Mr Franceseo Berger, Mr George Loder, Signor Randegger, Signor Campana, and Mr William Ganz. Admission, One Shilling. Tickets, 2s, 3s and 5s; Reserved seats 10s 6d; to be had of Mr Surman, 9 Exeter Hall. The concert will commence at Seven o'clock precisely.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School. Superintendent of the Food Collection at the South Kensington Museum, &c., &c.
"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES,
ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C

An Important Mineral Discovery was made while cutting the tunnel of the South Devon and Tavistock Railway, in the lands belonging to Sir Massey Lopes, Bart., Bickleigh, Devon. It has excited some sensation, and led to very great competition among mining men and others, to obtain the property. A lease has been obtained for 21 years,—royalty 1-15th.

THE BICKLEIGH VALE PHŒNIX

COPPER and TIN MINING COMPANY (Limited).

To be divided into 7,500 Shares of £2 each. £1 per Share to be paid up on allotment, whereof 10s per Share deposit to be paid on application at the bankers. No Shareholder liable beyond the actual amount of his own Share.

DIRECTORS.

George Cyprian Hacker, Esq., Aldermanbury, and 38 Grove road, St John's wood.
William Thomas, Esq., Gresham House, and Clifton villa, Elm grove, Peckham.

BANKERS—Commercial Bank of London, Lothbury, City.
SECRETARY (pro tem.)—Robert Gallon, Esq.
REGISTERED OFFICES—167 and 168 Gresham House, Broad street, City, London.

The Bickleigh Vale Phœnix Mine is brought before the public not as a speculative mining job, but as a fair prospective medium for investment, fully as remunerative as any of our first-class dividend-paying mines in Cornwall or Devon

The past year has been remarkable for mining progress and mining success. £336,973 was paid in dividends, against £249,682 in 1858. The value of copper ores raised last year was £1,079,075, the quantity being 183,944 tons; and the average standard was as high as £132 6s—produce, 6¾. Tin advanced from 12 to 15 per cent., and lead maintained a good average position. The mining interest has reaped a good harvest for their investments generally, as, during the past year, numerous mines have entered the dividend list, while many others have increased their dividends.

This valuable mineral property is situated in the parish of Bickleigh, Devon, about 4 miles from Plymouth, and extends 800 fathoms on the course of the lodes; the main Copper lode, as opened at surface, is 12 feet wide, composed of a peculiarly fine gossan, and of quartz of a most favourable description. A fine Tin lode is also opened at the mouth of the tunnel from 4 to 6 feet wide, which, it is asserted, would of itself warrant the working of this grant, and with every prospect of a good dividend mine.

The stratum is a decomposed granite, similar to that of the rich Phœnix and South Caradon Copper Mines of Cornwall, and to the Devon Great Consols Copper Mine, as forming a junction of the granite and clay slate or killas,—mines remarkable for their great value as investments, and also as specimens of the extraordinary and lasting productiveness of the granite formation.

In driving the tunnel of the South Devon and Tavistock Railway, the main lode was intersected at about 11 fathoms below the point opened upon. At that shallow depth it is found producing rich carbonite, yellow and grey oxides, and malachite copper ores. The unusually large size of this lode, its perfect formation, the richness of the ore, together with the geological features of the surrounding district, continue to attract the attention of experienced mineralogists who have visited the spot; and all concur in pronouncing this the most important discovery yet made in the county of Devon, and advise more active and extensive operations, it being the general conviction among practical miners that the formation of copper lodes, producing near the surface such rich ore, with such an abundance of fine gossan on the back, can hardly fail to lead to a most valuable deposit of mineral, and at no great depth.

The purchase of this property has been secured for £2,000 in cash, and 1,500 paid-up shares; and as it is confidently expected that no further call will be necessary, the present proprietors have consented with this conviction to accept their paid-up shares as only now 20s paid up; and thus put their shares on a par with those of the body of shareholders.

The limited capital thus raised will be ample for the effectual development of the mine. Abundant water-power can be obtained by arrangement to work the machinery at all periods of the year. The River Snaugh runs close to the tunnel, and a good road passes through the property to the Copper quay. Besides which, its close proximity to the railway station affords unusual advantages for economically carrying on the works.

Forms of applications for shares to be had at the Company's offices, where prospectuses and reports can be obtained, and where samples of the ore can be seen, and all information obtained.

THE BICKLEIGH VALE PHŒNIX

COPPER and TIN MINING COMPANY (Limited).

The Directors hereby give notice, that no applications for Shares will be received after Tuesday, the 31st inst. No. 167 and 168 Gresham House, Broad street, City.

COCOA.—TAYLOR BROTHERS'

PATENT LENTILIZED COCOA is pronounced by Professor Letheby and Dr Hassall to be superior in nutritious element to all others. See their reports, printed on the labels of each canister. Sold by all grocers at 1s 6d per lb.

LILLE COLZA OIL

for MODERATOR LAMPS, 4s and 4s 6d per Gallon. It being essential in order to obtain brilliancy of light to have Oil that is perfectly bright and pure,—most especial care is taken by

WHITMORE and CRADDOCK

in selecting only from the finest parcels imported into this country, and they guarantee its delivery in precisely the same fine condition as when drawn from the tanks at Lille. Its burning qualities are unsurpassed by any known Oil at present in use. Delivered free of charge, anywhere within six miles, and by railway in casks of 15 gallons each and upwards.

WHITMORE and CRADDOCK.

The City Oil and Candle Depot, 16 Bishopsgate street within, London, E. C. Lists free.

EAST INDIAN RAILWAY

COMPANY.—The East Indian Railway Company is prepared to receive Tenders for FIFTY LOCOMOTIVE ENGINES and TENDERS. Drawings and specifications and forms of tender (upon which only tenders will be received), may be seen at the Company's offices. Tenders, endorsed "Tenders for Locomotives," must be delivered, in sealed envelopes, to the Secretary, on or before 12 o'clock at noon, on Tuesday, the 7th of February next. The Company is not bound to accept the lowest or any tender.—By order of the Board,

D. I. NOAD, Secretary.

East Indian Railway House, Alderman's walk, London, January 20th 1860.

MADRAS RAILWAY COMPANY.—

The Directors of the Madras Railway Company hereby give notice that the allotment of the £500,000 Debenture Loan, in terms of their advertisement of the 6th June last, has been completed, and that they are now prepared to receive applications for a further sum of £500,000 (making the full amount of one million authorised to be raised by the Secretary of State for India in Council), on the same terms, viz., for 5 years from the 1st July last, at 5 per cent. per annum, payment of the principal and interest being guaranteed by the Secretary of State for India in Council.

Particulars and forms of application may be obtained at the offices of the Company.

JAMES WALKER, Managing Director.

33 New Broad street, London, E.C., 27th Jan., 1860.

THE FESTINIOG SLATE QUARRY

COMPANY (LIMITED).

A large portion of the required new capital is now subscribed for, and it is probable that allotments to the public will shortly close.

The contract for the purchase of the fee-simple of the estate (260 acres), has been effected on very advantageous terms.

Preliminaries for the construction of the proposed railroad and the expansion of the works are entered upon, and both operations will be carried out with as little delay as possible, so as to secure an early dividend.

The capital of the Company consists of £100,000, in 20,000 shares of £5 each, of two classes, viz.:—A. participating in the entire profits after paying of dividend to B. B. bearing a Preference Dividend not exceeding 7½ per cent. per annum, payable out of the profits of the year.

Deposit, 1s per share on application, and 19s per share on allotment.

DIRECTORS.

David Davies, Esq., St James's Mount, Liverpool.
Alfred Erasmus Dryden, Esq., Lincoln's Inn, London.
Richard Morris Griffith, Esq., Banker, Bangor
William Mountcastle, Esq., Market street, Manchester.
Hugh Pugh, Esq., Banker, Pwllheli, North Wales.

BANKERS.

The London Joint Stock Bank, London.
The National Provincial Bank of England, Bangor.

The quarries of the Company are situated on the Tyddynyach estate, Festiniog, North Wales, contiguous to the extensive and profitable quarries of Lord Palmerston and others, whose production is known as the Portmadoc slate. The Tyddynbach estate contains 260 acres of proved slate rock of excellent quality, and of a dip most favourable for economic working, affords natural drainage, a plentiful supply of water-power, and ample room for deposit of waste.

The property is held by the Company under a 42 years' lease, granted in 1818 to the former small proprietary at a low royalty, with an option to purchase the fee-simple. This lease and option, with the whole of their quarries, buildings, works, and plant, have been purchased from the former proprietors by an allotment of 7,514 shares in the present Company taken at £4 per share paid.

The quarries have been in operation since 1848, and the quality of the slate and slabs produced, the reports based upon scientific surveys of the whole estate, and experimental tests applied at different points (see prospectus), fully establish the soundness of the undertaking, and the certainty of a large dividend resulting from further outlay of capital.

It is estimated that a further capital of from £30,000 to £40,000 will enable the Company to purchase the fee-simple; to construct a railroad three miles in length, connecting the quarries with the port of shipment (Portmadoc), whereby the cost of transit will be reduced two-thirds, and to increase the workings up to a production of 50,000 tons per annum, from which it is estimated a profit of from 30 to 40 per cent. would be realised.

Application for shares must be made to the undersigned, from whom proper forms and prospectuses may be obtained HARE and WHITFIELD, Solicitors.

HENRY WHITWORTH, Secretary.

Office, 6 Cannon street, London, E.C.

PROSPECTUS.

THE UNIVERSAL LIME LIGHT

COMPANY (Limited).

Capital, £300,000

(With power to increase it), in 30,000 Shares of £10 each. Deposit £2 per share on Allotment: the remainder as the Company's Contracts require the Capital.

Incorporated and Registered under the Joint Stock Companies Acts" of 1856, 1857, and 1858, by which the liability of Shareholders is limited to the amount of their Shares.

OFFICES OF THE COMPANY.—33 Cornhill, E.C.

Since the introduction of gas, at the commencement of the present century, no substantial improvement has been made in artificial lighting.

The advantage of a light combining steadiness, continuity, and diffusiveness, with purity, economy, and simplicity, as well as the capability of being managed with ordinary attention, has been universally acknowledged.

The object of this Company is to purchase and work out Patents which have successfully attained all these results.

The merits of these patents have been tested for a considerable time by an almost daily series of experiments, under the direction of eminent engineers, who have reported to the promoters that a more powerful, cheap, and continous Light cannot be produced.

A single medium jet of the improved Lime Light is equivalent to 40 Argand or 80 fish-tail gas burners, each consuming five cubic feet per hour, or to 400 wax candles, of four to the pound, and its power, unassisted by a reflector, is 40 times greater than the present Argand oil lamp used for coast lights under the same circumstances; its appliances admit of the volume of light being indefinitely increased, whilst it is so completely under control that it can be regulated to any desired power. It is peculiarly adapted for coast lights, steamers, sailing vessels, railways, tunnels, mines, signals, bridges, wharfs, churches, factories, theatres, public rooms, large and important thoroughfares, &c.

The Light does not extract the oxygen from the surrounding atmosphere, but leaves it in its full purity and quantity for respiration, which, in lighting crowded rooms, factories, &c., is of the greatest importance.

The patentees, who have expended considerable sums of money in bringing this valuable invention to its present state of perfection, evince their confidence in its success by agreeing to receive their remuneration in the following manner:—The Company, after having appropriated for their exclusive use a sum of £5,000, are to pay to the patentees, on their transferring to the Company the patent for the United Kingdom, with all improvements that they may hereafter make, one-fifth of the paid-up capital, until such proportion amounts to the sum of £16,000; and for every four shares that are allotted to the public, the Company shall transfer one share to the patentees until they are in possession of stock to the amount of £44,000.

This improved Lime Light can be supplied to the public at one-half the cost of common gas light.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Universal Lime Light Company (Limited).

Gentlemen,—I request you to allot me shares of £10 each in the capital of the above Company, and I agree to accept the same, or such smaller number of shares as may be alloted to me, and to pay the deposit thereon, also all subsequent payments, and to execute the Articles of Association when required.

I am, Gentlemen, your obedient servant,

Dated this day of 18 .

UNIVERSAL LIME LIGHT

COMPANY (Limited).—The Directors beg to inform the public that ARRANGEMENTS have been completed for LIGHTING the FIRST HALF of the NEW WESTMINSTER BRIDGE.

By permission of the Committee of Managers of the Stock Exchange, the Light was exhibited on the 24th of January to the committee and members. And, by permission of the Committee of Management of the City Club, their Light was also placed in the Reading Room of the City Club, Old Broad street, on the 17th and 18th of January, and exhibited to a numerous party of the committee and members of the Club, to whom it gave entire satisfaction.

It was also exhibited at the Evening Conversaziones at King's College, on the 19th and 20th of January, to a very large assemblage of fashionables and literati, who expressed their complete admiration of the light.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's Judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE's Two-Hole Black Pens, 46 King William street, London bridge."

THE BILL-BROKERS AND THE BANK OF ENGLAND.

We stated at the beginning of the year that we anticipated that money would soon tend to augment in value. We explained that the state of the market was so delicate that any new source of demand for money, however slight, would be almost certain to cause some rise in the rate of interest. Our anticipation has been verified, but we own that we did not expect that it would be so with such extreme rapidity. When we wrote, the rate of interest was 2½; it is now 4, being a rise of more than 50 per cent. within three weeks.

The special cause which has acted on the money market is the demand for specie to pay for the "rupee paper," or Enfaced Promissory Notes sent hither from Calcutta, though unquestionably other causes may have co-operated with it. This might at first sight appear to be too minute a cause to produce so great an effect; it might seem to be only a slight extension of our great import trade, very small in comparison with the whole of it. But this would not be a true view of the subject. The transaction is substantially a loan from England to India; promissory notes which used to be held by persons in India are now held by capitalists here; and such a demand from the East must inevitably produce a great immediate effect on the money market here, because it necessitates a large export of bullion, and a corresponding diminution in the reserve of the Bank of England.

The way in which the drain to the East, combined perhaps with some other causes, has reduced the reserve in the Bank, will be seen from the following figures:—

	Jan. 4, 1860.		Feb. 1, 1860.
	£		£
Notes in circulation	22,620,690	.....	22,690,459
Public deposits	9,159,556	.....	5,309,759
Other deposits.....	13,409,327	.....	14,484,676
Public securities	10,923,782	.....	10,171,190
Other securities	21,092,909	.....	20,773,681
Bullion	16,460,824	.....	14,942,502
Reserve.....	9,110,729	.....	7,511,162

The liabilities of the Bank, as will be seen from the table in our City article, are much larger than they were some years ago: in 1855 their private deposits were 10,583,727*l*, and they are now 14,484,676*l*. A larger reserve than used to be necessary is, therefore, absolutely required. The Bank did not act hastily in raising the rate; perhaps, indeed, they committed an error in not raising it a half per cent. on Thursday the 26th, but it is not possible always to determine such nice questions, and it is easy to be wise after the event. The rise in the value of money was a perfectly natural one, arising from the introduction of a new element into a very sensitive state of the market.

The rise from 2½ per cent. to 4 per cent., which may thus be accounted for, would not, however, have of itself caused any such feeling as we have seen during this week in the City. Four per cent. is not an extreme rate for the Bank minimum; and, though a rapid rise in the rate of discount is always a source of some slight anxiety, yet it might, and would in general have been easily borne when trade was acknowledged to be sound, when there was no rumour of speculation, when every one had long been complaining of quiescence, and when especially the resources of the Bank of England and of the discount houses were known to be ample for all present demands on them. Such has not, however, been the result; on one day in the week there was a degree of apprehension resembling, though by no means equalling, that felt in the panic of 1857, and on other days there has been anxiety and distrust.

The immediate cause of this remarkable state of feeling is the rule adopted by the Bank of England after the panic of 1857, of not making advances (except at certain seasons of the year), to the bill-broking firms in Lombard street. The Bank Directors acted on this rule on the present occasion, and, in consequence, the bill-brokers, "to keep "strong," as the phrase is, would hardly for some days discount for anybody; and it need hardly be added that a step so unusual on their part caused immediately a good deal of public apprehension. The monetary world has been much divided with respect to the conduct of the Bank, and we wish to make a few remarks upon it.

In the first place, we cannot but think it will be admitted that, if the rule of the Bank which excludes the bill-brokers from the Discount Office were ever to be acted on, this was a proper occasion for acting in it. There was no special signs of uneasiness in the money market: there has been, on the contrary, a prolonged calm. No one could complain that the rule was enforced at a period of exceptional difficulty,—for there was, and had long been, as we showed in the article to which we just now referred, a considerable accumulation of money in Lombard street. Unless, therefore, the rule of the Bank relating to the bill-brokers was to become an admitted dead letter, the Directors of the Bank were compelled on this occasion to enforce it; and, if they had not been prepared to do so, they must, for the sake of mere consistency, have abrogated the rule immediately.

What, then, is the reason for the rule? Is it or is it not in conformity with the acknowledged principles of judicious banking? The business of a banker, as is now generally admitted, is limited by the nature of the funds under his control; he is dealing with the money of others; a very large portion of such money,—in the case of the Bank of England the *whole* of its deposits, both public and private, are payable on demand. A banker, therefore, must keep under his control a certain amount of the means at his command, and must make no promises and incur no engagements which will render it likely that that reserve should be withdrawn from him.

He cannot, in consequence, undertake to make advances to every one, or unlimited advances to any one. The utmost he can say even to his own customers is, 'As 'long as I have the money, I will make to you such and 'such advances.' The amount of assistance each customer has to expect must be defined, if not with technical accuracy, yet within fair and reasonable limits. And to persons who are not his customers, a good banker incurs no obligation at all: he says, 'I will lend to you when it is 'convenient to me, and when it is not convenient to me I 'shall decline to do so.' What, then, is the position of the bill-broker with respect to the Bank of England? He is *not* its customer; he is its rival. In all ordinary times he borrows nothing from it, and keeps no deposits there. He has no occasion and no wish to do either. He employs his funds to a certain extent rightly and legitimately in competing with the Bank for the bills which are offered for discount; but although such is his business in all ordinary times, he wishes, we believe we may say he demands, to have the right of coming to the Bank and asking for advances *to an unlimited extent* in seasons of scarcity and on the first approach of pressure. We own that if such a demand were now made for the first time, we are sure it would scarcely be seriously considered. It is for the Bank of England to make defined advances to its own customers, and to enter into no obligations to other parties whatever. As the bill-brokers are the rivals of the Bank, they cannot reasonably expect that the Bank should act towards them with special and peculiar favour.

Nor is it advisable on public grounds that the Bank of England should in this case depart from the general rules of bankers. There are, on the contrary, two reasons which make their doing so in this case especially undesirable. One of these reasons relates to the business of the bill-brokers, and the other to that of the Bank itself. The bill-broker, like a banker, receives deposits—some of them on short notice, and some of them "at call," that is, on demand. He is, therefore, bound to keep a reserve in a tangible form, just as a banker is. If he does not do so, he runs a great risk, and cannot complain if he meets with a great calamity. The proper course for the bill-broker to pursue is to lengthen the duration of the notice, at the expiration of which the money left with him can be withdrawn; a less reserve would then be requisite; and, with respect to money at call, he is bound, like other money-lenders, to have large available funds to meet demands that may come upon him at any moment. There is no reason why an eminent bill-broker should depend on the Bank of England, any more than the London Joint Stock Bank or the London and Westminster Bank.

The second reason relates to the business of the Bank itself. It holds the bullion reserve of the country. This is its *national* function. So far, therefore, from its being its duty to make advances which other bankers would not think it wise to make under similar circumstances, its duty is of an opposite kind—is a duty of caution and prudence. If the Bank make excessive and injudicious advances, they may reduce their reserve far below its due amount, and we may have, in consequence, a panic like that of 1847 or that of 1857.

THE FRENCH TREATY AND THE BUDGET.

A Budget has rarely been brought forward under more unforeseen circumstances than that which Mr Gladstone will propose on Monday. A few weeks ago the closest observer would not have ventured to predict that a Budget, of which one of the difficulties must be an augmentation of the Army and Navy Estimates, would have also to provide for the *expense* of a treaty of commerce with France. A very little while ago we should have laughed at any one who anticipated that Lord Derby and Mr Fitzgerald would have opposed, upon the principles of free trade, a treaty negotiated by Mr Cobden and commended by Mr Bright; and we should have scarcely thought any one in his senses who would have told us that this same treaty would be also shaped and modified to suit the "constitutional forms" of France. Such, however, are the strange chances of political life, and we must meet them as we can.

The terms of the treaty with France are not yet made public, and we cannot, therefore, usefully discuss them in detail. The public wisely hold their judgment in suspense until they have the accurate facts before them, and then will be the proper time for us to offer whatever remarks we wish to make upon the subject.

All strange and unanticipated transactions must cause some amount of doubt and perplexity, and the suddenness of this one, and its very delicate character, must make it especially likely to do so. We cannot hope to remove these feelings. We do not wish to do so, for they are the proper feelings in the present state of the public information. But we think we may enumerate very shortly the principal points which should be looked for in the consideration of the subject.

First, we venture to hope that the Government will be able to show that they have not, as Mr Fitzgerald and Lord Derby suggest, departed from free-trade principles. The name of Mr Cobden is of itself almost a sufficient guarantee that they have acted correctly in this respect; and we showed last week, in a long article, that all commercial treaties are not necessarily reciprocity treaties, and therefore opposed to the now accepted principles of free trade. Still, we do not disguise from ourselves, and we would wish to point out to our readers, that the occasions on which a commercial treaty is desirable are exceedingly few,—that we should carefully scrutinise every treaty with that title,—and that we should not allow any statesman to hold out as the maxims of the English Government any but the purest and broadest free-trade maxims. We think that the conduct of the negotiators should be narrowly scrutinised in this respect, though we cannot but believe that it will be found, upon such scrutiny, not to be liable to just censure.

The next question is the one which occupies most the minds of men of business at the present moment. Is the free-trade proposal of the French Emperor a genuine, comprehensive and important proposal, or is it not? Is it to be to France what the first steps of Mr Huskisson and Sir R. Peel were to England, or is it a nugatory scheme? Is it a transient whim or a permanent policy? We are bound to examine very accurately the terms of the treaty with this question in our minds. The expressed opinions and public policy of Louis Napoleon are very changeable things, and it is only by them that we can regulate our actions. We need not care to explore the hidden recesses of an almost inexplicable character. We must look to the conditions of this treaty themselves,—we must see whether they are in themselves large, whether they seem to be the commencement of larger measures, or whether they seem to be intrinsically trifling, and to afford little prospect for the future. It is to be remembered, likewise, that the French Emperor may not always be as strong as he is now. We must take into the account the possibility of his being prevented from doing all he now intends to do. The French Protectionists may be more powerful a little while hence than they now are, though we may hope it may be otherwise. We must be careful what we are about. We are buying this treaty at a heavy cost to the public revenue, and we are bound to see that we get something that is worth having for our sacrifice.

Thirdly, and this is the point on which we feel most anxiety. We must ask how can we get rid of this treaty if it does not serve our purpose. If it prove nugatory, can we set ourselves free from it? Is it determinable by notice, or is it not? If we have bound ourselves for ever, for an indefinite, or for a long time, not to resort to certain modes of revenue, we shall have made a very costly bargain. At critical junctures in times of war, or of internal calamity, all *tolerable* modes of taxation are most precious. At any such times any endurable method of collecting revenue is an almost incalculable benefit. If we practically debar ourselves from resorting to such very tolerable and endurable taxes as the wine duties, we incur the risk of much anxiety, perplexity, and national poverty hereafter. In this respect we own that we feel considerable anxiety. We frankly own that Mr Cobden's name is not so perfect a guarantee on this point, as on all other points of such a treaty as this. We fear that he does not value at their proper rate the sources of the public revenue. At least we *know* that he does not value them as highly as we do, or as men of business in general do. He anticipates so large a reduction in the public expenditure as will almost enable us to spare *any* tax. We wish we could agree with him, but we cannot do so. We fear that he may not have estimated sufficiently highly the danger to the revenue, not only now

but at difficult times hereafter, of parting with tolerable sources of revenue. He is so much opposed to indirect taxation, that we can almost fancy he would be glad to be rid of any kind of indirect tax under any circumstances, and come what may.

With respect to the Budget, it is useless to prognosticate what will be so soon known. But it is evident that the immediate consequences of the treaty with France will absorb ultimately, if not immediately, much of the relief we have so long anticipated from the cessation of the Long Annuities, and that we can no longer expect a diminution of the income tax, or of our indirect taxes, from that source. We have frequently pointed out that the great bulk of our Customs revenue is paid by a very few articles, and that the great mass of the articles enumerated in our tariff contribute but a petty fraction in comparison. We should, under other circumstances, have expected Mr Gladstone to make a considerable clearance of petty duties; and, though his resources are materially restricted, we almost venture to hope for it still.

THE BREACH BETWEEN THE EMPEROR AND THE POPE AND ITS RESULTS.

The suppression of the *Univers* will ever mark a critical era in the second Bonapartist Empire; and we must avow our conviction that, if the anti-Papal policy which has dictated this measure be boldly persisted in, it will be a better guarantee of a good understanding with England than even common action in favour of the principles of commercial freedom. Both the blow to Protection, and the blow to Papal interference in France, have indeed been struck without any appeal to the nation, or any indisputable evidence of popular approval. Neither the one nor the other is the yield of public opinion legitimately consulted. In both cases alike, the Emperor has arrogated to himself the task of acting as the organ of France, and though in both cases alike he has decided the question rightly on its merits, he may very likely have decided both questions in a manner which would find no triumphant support from the present state of national opinion. But in the present form of the French constitution, the principle that even a misjudging *self*-government is superior to a right-judging system of dictation has been deliberately rejected. It is assumed, once for all, that when the Government sees the popular mind deviating widely from its own standard of wisdom and right, it ought to guide, restrain, and even suppress. The assumption that public conviction ought to precede distinctly governmental action is denied. On the contrary, Government undertakes, to some extent, to form public conviction by its acts,—to warn it of its errors,—to resist its misdirected impulses.

Hence all the enlightenment of the French Government is apt to take a despotic and didactic shape. The Emperor does not even consult his Council about free trade in France, but gives effect to Mr Cobden's views, in his treaty with England, with the imperative fiat of a Russian Czar, instead of after such a prolonged agitation as that of the Anti-Corn Law League. He does not ask any one's advice in his conflict with the Pope, but warns and suppresses the *Univers* with far less appearance of irritation than England showed on occasion of the famous Papal aggression. He is content, if he has just enough opinion on his own side to hold in check the opinion that is hostile to him;—he decides *for* the country he rules, and often in a manner not in accordance with its principles. England cannot and ought not to be expected to approve of this. We cannot be expected to approve such peremptory acts as the prohibition of the publication of Ultramontane opinions, and the repeal of a system of monopoly without the country's initiative. But thus much we may say, that if a despotic Government is to throw its weight into one scale or the other, it is probably better that it should throw it into the right scale than into the wrong. If the Imperial Government were to give its unqualified support to a system of monopoly, not only would the material interests of the country be injured, but every year the wholesome influences of other nations upon it would be diminished. If it were to give its unqualified support to a sacerdotal rule, not only would the political government of the country be injured, but there is danger that the germs of political wisdom might be destroyed altogether. And it is a mistake to suppose that France could, on her present system of government, adopt a neutral course. The monopolistic system now to be superseded was as arbitrary, as little the fair decision of the national will, as the free-trade system which follows it. While the *Univers* was petted by the Government, the Ultramontane party had as much the advantage as the Gallican party will now obtain. Under such a system, no Government can be impartial, because it has no test by which to be guided but its own bias and will. It is probably better, therefore, it should be peremptorily right than peremptorily wrong.

With these qualifications,—while always maintaining that it were far better for the people of France to be supporting all sort of evils, economical, ecclesiastical, and political, in the mere ignorance and inexperience of self-government, than to be led thus passively by even so astute a statesman as Louis Napoleon,—we may be allowed to rejoice that his Government has taken a definitive part against the Papal party in the Church instead of with it. It is, we believe, the great crisis in the history of the second Empire. For the Emperor, choosing as he does to be entirely independent of the views of his own subjects, cannot yet work effectually without a certain share of external approval to support him. His uncle, indeed, never depended much on anything but force of arms. He seldom had any important allies who were not his allies only because they feared to be his enemies. But the present Emperor cannot work mainly by the aid of armies and military power. He has always shown himself very sensitive to the drift of European opinion, and when he cuts himself off from the goodwill of one great Power, it always turns out that he has secured the goodwill of another even more important. Without the understanding with Russia, he would never have gone into the Italian campaign; without the encouragement of England, he would never have modified the stipulations of Villafranca. If, then, he is now willing to brave the anger of the Pope, we may be sure that he intends to work to the utmost the advantage of a cordial understanding with those Powers who most abhor Ultramontane politics. The Emperor of the French never wastes a step of this kind. In his resistance to the priesthood, he knows that he encounters a formidable power, as well as in his resistance to the Protectionists. The natural counterweight to such a loss of strength is cordial unity with England and North Italy, and all Powers which adhere to the same principles. And, insomuch as the Papal power is greater, more subtle, more lasting, more unscrupulous, and more fertile in its resources than the Protectionist power, so far will that policy of opposition to Rome which the Government of France is now entering upon, be more likely to render an English support permanently important and even necessary for France, than even the opposition to a policy of monopoly. The latter is a comparatively insignificant, though a noisy and furious, interest. Its influence cannot outlast the first shock of the change to free trade. But the Pope, once turned into an enemy, the 40,000 clergy who are more or less under his influence, and the vast numbers of the French population who are more or less under their influence, will be a permanent anxiety to the French Government, and a permanent reason for seeking all the aid in French and European opinion which a cordial adherence to liberal tendencies will give.

And though, therefore, we would much rather have seen an assimilation of French and English political convictions begin with an enlargement of the scope of free discussion, than in an arbitrary check even to Papal interference, we have some hope that if this policy be fairly persevered in, it may end where it might better, perhaps, have begun. If the Government of France appeals to the liberal spirit of French science and economy, and to the hearty support of Sardinia and England, then it cannot be entirely proof against the influence of the practical example of these countries on the constitutional forms of France.

The Emperor, who, after ten years' rule, has found himself strong enough to dispense with the support of the French hierarchy, may find out before ten years more have elapsed that he needs the only support which can effectually neutralise the influence of a united hierarchy,—some *organic* expression of the independent thought and feeling of the country. In this way, we think it is not unreasonable to expect that the breach between the Papacy and the Emperor may end in the concession of something more like constitutionalism than would have been likely so long as the Roman power and the French Government were at one.

PIEDMONT, FRANCE, AND SAVOY.

No one, we suppose, is surprised to find that France did not make war merely "for an idea," but with a substantial gain in view, which, if not very rich in apparent value, has an ideal value of its own, inasmuch as it is the gain of a step towards having a "natural boundary" for France,—an aspiration which has always haunted the house of Bonaparte,—and the legitimate consequences of which would involve an extension to the Rhine. No one is surprised, and, of course, no one is much pleased. But we think the true proportions of the Savoy question are somewhat misunderstood by the English press in general. We are inclined to doubt the very large importance of the question from the European point of view,—the balance of power point of view. We do not think it can be much overrated from the Savoyard point of view,—the point of view of the inhabitants whose transfer to another rule is contemplated.

With regard to the European point of view, we do not believe that the possession of the Savoy mountains would greatly increase the power of France over Italy. Whether for friendly or hostile purposes, the Gulf of Genoa is probably now the most eligible pathway to Italy for a Power so great on the sea as France. She has been near enough for a long time to domineer a good deal over Sardinia, had she been so disposed. But she has found a better opportunity in Rome, which is far off, than in Turin, which is close at hand. The truth is, distance makes little difference to such a Power as France,—it is broad opportunity, not highways, which give her an advantage. And opportunities will in a thousand ways be lessened, instead of increased, by the union of all the lesser States of North Italy under one strong Central Government. The counterpoise against French influence will be far more powerfully increased by the union under Sardinia, than it can possibly be diminished by the addition of Savoy,—or even of Savoy and Nice,—to France. It is in weak and divided States that foreign Powers obtain an undue power of interference. Sardinia, after her accessions,—especially if Venetia be added to Lombardy, which is hinted at,—ought to be, and we trust will be, a powerful and united kingdom. We may well hope that Savoy is but as a grain in the French balance, as compared with Central Italy in the Sardinian.

The objection, that to concede anything to the "natural "boundary" aspirations of the Bonapartes is to excite the fears of numberless Germans and to whet the appetite of France, is more important. And even if Savoy were to be annexed to France, this ground ought to be formally repudiated by all the great Powers as untenable, dangerous, and in every way inadmissible. But this objection touches only the "consideration" alleged for the act of concession, not the results of that act itself.

But when we turn from the exterior view of the matter to the interior view of it, there seems to us to be a much graver question involved. Transfer should imply property, or a power to transfer; and it is scarcely necessary to observe that neither had France, at the time of the treaty of Villafranca, any property in the millions of Lombardy, nor has Sardinia any such property in the sparse population of Savoy. It would be an anomaly not unlike the act of a member of Parliament who should attempt arbitrarily to transfer his constituency to the care of another,—and of one, moreover, who had already paraded his contempt for any conscientious discharge of the duties of a representative,—if Sardinia were to transfer her Savoy subjects to the care of France without consent of their's. Nor do we apprehend that anything of the kind will be attempted. The Emperor of the French has always shown an exceptional respect for the constitutional form of polling populations *en masse*. And we have little doubt that, if an eager desire for Savoy is felt by the Government of France, the means are preparing for doing all that is possible to attain a favourable verdict from the masses of the people.

But it is extremely important that England should use her utmost efforts to see not only that such a question is fairly submitted to the people of Savoy, but that it is submitted to them without any influences likely to bias their judgment. The Chambery meeting seems to have been, in spite of the misrepresentations of the French papers, really important and unanimously loyal to the Piedmontese Government. The address there adopted says:—"We declare our respect, "our love, and national fidelity to the loyal and chivalrous "Victor Emmanuel II. We are resolved to remain free "under the constitutional charter which the magnanimous "Charles Albert gave to the nation;" and we are told that the reply read by the Governor from a Turin despatch, that "the Government never entertained the idea of ceding "Savoy to France," was received with a real burst of popular enthusiasm. If this be a true report of what occurred at Chambery, there seems good reason to admit a deep vein of conservative loyalty in Savoy. Whether that feeling exist or not,—it would ill become England, after a long and faithful defence of the principle of non-interference with the will of the populations of Central Italy, to permit any tampering with the will of the people of Savoy, merely because the country is so poor and small. It is worse to wrench away a contented country from its natural government, than to impede the formation of a natural government in a disturbed and discontented country. In the one case you are destroying a rightful and existing social order,—in the other, you are only impeding an experiment,—very hopeful possibly, but still an experiment for the future. If it is a political crime to veto Tuscany's desire to try annexation to Sardinia,—it is a worse political crime to sever violently the attachment of Savoy to its constitution and monarch. There are not too many well-satisfied nations on the continent of Europe. If Savoy be one of them, let us do all in our power to enable her to hold her place. And in any case let our Ministry insist on fair play; let us have every guarantee that the population are consulted fairly, and not bribed or menaced into the arms of France. If Savoy wishes to belong to France, we see no European reason against it. If she does not, we see in any attempt to force her inclination a political crime of the deepest dye.

MR WISE'S COMMITTEE.

Mr Wise has carried his motion for the appointment of an annual Committee to inquire into the Miscellaneous Civil Service Expenditure of the preceding year,—of the expenditure in Woods and Forests and Land Revenue,—and of the money paid out of the Consolidated Fund. That the object contemplated by Mr Wise and Mr Bright,—to put a stop to this constant increase in these items is a legitimate one, we have often urged. As to the proposed machinery we have many doubts. To review the year's expenditure on the Miscellaneous Civil Service alone, with any practical result, is more than a Committee of the House can probably accomplish in any session. They must hear and sift over again all the evidence which has induced the various departments to sanction such expenditure. And a Committee will do this, of course, much more slowly than the departments. They will have much less previous knowledge; they will have to ask many questions, where men accustomed to the department need only to ask few; and they will be in danger of condemning or sanctioning at hazard.

The fault, we believe, is rather the fault of the House of Commons itself than of the Government. When Chancellors of the Exchequer and Secretaries to the Treasury resist and remonstrate against a fresh expense proposed by any member of the House, the House in a generous and impatient humour frequently overrides their decision. When, for example, the civil servants whose superannuation allowances were paid by deduction from their annual salaries, made a great effort to get these allowances without any such deductions, and the Government resisted the demand, the House insisted and carried the day against the Government; and then, a free present of their superannuations having been thus made to the civil servants in a certain limited class of departments, it became necessary as a matter of justice to grant them also to servants in the other departments. Would the Committee proposed have prevented a movement of this kind? The House, not the Government, were bent on generosity, and the anxious economy of the Government was overruled. If the members themselves can be persuaded to take to heart the duty of economy, and to resist applications from their constituents to apply for grants of public money,—or if the constituencies can be persuaded not to use their influence over their representatives for this purpose,—then and then

only, we might hope for a gradual reduction, instead of a constant increase, in these grants and estimates.

Whatever be the merit of the remedy proposed, the threatening character of the evil cannot for a moment be doubted. If we were to go only so far back as 1854,—the year in which the Miscellaneous Civil Service Estimates were apparently increased by about 1,500,000*l* which had been transferred to them from the Consolidated Fund,—we should see plain traces of this increase. It will be best, however, to exhibit the increase of the last ten years, and in order to avoid any unfairness to the years since 1853, we will diminish the estimates since that year by the amount transferred in 1853 from the Consolidated Fund.

MISCELLANEOUS CIVIL SERVICE ESTIMATES.

	£				
1849...	3,988,904				
1850...	4,065,642				
1851...	3,948,102				
1852...	4,407,754				
1853...	4,802,318				
1854...	5,148,522	when diminished by a million and a half, then transferred.			
1855...	5,086,062	—	—	—	—
1856...	5,224,250	—	—	—	—
1857...	5,895,333	—	—	—	—
1858...	5,739,795	—	—	—	—

So that during the ten years there has been sometimes a little regress, then a greater move forward, till on the whole the advance has been one of about 1,750,000*l*, or much nearer a-half than one-third of the original sum voted for these purposes. The increase is nearly half of it attributable to "Edu- "cation, Science, and Art." In the year 1849, the sum voted was only 398,189*l* for these purposes; in 1858, it was 1,126,307*l*,—the increase being 728,118*l*; and in 1859 the sum was yet larger. In the department of Law and Justice the expenditure in 1849 is 1,196,814*l*, and in 1858 it appears to be 2,462,472*l*. Of this enormous increase, however, a great deal is attributable to the cause above named,—the removal in 1853 of certain charges from the Consolidated Fund. Still, after allowing for this, Mr Laing, the Secretary to the Treasury, admits that the increase in this department is about 500,000*l*. The other increases are in telegraphs, harbours of refuge, and expenses of this class, which the House of Commons are always eager to press upon the Government, and the Government generally very reluctant to accept.

We doubt, then, whether the disease Mr Wise justly complains of does not lie deeper than any Committee can reach. But if, as Mr Bright suggests, it should prove that the authority of this Committee becomes a practical terror to members anxious to promote expenditure, and exerts an influence similar in kind to that of the late Mr Hume, none will rejoice more heartily in its appointment than ourselves.

MARITIME LAW.

TO THE RIGHT HONOURABLE LORD JOHN RUSSELL, M.P., HER MAJESTY'S PRINCIPAL SECRETARY OF STATE FOR FOREIGN AFFAIRS.

The Memorial of the undersigned Bankers, Merchants, and others, Residents in Saint John, New Brunswick,

Showeth,—That your memorialists beg to call your attention to the peculiar hardships to which all commercial persons, who have property in any shape upon the ocean, are exposed in time of war, with a view to obtain a consideration, at the approaching Congress, of the question of the inviolability of private property at sea, in order that the international law may be so modified, that the unoffending navigator, and the property in his charge, may not in the course of a legitimate voyage be subject to capture.

That the vast extension of commerce, and its ramifications by a system of credits through all nations, during the last half century, has increased, in a corresponding degree, the extent of suffering which would be inflicted if the severities of former warfare were enforced among maritime nations, and no experience of past wars can enable any one to define the limits of the injuries that would be caused, or the parties upon whom these would fall.

The approaching Congress seems to your memorialists to be a peculiarly fitting occasion for the consideration of this question; because the minds of people in Europe are now awakened to its importance, and to the injustice and barbarity of the international law in its present state; in evidence whereof your memorialists beg to call your Lordship's attention to the proceedings of a large meeting of the citizens of Bremen, held on the 2nd ultimo, advocating such a change as they now seek to obtain, and particularly to the opinion of the present Emperor of the French as evinced by the Treaty of Zurich, whereby he surrendered to the Austrians the vessels that had been captured by the French cruisers during the late war, "in order," as expressed in the words of the Treaty of Peace, "to attenuate the evils of war."

Your memorialists submit that the law, in its present state, is inhuman, impolitic, and utterly at variance not only with all practical Christianity, but likewise with the improved spirit of civilisation, and that it is, in fact, a relic of the piratical usages of the darkest and most cruel ages of the world.

Your memorialists submit that Great Britain, from her naval superiority, is the fittest power to originate the consideration of the proposed alteration, and at the same time, from the enormous extent of her commerce compared with that of any other European nation, she, beyond all others, would obtain the greatest benefits.

Your memorialists submit that an alteration is imperatively called for, because the enforcement of the existing law by Great Britain against any hostile maritime nation would, on account of the great extension and the innumerable ramifications of commerce, be certain to involve her in war with nations otherwise amicable, on the sole ground of the manifest injustice of its operation.

Your memorialists, therefore, humbly pray that your Lordship will be pleased to take such steps as may seem, in your Lordship's opinion, to be necessary to bring about such an alteration as they have indicated.

January 2nd, 1860.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

(FROM A CORRESPONDENT.)

V.

(CONCLUDED FROM JAN. 28.)

THE more important Statistics of the extent of crime in England and Wales, when estimated for a single year, have now been placed before the reader. These Statistics include most details of the positive amount of criminality, and many details of the proportionate extent. The returns furnished by the Police Establishment have been arranged so as to indicate the actual numbers of the criminal class, independent of all considerations of locality, population, or employment. The same results have also been calculated with reference to these conditions: and the aspect of crime has been viewed, positively, as existent in certain defined districts; proportionately, in relation to the numbers of the inhabitants; and with reference to any prevailing characteristic of the population, in its different phases, of town and country life, of mercantile, maritime, agricultural, or commercial occupations. These Statistics have been produced, more or less fully, for the whole of England, for the urban and rural Police Districts, for certain agricultural counties, and for several of the larger and more important centres of industrial employment. And to such returns—calculated as they have been, in most instances, without any distinction of sex, age, or antecedents—have been added the most minute details of the characters of the recognised criminal population, statements of the proportion of adult to juvenile delinquents, and tabulated divisions of males from females.

Such details having been stated, the chief object of the present series of letters has been attained. The object proposed, was to place upon record, in a form in which it might be read, and in a position in which it must be seen, the alarming disclosures which the recently published volume of Judicial Statistics, for the first time, bring to light. The mass of information which that portly Blue-book has produced, has, in these letters, been condensed within such limits, which those interested in the subject will, perhaps, consider to be readable; and this summary has been published under circumstances which ensure—at the least—a wide circulation. Hence the more important object with which these criminal returns have been compiled, has been fully realised; and those whose duty and profession it is, either to regulate the conduct of that class which is now proved to exist, or to propose measures for such regulation, are, or may be made, aware of the actual condition of that fearful social malady with which they have to deal. The subscription to these letters, then, has been, up to the present point, literally adhered to—an inquiry has alone been instituted upon the extent of crime in England and Wales. Neither, in effect, will the spirit of the signature be ignored in what remains to be said. The least important portion of the subject has now, in conclusion, to be discussed: and this part will assume—with much diffidence, as dealing with an extremely difficult, though a highly momentous, subject—the form of an inquiry, as to what means we possess for the supervision of the criminal class in this country, and what means we might employ.

The agents and instruments for the diminution of crime in

England, if to the public acts of legislature be added the influence of private energy, probably exceed in extent, if not in efficiency, the appliances for similar purposes possessed by any other civilised country. In addition to the untiring efforts of private individuals, of associated societies, and of bodies which are public to all but a national extent, the kingdom in general, by means of both its legislative and executive departments, has of late years devoted itself to the question of the regulation of the criminal population to an unprecedented extent. Neither have these efforts been confined to any section of crime, to any age, or to either sex, of our "dangerous classes." Education, with an unsparing, if not always with a judicious hand, has been forced upon every portion of society:—and this method of reducing crime has taken almost every conceivable shape of day schools and night schools; ragged, reformatory, and industrial schools; evening classes; lectures; reading rooms; and mechanics' institutes. Homes and model lodging houses have been established to help persons, by various inducements, to keep free from crime: and refuges, penitentiaries, and prisoners' aid societies, to assist them to return to an honest course of conduct when they have fallen into wickedness. Our prison system has been changed—and not only altered, but improved—step by step, until, *as far as it goes*, the English system of convict management leaves little to be desired. The crying evils and abuses of transportation have been abolished; the hulk abomination has become a matter of history; the iniquities in our home dépôts have ceased; and the more rational treatment of convicts, as responsible beings and Christian men, with the needful adjuncts of separate confinement, associated labour, and the general organisation of a model prison, conducted on scientific principles, has eventually triumphed. Nor is this all. The subject of crime, in many of its varied aspects, has over, and over, and over again, attracted the attention of Parliament. Acts have been passed, and have been repealed. Committees of both Houses have sat, examined, consulted, and issued reports. The Executive has been warned, advised, and has become the subject of memoranda issued from the highest quarters. The penal code has been amended, and the consequent condition of the liberation of prisoners has been changed; and both have been altered without being improved. And, lastly, there has been lately established, throughout the country, a Constabulary Force—and one which, even in its infancy, has proved itself to be something more decidedly beneficial than a hopeful organisation.

Such are, in brief, a few of the means and appliances in our possession for the suppression and regulation of our criminal classes. And how have we employed them? Let the reply of one who has thought much and deeply upon the subject, when requested to state the more important measures of criminal legislation which had been adopted to meet our anomalous position consequent upon a cessation of transportation, be a sufficient answer. More meat, he said, had been issued to the prisoners, beer was supplied to them, and their allowance of suet pudding had been increased.* And this, in truth, is almost the limit of our positive arrangements to counteract the results which arose when the country ceased to possess a colonial outlet for its penal population. For our criminal policy—if that can be called policy, which owe its existence less to principle than to accident—has, of late years, been characterised by indecision and vacillation. To a great extent, it has been founded in expediency; and, instead of progressing with further light and enlarged experience, it has, in some respects, positively retrograded. It is true that select committees have reported on the evidence of men best fitted to give advice; but such reports have systematically, and on points of no small importance, been ignored. It is true that all competent authorities unite in declaring that short sentences are the bane of society, and the moral destruction of the criminal; yet lengthened sentences are very greatly in the minority in the official returns of both. Recent legislation has certainly ensured a diminution in the cost of prosecutions; but the practical working of the "Criminal Justice Act" is to diminish the expense of judicial proceedings by the increased number of committals; and its results, every year more and more apparent, are to offer a premium to the culprit, by pleading guilty, to ensure a speedy return to his professional employment. A ticket of license system has been established; has been reported favourably upon by the official to whom was intrusted its practical working; has been openly and notoriously abused, by those whose duty it was to enforce it; and has eventually, and in practice, been discontinued by the same authority which gave it birth. And this system, admirable in its conception, has been rendered useless by a deliberate renunciation of the essence of its principles, and has been intermitted, not only without just reason, but against all sound argument. Lastly, our recently established Police Force bids fair to stultify its office. Instituted amidst considerable opposition, it seems destined to have been established only to become a costly burden and a cumbrous hindrance. Great efficiency can alone redeem, from the charge of extravagance, so expensive an institution; and an annual outlay of nearly one million and a half does not compensate for services which are so scanty, but which might become of so much value.

* Against this alteration, the late Rev. J. Clay, Chaplain of Preston Gaol, and no mean authority on a question of prison management, raised an emphatic protest.

Let us examine this matter a little more closely. It is fully and freely admitted that the Police have performed the duties intrusted to them in a manner, not only creditable to themselves, but in one which left little to be desired. It is entirely owing to this Force that we now possess the valuable information upon our criminal population of which we are assured. We have had mapped out for us a sketch of that portion of the community which makes antagonism to the laws its vocation. The boundaries and limits of the criminal area have, it is true, only been dotted out. We know not its extreme dimensions, and we cannot say on what side the neutral ground is most invaded. Beyond the assurance that we are inflicted with a criminal class of enormous proportions, we can definitely state below what figure the estimate does not fall. But if our information of the maximum of crime is incomplete, the details of the minimum are full, almost to complexity. The foregoing Statistics bear out this assertion, and present the minutiæ of crime under a large variety of combinations. All this labour was effected by the Police Establishment; and no one who considers the subject will assert, that such labour was insignificant. But when the Police have done this—as far as they act as preventative agents to crime—they have done all. They may, and it forms a part of their duty to, apprehend those who, on any particular occasion, are pointed out to them as positive law-breakers. But previous to any such overt act, on the part even of acknowledged and professional delinquents, the Police are utterly powerless for good or evil. They are surrounded by an atmosphere of crime to the frightful extent of 135,000 persons who avowedly make criminality a calling. Every member of this pitiable class is individually known to the Police of the district he inhabits. They can describe him minutely. They can state of what age the culprit is; what the sex; and what the antecedents. Oftentimes he is personally acquainted with the ministers of justice, and by name; and the professional criminal may be seen issuing from his quarters, and prepared for his foray against society, recognising his official guardian with a nod, half defiant and half familiar. Yet not one single step can the Police take to prevent, that which it is their duty to assist to punish when committed. Although a member of the criminal class; although unable to obtain a character denominated "good"; although one who exists "without visible means of subsistence"; although known to be a "suspected person"; although an acknowledged and recognisedly "known thief," living on his ill-gotten gains and only waiting for fresh needs to rob afresh, yet the Police are entirely incapacitated to restrain the career which only fails to be detected. Thus we employ 20,000 men, and pay them annually 1,500,000*l*—not to prevent crime being committed; not to preserve the peace; not to restrain the rapidly-increasing criminal class; not for any preventative measures whatever; but merely that they may act the part—more effectively perhaps, but still the part—of the old-fashioned country constable, and apprehend those who are specially accused of any specified offence.

It can hardly be conceived that in a nation, in the characteristics of which common sense bears so conspicuous a part, that so suicidal a policy can be allowed, for any length of time, to continue unchecked. All classes of thoughtful persons are conscious of this anomaly in our Police system: and it is believed that no body of men more deplore their want of power than the Police themselves. Now that we are acquainted with an approximation to the numbers of our criminal class, now that we possess a large body of intelligent men to deal with this class, it does seem little short of political madness to neglect those means of self-preservation which the nature of the case immediately suggests. At present, the Police Establishment completely stultifies the object of its existence, which is not, primarily—and this cannot be too strongly insisted upon—to apprehend crime committed, but to prevent crime prospective. As far as the means within our reach enable us to effect this end, it can be done in but one single manner—by breaking up, and by dispersing the avowedly professional class of habitual offenders, which subsists only by preying upon society. No other plan possesses the slightest chance of permanent success. Industrial education may teach. Religion may train. Refuges may receive. Penitentiaries may reform. Pains and penalties may deter. A Police Force may capture, and the goals may incarcerate, and for a time suspend the operations of, individual depredators—but all in vain. Neither prisons, nor Police, nor punishments, nor penitentiaries, nor refuges, nor education—and Religion is out of the question, in such cases—will at all avail, so long as there exists, contemporaneous with a population which respects the laws, a class of society which, with all the nonchalance of professional right, systematically and openly sets all laws, human and Divine, at defiance.

This, then, is the point to which it was desired to bring the argument, which rests upon the truth of the assertion, that the only practicable way of reducing the extent of crime in England and Wales, is to break up, and forcibly to disperse its criminal class. And how may this be effected? The conclusion of this letter will be devoted to the consideration of a plan—or rather of its outline—which can hardly fail to accomplish this desirable end, and which possesses this antecedent quality in its favour, that it merely employs measures which already exist, and means which are absolutely ready for immediate use.

Before, however, this plan is submitted for consideration, a glance at matters as they now arrange themselves will tend to obviate certain objections. Our present position, with regard to the criminal classes at large, is strictly one of non-intervention. It cannot be too often repeated, or too widely known, that from the month of January in the present year, convict prisoners have been, and are being, discharged from the Government gaols, at periods more or less short of their original sentence, without the slightest supervision affecting them. This course has been taken in consequence of the circulation of a Home Office memorandum, based upon the Penal Servitude Act of 1857. In the words of this circular, "It is not intended generally to exercise" the power of supervision "in the case of the remission of a portion of the sentence, &c." And the practical working of the measure will be, that by the close of the year, should such calamitous policy be allowed to continue in action, several hundreds of all classes of convicts will have returned to the ranks of their former associates, relieved of a considerable portion of their original sentence, if fortified only by that least reliable of all safeguards, a good prison character. As time goes on, the entire present population of the gaols will be emptied upon society; and reprieved murderers, men guilty of homicide, forgers, felons, burglars, highwaymen, thieves, and all the less important, but not less mischievous, members of the criminal class will be once more at large; and unchecked, even by the appearance of supervision, will be at liberty to recommence their lawless life of depredation. Such a state of things—unrelieved by the filtering process of transportation—must inevitably, and sooner or later, produce a very serious social upheaving in this country. It is impossible it can be otherwise. Under such encouragements, crime must continue to—and perhaps more speedily than at present, will rapidly—increase. What else can be anticipated? Under the present *regime*, a criminal has only to conduct himself discreetly whilst in confinement, to obtain a remission of his sentence of portions varying from one-sixth to one-third of the whole term. Not unfrequently the worst, and the most hardened of their class possess sufficient self-control to earn the best prison character. Nothing can, in this case, prevent their mixing again with their fellows, at the shortest possible period allowed by law; nor their being considered, in all respects, innocent and harmless members of society. Although sentenced to seven, ten, or fifteen years' penal servitude, the felon will be detained under the grasp of the law but 5 years and 3 months, 7 years and 6 months, or 10 years, respectively, and will then be unconditionally discharged. For the remaining 5 years, 2½ years, and 1¾ years, the criminal is left to his own devices. Notwithstanding that he is sentenced for far longer periods, from the date of his discharge, no one is responsible for him. With a clean bill of health from the gaol authorities, he cannot be detained the full term of his original sentence—and hence the convict establishment is not responsible for him. As discharged from gaol, and with no warrant issued against him, although associating with known thieves and depredators, he is a free man—and the police force is not responsible for him. Neither, again, is society responsible for the outcast, even if desirous to amend; the fact of having been a convict earns for him, rightly or wrongly, the hated title of "ticket of leave" man; and the fact of his bearing the designation of "ticket of leave," ensures his rejection from that class which dubs itself respectable. Thus the present enlightened system periodically empties our gaols of their most hardened inmates, provides not the slightest check upon them when liberated, expects them to be innocuously absorbed amongst a population which already reeks of crime, and then is astonished that 135,000 members of the criminal class at large exist, and wonders why crime in England and Wales does not decrease.

Even at the risk of entrenching on the space left for the discussion of the system which does not yet obtain in England, it has been thought advisable to point out, in colours very far from being exaggerated, the crying evils of the system which now disgraces our criminal jurisprudence. From what has been said, it will probably be obvious that, in the opinion of the writer, one great means of breaking up the criminal class is the adoption of that system of convict management in which the terms "conditional liberation," and the "registration of criminals," are household words. In most of the civilised countries of Europe this system prevails with much advantage. But we need not look for examples beyond the limits of the Empire. In Ireland,* "conditional liberation" has now stood the test of years, with the most unhoped-for and complete success. Under the provisions of this system, prisoners discharged before the termination of their original sentence are placed under the supervision and protection—for it becomes a protection—of the police until the expiration of such sentence. The slightest irregularity—far short of an actual offence—ensures re-incarceration; whilst real endeavours after an honest livelihood produces corresponding support. If to the Irish system, with its "Intermediate Establishment" before release, and its "Criminal Registration" after, practical effect were given to the resolutions of the Committee of the House of Commons of 1856; and if to this were added such an amendment of our Criminal Code, whereby short sentences for habitual offenders ceased, and a repeated misdemeanour on the part of a liberated convict were visited with a term of imprisonment of not less than five or seven years' duration, it is morally impossible that, with our present prison management, and our recently appointed Police Establishment, the criminal class could fail to be broken up, and the extent of crime in England and Wales could fail to be sensibly diminished.

Agriculture.

AGRICULTURE IN FRANCE.

THE prospect recently opened to the French cultivators of eventual emancipation from "protection" gives additional interest to all that relates to agriculture in France. There, the question of monopoly or free trade assumes a form directly the converse of its shape in this country. Here, the proprietors wished to secure a monopoly of food, and based their hopes of prosperity on compelling the manufacturing and artisan population to buy their food at prices artificially enhanced; there, the manufacturers claim to monopolise the supplies of all manufactured articles, while the agriculturists desire freedom of trade. We, however, have outgrown these prejudices, having set our trade and our minds at once free; for it was satisfactory to note at the opening of the present session of Parliament, that the speakers who expressed the most nervous apprehensions a breach of the strict rules of free trade and political economy might be made in treating with France in reference to import duties, were precisely those who stood out stoutest and longest against free trade in corn and cattle in this country. And now the Emperor of the French has announced his determination to afford to French agriculturists some relaxation of monopoly of manufactured products, and of iron and coal, by which the French farmers have been so grievously wronged. This will enable them to help themselves in the most effectual manner. But the Emperor is himself setting a most excellent example of the way in which French agriculture is capable of being developed, by the large operations in husbandry which he has undertaken on the Imperial domains. And we must not estimate the importance of Government example in such matters in France, by our own notions on the subject. We should expect any Government farming or land improvement to end in a job, or to fail until the undertaking had been handed over to private enterprise; but in France the people look to the Government for leadership and direction in numerous affairs which we more justly regard as quite beyond the functions of Government. The efforts of the Emperor to promote the improvement of land and to introduce high farming have, therefore, far greater significance in France than anything of the sort by the Crown or the Government could have with us.

We have on several occasions noticed accounts of French husbandry which have appeared in the *North British Agriculturist*, where very abundant details have been given. Amongst others we noticed, in September last, an account of a dairy farm the Emperor has formed on the Imperial domain at Vincennes, where he has also formed a public park; on the latter no less than 80,000*l* have been expended. The farm itself has been reclaimed from a sandy sheepwalk, and model buildings erected at the cost of 6,000*l*. This capital is said to have been well and judiciously expended, and the whole of the establishment, as our readers will recollect, is admirably managed. The produce of the farm—milk—is conveyed to Paris and there sold.

At Chalons, a district of chalk, in proximity to the camp, there are several farms of considerable extent, which have been purchased at 5*l* per acre, about double the real value. These are cultivated very much on the system pursued by the farmers of the district, with such improvements as capable agriculturists would adopt. The grain grown is chiefly oats, the proportions of all the farms under that crop being very large; but, as the manure from the camp is brought to the farms, this can be profitably done. The sewage of the camp is also brought to the farms. There are from 3,000 to 4,000 horses and sometimes 40,000 men at the camp, and, in addition to the manure from that source, from 40 to 50 tons of Peruvian guano and other portable manures are used. Reclaiming is still going on, and ultimately it is intended that the cultivated land of each farm shall range from 500 to 640 acres. The forage green crops on each farm will then vary from 120 to 250 acres. The exercising grounds will be used as sheep and cattle pastures. The stock of each farm, when completed, is to consist of eight farm horses, 80 dairy cattle, 500 wethers, 500 ewes, and from 30 to 40 tups of different ages. Besides keeping this stock, it is estimated that a good many oats can be sold from each farm to the camp. The cattle will consist of the Bretagne breed, to be replaced by larger kinds as the land improves. The sheep are Merino-Champeigne, and it is calculated they will be maintained on the pastures from seven to eight months annually without any house feeding. In the winter the stock will be reduced by about one-half. Cattle and sheep are to be fattened.

The system of the district is also adopted as to the management of the farm labourers. The wife of the farm manager on each farm undertakes the boarding of all the servants, for which she

receives for each person at the rate of about 20*l* annually, and half a litre of milk per day is allowed for each. The manager is allowed 8 francs a month for each servant's bedding, the beds being furnished by the employer. The men have for breakfast, between 4 and 5 in the morning, coffee, milk, and wheaten bread; at mid-day they have soup and beef, with wine, and the same in the evening. Each man is allowed a bottle of the red wine of the district, costing there from 3d to 4d.

The whole Imperial farms are under the management of one director. A *comptable* (cashier) keeps the accounts, pays wages, &c., and has the whole control of payments and receipts. The salary of the director is 6,000 francs, with 1,500 francs for travelling expenses—in all about 300*l* annually. The cashier's salary 2,400 francs—nearly 100*l*. House accommodation is provided in addition. A veterinary surgeon is also engaged, whose salary is 2,500 francs—about 100*l*. On each farm there is a farm steward, whose salary is 1,500 francs—about 60*l*. There is one ploughman for each pair of horses kept, who receives, besides food and lodgings, generally 300 francs annually—about 12*l*. The shepherds, one on each farm, receive 1,000 francs—40*l*—without food. They being married men, have cottages provided on the farm. Cattlemen with their wives receive the same wages as the ploughmen. There being a great scarcity of labourers in the district, soldiers from the camp are sometimes allowed to work on the farms. Upwards of one hundred soldiers appeared to be engaged during the harvest, principally in cutting the crops with scythes. The soldiers are paid at the rate of 1s 2d per day, with food, either when employed in harvest or the ordinary work of the farm.

There was one reaping machine at work, a French prize machine. No thrashing machine was used at the time of the writer's visit in August last. All this is very business-like, and cannot fail to induce improvement in the neighbourhood.

The farm of Villeneuve l'Etang is attached to, and for the most part within, the domain of St Cloud. The palace of Villeneuve formerly belonged to Marshal Soult, and is occasionally used by the Emperor and Empress when in strict privacy. The farm is about two miles from St Cloud, and is regarded as a dairy farm for the supply of the palaces. The Emperor sometimes visits the farm early in the morning. Here there are more than 30 cows kept, which are chiefly of the Schwitz breed. There were also some Ayrshires purchased at the Paris Exhibition of 1855, and some Normand-French cows. The Ayshires, however, have not bred. One of the Normandy cows might have been taken for a pure Shorthorn. All these animals were in very high condition. Of course everything connected with the dairy and cattle-sheds is of the best, and the order and cleanliness of the whole premises imparted an air of general comfort.

Then there are the domains in Gascoigne, called Des Landes, a vast tract of heath and uncultivated land extending to 1,250,000 acres, through which the railway from Bordeaux to Bayonne passes. This tract has been of late years partially improved by planting; agriculture hitherto has been of secondary importance. The *Pinus Maritima*, a resineas fir, grows well here, and it has been the means of improving the "Duns," or blowing sand-hills, in tracts of wealth-producing land. At 20 years old this kind of plantation is worth from 12*l* to 15*l* per acre. The soil of this tract is sand with a very small per centage of vegetable matter, black and about a foot in depth; the subsoil a soft sandstone. From 400,000 to 500,000 hectares of this land is the property of parishes, who keep it in its original state as commons. In 1857 a law was passed to compel the parishes to plant or cultivate all their common lands within 12 years, assistance being afforded by Government where required. Much progress has already been made in improving these commons. The State has made roads, and will keep them in order for five years.

In order to set an example of improving this tract, the Emperor has bought 8,000 hectares in the midst of the Grande Lande, and in the worst part of this naturally barren waste. We must defer an account of some measures taken to this end for the present.

LANDLORDS AND TENANTS.

GAME PRESERVING.

We last week noticed a speech by Mr John Grey, of Dilston, at the Hexham Farmers' Club, as illustrating the want of appreciation by our best managers of landed property of the all-sufficiency of the principles of freedom and self-interest as applicable to farmers and farming contracts. Our illustration was, however, rendered imperfect by the exigencies of the printer, who was compelled to omit the portion we now give.

The following passage seems to show that even Mr Grey's mind is more affected with apprehensions for the landlord and suspicions of the tenant, than impressed with the axiom that security and freedom to the tenant are the indispensable preliminaries to improved farming. He said, the "opinions which would lead farmers to do as they pleased, are much more fitted for the system of letting by annual tenure than by lease. If a landlord has a tenant occupying annually, and if he sees that he has got a tenant who is inclined to take an undue advantage of his land by cultivating in such a manner as is not likely to return to the landlord his property in equally good condition as when he let it, and if he sees a man would be inclined to break up a fine old grass pasture, because he would have the benefit of a few year's cropping with very little expense,—or if the man be inclined to follow a system of cropping on the best portion of his land, and leaving the inferior, because it would require more cultivation to keep it up to the mark, so that it may be difficult to reclaim,—on this the landlord can draw the check-cord, and give his tenant notice to quit." This is giving up the whole question of leases. It might be very well for the landlord to reserve the power of drawing "the check-cord," if he could persuade a prudent capitalist to farm highly with such a cord about his neck; but it is mainly to such one-sided contracts that the lagging condition of English husbandry notoriously is due. Neither are Mr Grey's examples particularly happy, for the breaking up "fine old grass pasture" is a thing only done by express and well-considered agreement, and no one has suggested that freedom from cropping regulations is to authorise the breaking up old grass land. So, again, a farmer may wisely and usefully to his farm cultivate his good land on a different plan to that in which he cultivates the poorer portions of his farm; and such a difference of culture by no fair inference could lead to the assumption that the poor land would be so neglected as to require to be "reclaimed." This is scarcely the line of argument we looked for in such a quarter. So farmers, like other men, may fall into misfortune if they speculate in matters not pertaining to their business, or become the victims of fraud; but such contingencies afford no reason whatever for imposing on all farmers restrictions and regulations which must harass and impede the good, without checking or controlling the bad, farmer.

To Mr Grey's other propositions, that farming contracts should be plainly and intelligibly worded, that landlords should make all permanent outlays necessary for the proper management of a farm, so that the tenant may employ his capetal "in his own business—in making the most he can of his land," and that proper cottages should be provided for the labourers engaged on the farms, we entirely accede.

So, on the subject of game, Mr Grey reads a very proper lesson. He said:—"There is another subject connected with the occupation of land in this country, which has led and will continually lead to very great dissatisfaction and disagreement. If it is essential that a farmer, when he has good offices, should select the very best description of cattle—if it is essential for his profits that he should have that description which comes very early to maturity, and which will return a fair amount of profit for the food consumed, it surely must be contrary to every principle of justice that any part of his produce should be destroyed by animals over which he has no control." Tenants are generally pleased to preserve partridges and hares enough to afford a fair amount of spert for their landlords, when not "troubled with gamekeepers to vex them (the tenants) with their insolence; but "there are some parts of the country where game is preserved to a most injurious extent." "In such cases great injustice is done to the cultivator of the soil, and it is connected with great impolicy. If we rear produce for the purpose of feeding animals, which are to go to market for the good of man, surely that produce should not be subjected to the unlimited destruction which wild animals bring upon it. It is a thing which is incalculable. If you see a general rabbit-warren adjoining one of your fields,—which is one of the greatest evils you can suffer,—and you see a few acres trodden down and destroyed, you may in some measure reckon the mischief; but, in other respects, I defy the best judge possible to say what is the injury the farmer has sustained; and I have never yet, where valuation and arbitration were resorted to, seen the farmer get one-half of what I consider he was entitled to. Look at the progress of a single hare. You see the hare enter a wheat-field,—you see him pick out a stem here and there in his course over the field,—he will nibble an inch or two from this stem, and he does not stop till he has cut off a great many. It is not that that inch he has consumed has any appreciable value, but this ear of corn would have been matured; and if you consider the damage which is done by one individual hare in a wheat field in one night, you will find that the damage which is done by these animals night after night comes to a considerable amount,—it may be to bushels an acre. And no one will say that that is a profitable way of keeping up a property, whether the hare goes into the pocket of the landlord, the keeper, or the poacher." This is much to the purpose, and should be heeded alike by landlords and farmers.

Literature.

The Autobiography of a Seaman. By Thomas, Tenth Earl of Dundonald, G.C.B., Admiral of the Red, Rear-Admiral of the Fleet, &c., &c. Vol. I. Bentley. 1859.

[First notice.]

We confess to a lingering belief in and admiration for the superhuman heroes of mythology and impossible Paladins of old romance, and to indulging, during an accidental hour of idleness, in refreshing our memory of those impracticable achievements and extravagant acts of valeur which used to delight us in our nonage. Unhappily, we think, for them, our children have grown wiser: they don't believe in heroes, and they don't care about knight-errantry; so that even before them we must blush when detected in such puerilities. It is gratifying, then, to be presented with a chivalric romance in the shape of a veritable autobiography

and to receive from one of the last survivors of the generation of Collingwood and Nelson the history of a life of knight-errantry more congenial to the age of Cœur-de-Lion than to that of Queen Victoria. Never was knight-errant more daring than Lord Cochrane, now Earl of Dundonald; never did Paladin or Crusader encounter more risks and hairbreadth 'scapes, or seem to enjoy them more thoroughly; and very seldom in epic or romance do we find more amusing incidents or spirit-stirring adventures, than in these narratives of the feats done in his youth and manhood by one who is yet among us.

The first volume of the "Autobiography" does not bring down the story to the point at which the recently published volumes on Chili and Brazil commence; and we are spared for the present the necessity of discussing the very painful history of the misfortune which drove the bravest of British officers from the service of his country. Hereafter, we may have to notice Lord Dundonald's own account of his trial before Lord Ellenborough, and the circumstances which led to his conviction. Having reperused the history of the matter as given in the "Modern State Trials," we are justified in expressing our belief that that conviction was unfounded; that the judge was not impartial, the counsel not judicious, Lord Cochrane's co-accused disgracefully selfish in involving him in their own merited ruin, and he himself most unwise and incautious in his neglect of his defence. It is necessary to say this much in order to account for and excuse the bitterness of spirit and violence of temper which are apparent in every chapter of his writings; and to explain the tediousness and persistency which marks his laboured and very needless self-exculpation in every case of quarrel or complaint. Feeling himself cruelly wronged, and goaded almost to frenzy by the impossibility of obtaining any redress; his name disgraced without cause, his well-earned honours taken from him, his career closed, his character blasted; the high-spirited English nobleman seems to have lost, and never after to have recovered, that generous feeling and dignity of bearing which naturally belong to his truly heroic character. The blow was too heavy to be borne; it had stung him in a point on which, like all gentlemen, and above others all officers, he was keenly sensitive, and ever after the lightest reproach that seemed most distantly to touch his honour, roused him into passion and exasperated him to injustice. In reviewing his works, therefore, we shall take as little notice of his complaints and reiterated self-exculpations as is consistent with justice to himself and to the facts he states; regretting that nearly half his pages should be filled with passionate complaint or undignified self-defence, but passing as lightly as we may over infirmities whose cause is so obvious and so painful.

Some of his remarks in regard to the present and past condition of the British navy, however, do not fall under this head, and deserve some notice, both from their intrinsic value, and from the experience of the author. Though sometimes too broadly expressed, they are generally sound and sensible in substance. Lord Dundonald thinks almost as ill of our existing system of Admiralty administration as the majority of its non-professional critics, and is not even satisfied with the direction of its recent improvements. "Not dockyards but men; not planks but hearts of oak; not ready-made appliances but really efficient officers and crews; not coast fortifications, which never will defend the coast against a superior naval force, but a fleet which shall render it unapproachable":—such is, briefly summed up, his view of the reform really wanted. He seems to concede that a good deal has been done towards the increase of our fleets, and to provide them with armament and equipments complete at all points. But he justly considers the number of ships, however desirable in itself, a question quite secondary to that of manning them efficiently; and sees with the quickness of professional knowledge the difficulties which have grown up since the peace of 1815 in the way of this all-important achievement. His views on this subject must be gleaned from scattered passages, and are nowhere distinctly set forth. He takes a seaman's view of the repeal of the Navigation Laws, and inveighs bitterly against it as having driven thousands of British sailors to seek employment in foreign services. We cannot now reargue that question: we prefer to note the one point of truth which lies in the complaint. There were of old three notable points in our maritime policy: strict protection to British shipping; the maintenance of a permanently superior maritime force; and the broadest assertion of the right of capture at sea. Each of these tended to retain seamen in English vessels. Our protective law excluded foreign ships from a very valuable department of trade, and thus placed them at a disadvantage as compared with our own, which prevented them from outbidding us in the sailor-market. Our maintenance of overwhelming naval strength gave our shipowners the further advantage that the British flag was, in time of war or threatened war, the safest in the world; and our assertion of the right of capturing enemies' goods in neutral vessels deprived the latter of a great part of the advantage they would otherwise obtain by their neutrality. The first and last of these principles we have formally abjured; the second practically neglected. Consequently other nations carry on their shipping trade on equal terms with ourselves,—sometimes, from accidental circumstances, at an advantage; and can thus compete with British shipowners in British markets for the services of British sailors. Neutrals enjoy a great advantage, amounting to an almost absolute preference, in time of war or great danger of war; and permanent neutrals—and our great commercial rival, America, may be considered such—has a permanent advantage over us, which comes into play on every occasion of alarm or disturbance in Europe. If France and Austria, Turkey and Russia quarrel, the merchant in India knows that, before his cargo can reach England, England (or any other European country) *may be* involved in war; and he sends home the English ship consigned to him in ballast, forwarding his consignments to Europe by a non-European vessel. To give British shipping fair play under the new policy, we must exert ourselves to obtain the exemption of *all* mercantile vessels and cargoes from capture, except when attempting to break a blockade.

This would be very far from satisfying Lord Dundonald. He considers the hope of prize-money a most valuable inducement to sailors when, on the outbreak of a war, the navy is in want of men; and regards the blow given to that hope by the new maritime regulations as a most serious source of future difficulty. In this he is probably right; for the hope of winning wealth by adventurous daring, however small the chance of doing so, is precisely the kind of prospect which has powerful attraction for the kind of spirits that make good seamen; and rare prizes of great value will do more to bring such men into our service in time of need than would a uniform rate of high pay and liberal treatment. Human nature is so constituted that the gambling impulse is strong, especially in impulsive and active men—and no others are likely ever to enter the navy in numbers, or to make good sailors in it; and the removal of the chance of great winnings will not be compensated to them by the certainty of small advantages. But this admitted, it must be remembered that the extension of freedom from capture to merchant vessels of a hostile State will not make the case worse for the seaman than it now is. For, under the present law, the shipping of a Power at war with England will simply be locked up uselessly in the harbours, and its trade be carried on by neutral ships, which cannot be touched except when breaking blockade. The universal exemption of merchant vessels from capture will be merely a boon to the shipowners of hostile countries, more than repaid by the concession of the same advantage to our own much more numerous merchant marine. The only real sufferers would be those who first suggested the measure—the Americans—who would lose the present advantage of their extra-European position; and as they are the chief foreign employers of British seamen, their loss in this way would be an additional gain to us. The man-of-war's-man loses nothing; he could make no prizes then, because all merchant vessels would be neutral; he can make none now, because in case of war all trade would be carried on in neutral bottoms. In either case, his extraordinary gains must be restricted to the value of captured ships of war; a value which is now so great that a victory over an equal enemy would probably bring no trifling sum to each individual among the captors. Still, the loss of inducement to enter the navy is a real and serious evil; and our Government is bound to devise betimes a means of counteraction; a substitute for the bribe which circumstances and civilisation have compelled them to forego the power of offering.

Lord Dundonald is further of opinion that the completeness of appliances and equipment in modern vessels of war tends to produce in officers and men a half-knowledge of their profession, and an incapacity for details which they are seldom called on to undertake, which is dangerous to their usefulness and efficiency, and may in case of need prove fatal to ship and crew. The system "impresses officers with a belief that handicraft skill on their part is unnecessary, though in the absence of practically acquired knowledge it is impossible even to direct any operation efficiently. Without a certain amount of this skill..... ...no man can become an efficient naval officer." That such a danger as is here indicated may occur, is evident enough. How far it does exist, only professional men can say with confidence.

If Lord Dundonald will hereafter put his views of patronage in the navy—ministerial and official—and of the right system of promotion, into definite shape, he will have done the public considerable service. As it is, while complaining bitterly of the Admiralty, of parliamentary influence, and so forth, he makes it quite clear that he is no disciple of the modern school of purity-mongers; and that he realises, if he have not formally considered, the impossibility of regulating these matters by fixed and inviolable rules, or of making exceptions without incurring charges of jobbery and partiality, founded or unfounded. He himself owed much, in his early professional career, to a species of jobbery then not uncommonly practised: his uncle, who early appreciated his nautical bent, having caused his name to be entered on the books of several ships which he commanded, so as to give him, on his entrance, the ready-made advantage of some years' nominal service. On this, and on the system of favouritism by officers in command, he observes:—

> The mention of this practice will, perhaps, shock the purists of the present day, who may further regard me as a stickler for corruption, for pronouncing its effect to have been beneficial. First, because, from the scarcity of lieutenants, encouragement was often necessary; secondly, because it gave an admiral a power which he does not now possess, viz., that of selecting for commission those who exerted themselves, and on whom he could rely, in place of having forced upon him young men appointed by parliamentary or other influence; of whom he could know

nothing except that they did not owe their commissions to practical merit.

In my own subsequent career as captain of a man-of-war, there never was the slightest difficulty as regarded men; yet no commander could in this respect be more particular; but of many officers furnished to me through parliamentary influence, it can only be said that they were seldom trusted, as I considered it preferable, on pressing occasions, to do their duty myself, and this, as some of them had powerful influence, no doubt made me many enemies among their patrons. It is all very well to talk of the inordinate power exercised by commanding officers in former times, but whilst the Admiralty even in our day appears to extend a system in which influence has everything and experience nothing to do, the so-called corruption of old, which was never made use of but to promote merit, had its advantages; no instance in which the power then indirectly pertaining to admirals commanding having to my knowledge been abused.

We pause here to note the looseness both of thought and expression which characterises Lord Dundonald, especially in the "Autobiography," and to regret that, on important questions, he does not write with more clearness of purpose, sequence of ideas, and correctness of grammar. The last sentence is absolutely ungrammatical, no construction of its fragments being possible which shall give them a logical connection, and its concluding clause being utterly incoherent. These blemishes seriously detract from the value of any work, especially in passages where clearness and connected reasoning are required. In all such places, Lord Dundonald's style becomes worse than usual, and his arguments lose half their weight by being presented without coherence, and in very bad English.

But in regard to the theory here broached, one thing deserves notice: that the patronage of permanent officials in their own department and under their own immediate supervision is less likely to be abused than that of superiors removable by a parliamentary vote, politicians before everything, and who do not *see*, and therefore do not either fully know or keenly feel, the evil consequences of their abuse of power in minor appointments. A Secretary of State is much more likely than a head clerk in his office to appoint a good-for-nothing young relative to a vacant place involving responsibility. A First Lord of the Admiralty is much more likely to appoint a second-rate man to command in place of a first-rate officer, than is an admiral actually in command to appoint a bad captain, or a captain to recommend for promotion—in his own ship—an idle and incapable midshipman. The officer has both professional feeling, pride in the efficiency of the ship, or squadron, or department in his charge, and self-interest, to keep in check any tendency to jobbery; the political superior has no such feelings, and is held in control only by a sense of public duty or a fear of exposure. The one is made to feel at once and personally the consequences of misconduct; the other can do a good-natured thing at the public expense, and hardly know that he has done mischief. The officer is further amenable to the opinion of the profession, which he does not like to defy by a scandalously bad appointment; the statesman, to the influence of his partisans, whom he is glad to gratify by obliging them with promotion for a relative or constituent. So far, no doubt, there is justice in Lord Dundonald's preference of official to ministerial patronage; if not in his fear that the latter may be in our days more mischievous than the former ever was.

But, on the whole, the impression left by the first volume of these memoirs is decidedly in favour of the present as compared with the past. We gather that, in the heroic age of the English navy, corruption was much more gross, and maladministration much more flagrant, than it has ever been of late years. We read of malpractices to which those occasionally detected and clamoured over in our own day are mere trifles. A surgeon's assistant on board a hulk for the reception of sick prisoners of war keeps a table for the officers at a cost of 2,000*l* a year, made by robbing his patients of the stores liberally provided for them. Ships were ordered, for security, to have their timbers fastened with a certain number of extra bolts; the tops and points of the bolts were driven, and the rest embezzled by the workmen or their employers in the dockyards. In one case 1,000*l* was charged for work proved not to be worth 40*l*. Provisions of the worst kind were supplied to the Admiralty at high prices. The abuses committed on stations abroad were incredible; merchants and contractors offering bribes of enormous amount—in one case 87,000*l*—to Government officials, in order to be allowed to charge their own price for articles supplied. Twenty transports lay for three years idle in Messina, at an annual cost of 90,000*l*; and it is not on Lord Cochrane's authority that the charge rests, that political influence, and not the market price, governed the bargains made by Government with the owners of such vessels—who often made enormous fortunes at the public expense. "Three-fourths of the amount of the stores supplied for prisoners of war" is said to have been pilfered. Medicine was doled out in quantities utterly insufficient. Lint was supplied with similar grudgingness, and sometimes old sponges were substituted, which, having been already used on putrescent sores, cost the lives and limbs of many gallant fellows on their second-hand application. And there was mismanagement on a larger scale than this. Two ships of whose fate we are informed by Lord Dundonald, besides doubtless many others of which he knew little or nothing, had been sent to sea in such condition that—as had been distinctly predicted beforehand to the responsible authorities—they foundered in the first gale. One such act would now, if perpetrated after similar warning, be sufficient to damage the character of any Minister, and arouse bitter reclamations in Parliament and in the press: in those days the practice—for it was scarcely less—of sending ships to sea with little if any attention to their seaworthiness, attracted but rare and ineffectual remark. Lord Cochrane himself was once sent to sea by the Port-Admiral in such a hurry that the stores were only just on board, not a cartridge available, the guns consequently useless, and the ammunition casks and provisions still on deck. The ship was hove-to as soon as she was out of sight of shore, her stores properly stowed, her cartridges filled and her guns secured. In a gale, she would have been in serious danger; had an enemy, "even a gunboat," attacked her, she could not have fired a shot in return. This was done by the Port-Admiral to win credit for "dispatch" in getting ships ready for sea; and the practice was not uncommon.

The following sentences throw some light on the difficulty of procuring seamen in those days, despite the martial spirit abroad, and the prize-money to be won:—

> Much has been said about the difficulty of manning the navy by persons who had not a knowledge of the arbitrary and cruel practices above mentioned, and of many others on which it would be tedious to dilate, but which, under the pretence of zeal for the promotion of the service, rendered the service at that time almost intolerable. No one acquainted with the facts can wonder that interminable cruises, *prohibition to land in port*, constant confinement without salutary change of food, and consequent disease engendering total debility, should have excited disgust and even terror of a sailor's life; to which may be added the condemnation of invalids to harbour duty, far more severe than duty afloat, with no chance of escape but by a return to actual service; where, strange to say, though unfit, such men were again received.

Lord Dundonald—while as Lord Cochrane he sat for Westminster—did much good by boldly exposing abuses of this kind in the House of Commons. But he achieved nothing beyond the exposure; he was too angry and vituperative a speaker, and too poor a tactician, to gain any substantial advantage over a compact ministerial majority. His political life was entirely a failure; and the interest of his memoirs lies neither in his professional opinions nor his parliamentary career—his mistakes, complaints, or suggestions; but in the exciting adventures with which they are crowded,—which, however, we must reserve for future notice.

Practical Mercantile Correspondence. By William Anderson. Tenth Edition. Effingham Wilson, Royal Exchange.

In the tenth edition of this well-known manual, pains appear to have been taken to *modernise* as much as possible the useful information which it contains. New commercial terms have been embodied, and much additional matter inserted, including correspondence with Australia, accompanied by invoices and account-sales. The use of commercial *slang* has been judiciously eschewed—a feature of the more importance as the work is specially intended as an exercise-book for commercial schools. It will be found equally useful in the counting-house.

The American Almanack for 1860. Boston: Crosby and Nicholls.

The new number of the "American Almanack" is always welcome. It is, after our "Nautical Almanack," perhaps the most valuable scientific almanack printed; and, as a political almanack for the United States, quite invaluable.

The Law of Master and Servant. By James Walter Smith. Effingham Wilson.

This is another of Mr Smith's excellent and useful series of legal "handy books." They are really *handy* and most useful. They are got up with competent knowledge, and much power of digesting knowledge into a conveniently available shape. The present publication is very opportune.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

Owing to the desire of Mr Gladstone to communicate in his financial statement in Parliament the details of the Treaty of Commerce between France and England, I find official people here rather reluctant to talk about them. But I believe that I am not mistaken in stating that the concessions which England makes are in substance these:—1, abolition of duties on all manufactured productions; 2, a reduction of 7s the gallon on French spirits, so as to make the import duty the same as the duty levied on British colonial spirits and rum; 3, an immediate reduction to 3s the gallon on wine; 4, a further reduction of the wine duties from the 1st of April, 1861, to a rate not exceeding 1s to 2s the gallon, according to the quantity of alcohol contained in the wine; 5, a mere nominal duty on grain and flour, and on articles made of flour; and 6, a reduction of duties, more or less considerable, on all other articles imported from France. If I understand rightly, England reserves to herself the right of according to all other nations the same reductions as she grants to France, and the further right of modifying the wine and spirit duties, should changes in the Excise duties at home appear to render modifications desirable. As to the duty to be imposed according to the degree of alcoholisation of wine, it will be fixed in such a manner as to allow all the ordinary wines of France to be imported at the lowest rate,—that is at 1s the gallon.

With regard to the concessions of France, none are to be immediate; but the reduction of the duty on English coal and coke to the rate paid by Belgian, the abolition of the duty on wool, the reduction of the duty on iron and machinery, the abolition of prohibitions and the substitution for them of duties of which none is to exceed 30 per cent. *ad valorem*, will, it is not doubted, be in time very advantageous to her. As regards the reduction on coal, the following extract from the tariff, showing the duties at present paid, will give an idea of its importance:—

By Sea.	By French vessels. Per 100 kilogs. (About 2 cwts.)	By Foreign vessels.
From Sables d'Olonne (a little above Rochelle) to Dunkirk (that is, all the coast nearest England, and consequently for English coal)	30	80
All other parts of the coast	15	65
By Land.		**Per 100 kilogs.**
From the sea (Dunkirk) to Halluin, department du Nord (that is the Belgian frontier, and consequently for Belgian coal)		0
By the River Meuse and the department of the Moselle (the German frontier, and consequently for German coal)		30
By other points		10
		15

Coke—One-half more duties than the preceding.

It will be seen that these duties (to which, by the way, must be added what the French call the *double decime*, an addition made to the taxes) are so contrived as to be scandalously unjust towards England. I have heard the question asked, whether, in modifying the coal and coke tariffs, the Government would not have done well to have adopted a uniform charge for all sorts of coal, and to have made it the lowest in the preceding table. With regard to the duty on machinery, I believe that the reduction is likely to be rather considerable; and certainly there is plenty of room for reduction, seeing that the present tariffs range from 15f to 200f the 100 kilogs by French vessels, and from 16f 50c to 212f 50c by foreign vessels or by land. As to the reduction on iron, if, as is stated, it is to leave the duty at, on an average, 70f (2*l* 16s) the ton, it can hardly, we may fear, lead to very large exports from England. But the abolition of the duty on wool ought to augment the English export of that article very considerably. In 1857, the quantity of wool which France received from England was 128,226 quintals (the quintal i snearly 2 cwts); in 1858, 112,294; and in 1859, 89,226.

On the matters in the coming changes not specially affecting England, what I hear is, that the contemplated abolition of the duty on cotton and wool will decidedly take place very shortly (the 1st July next has been named by a Government journal), in order to give the manufacturer time to produce any quantity of goods they may think fit before the abolition of prohibitions takes place.

I find that people here readily acknowledge that England, in making the concessions she has done, has acted in the most liberal manner; and I have heard some economists say that by her liberality she has enabled the French Government to accomplish what would perhaps have otherwise been impossible,—the destruction of the monstrous tariff system which has for years weighed on France. These economists think that the honour of having contributed to so great an act, and of having thereby established in French commercial legislation the principle that it is the consumer, and not the producer, who is most worthy of the regard of the Government—a principle which forms one of the bases of modern economic science, but which has hitherto been repudiated in France—a principle, too, which admits the very widest development—economists, I say, think that this honour ought, in estimating the value of the treaty, to count for something in English eyes. They remark, too, not without justice, that as the French tariff is at this moment in even a worse state than was that of England when Huskisson commenced his reforms, and that as the great mass of the French public are, from ignorance of economic questions, prejudiced against commercial modifications, especially such as are likely to be beneficial to perfidious Albion,—it would be unreasonable to expect the French Government to make, for the present, much larger concessions than it has done.

The Protectionists and the Prohibitionists, headed by Senator Mimerel and the members of the Society for the (*soi-disant*) Protection of National Labour, are naturally furious at the coming changes. They even proposed, in order to resist them, to shut up their manufactories,—that is, to throw their thousands of workmen out of employment, and thereby drive the men to insurrection. At Roubaix, some of them actually went the length of discharging a number of men; and at Lille a general suspension of work was actually resolved on. But the Government has acted with laudable resolution. It told the Protectionists at Lille, Roubaix, Rouen, Mulhouse, and other places, that if, from factious oppositon to reforms which have been long needed, they should excite their workmen to revolt, they themselves, and not the men, should be arrested. This threat has completely cowed them: even the great Mimerel himself, who used to be so arrogant with preceding Governments and even with the present one, has become mild as a dove: the prospect of "the damp straw of the dungeon," or of a voyage to Cayenne, has cooled his Prohibitionist fervour.

Numerous addresses to the Emperor on the subject of the projected reforms are being signed. At Amiens, Rouen, Mulhouse, and in the manufacturing towns generally, the reforms are, of course, condemned in terms more or less decided; but in the seaports, and in the wine districts, they are approved of, for the simple reason that they will give activity to shipping, and secure England as a market for French wines and brandies.

As everything connected with the treaty is of interest, it may be stated that though, as mentioned in my last, the treaty was signed in Paris at the beginning of last week, it was subjected to modifications in London, which rendered the signing of a new one necessary. Accordingly the signing of the definitive treaty took place, as I am told, on Sunday, the 29th. Nevertheless, the treaty will bear the date on which the signatures were first attached, in order that the name of M. Buroche, as *ad interim* Minister of Foreign Affairs, may remain one of them—a distinction to which he is said to be very sensible, and which he appears honestly to have earned by the aid which, as President of the Council of State, he gave to the completion of the treaty. If the treaty were to bear the date of the 29th, it would have been the duty and privilege of M. Thouvenel, the present Minister of Foreign Affairs, to have signed it. As to the modifications introduced, they, I believe, consist in an addition to the clause relative to the wine duties, to the substitution of the word "British" for "English," and to some verbal changes.

In consequence of the increase in the rate of discount by the Bank of England, an increase in the rate of the Bank of France was expected, but the Directors in their weekly meeting held today have decided that none shall be made. The discount consequently remains fixed at 3½.

The anxiety caused by the rather violent discussion between the French Emperor and the Pope, by the state of Italian affairs, and by the hostile attitude of the clerical and legitimist parties,—an attitude so hostile as to have occasioned the suppression of one of their

newspapers and the "warning" of two others,—have naturally produced a depressing effect on the Bourse, as the subjoined quotations will show:—

At a meeting of the shareholders of the Caisse Generale des Chemins de Fer of M. Mirès, held a few days back, a dividend of 25f a share for 1859 was declared.

The following is the weekly account of the markets:—

Flour.—The market at *Paris* continues without much activity, and yesterday the ordinary sorts were at 51f to 53f the sack of 159 kilogs, other sorts 54f to 56f and 56f 50c. For the four marks the quotation was 55f 50c, and even 55f 25c for the present month; 56f for March.

Wheat.—At *Paris*, yesterday, transactions were difficult: fine qualities were at 31f to 31f 50c the sack of 120 kilogs; good sorts, 30f to 30f 50c; secondary qualities, 29f to 29f 50c the sack of 120 kilogs. As to the provincial markets, 12 present a rise of 15c to 1f the hectolitre, 80 a fall of from 15c to 1f 65c, and 38 have remained without variation.

Cotton.—At *Havre*, in the week ending Friday, business was not very active, owing to spinners, in anticipation of the promised abolition of duty, restricting their purchases to what is strictly necessary. The sales were 8,035 bales, and the closing quotations were for "low" sorts 1f below those of the preceding week, "low" New Orleans being consequently 99f the 50 kilogs; other sorts remained unchanged. The arrivals of the week were 20,753 bales. This week a fair amount of business has been done, and yesterday low New Orleans was 99f and 100f.

Coffee.—Business at *Havre*, in the week ending Friday, consisted in sales of 5,200 sacks Hayti, at 74f the 50 kilogs in bond; 400 sacks ditto Cape, 75f 50c; 45 sacks Gonaives, 77f; 1,600 sacks Rio, not washed, at 72f to 72f 50f; 164 ditto washed, 84f to 86f; 100 sacks Ceylon triage, 128f duty paid; 250 sacks ditto, without triage, 125f; 50 sacks Manilla, 130f; 30 sacks Java, 136f; and 210 sacks Padang, 134f to 135f. Some lots of damaged Gonaives and Rio were sold by auction. The arrivals were 538 sacks Gonaives, and some small lots of other sorts. This week the sales have not been very important; and the quotations are: Hayti, 74f; ditto Cape, 76f; Gonaives, 77f 50c; Mocha, 152f duty paid; Rio, 74f to 74f 50c; ditto, unwashed, 82f. At *Bordeaux*, last week, 900 sacks Java were sold at prices not stated. There were, however, also sales by auction of about 2,000 bales of Java, Mysore, Salem, and Guayra, at prices varying from 245f to 278f the 100 kilogs. Nothing has been done this week. At *Nantes*, last week, no sales of importance are recorded, and this week there have been none. At *Marseilles*, last week, little was done: between 500 and 600 sacks Brazil went at 74f to 78f the 50 kilogs in bond and about 700 sacks damaged ditto, went at 68f to 75f.

Sugar.—This article at *Havre*, in the week ending Friday, was not very active. About 1,400 hogsheads of French West India were sold at 59f to 59f 75c the 50 kilogs; a small lot of "usine" ditto at 60f; a small lot of Cuba at 34f in bond; 1,414 sacks Pernambuco, 33f in bond; 1,500 sacks Mauritius, 65f 50c duty paid; and a small lot of damaged Havana. The arrivals were 7,750 bales. This week sugars have been very calm: French West India has been done at 60f. At *Bordeaux*, last week, business was limited, and closing quotations were: French West India, 59f; Reunion, 61f to 62f; Mauritius, 70f to 72f the 50 kilogs. This week nothing worth quoting has been done. At *Nantes*, last week, rather large quantities of Reunion and Mauritius, and some smaller lots of other sorts were disposed of, and closing quotations were: Reunion and Mauritius, 61f 25c to 61f 50c: French West India, 59f 50c to 60f; Havana, 36f to 36f 50c. This week, a large lot of Mauritius has been sold (for England) at 61f 25c (at Nantes.) A small lot of Reunion (Murat) has also been sold at 66f 50c, and a large quantity of Reunion for refining, at 59f 87½c to 60f. Among the sales made at *Marseilles* last week, were 1,100 bales Reunion, at 64f the 50 kilogs duty paid.

Indigo.—At *Havre*, this week, some lots of Bengal have been sold, part at a premium of 50c to 55c, the rest at prices kept secret.

Tallow.—At *Havre*, last week, nothing was done, and there were no arrivals. This week the same has been the case. At *Paris*, yesterday, the 100 kilogs were 131f 70c within the walls—a decline of 1f on last week's quotations

Hides.—At *Havre*, in the week ending Friday, business was not so animated as in previous weeks, but nevertheless the sales were: 1,250 Buenos Ayres dry at 155f to 156f 50c the 50 kilogs duty paid; 3,275 La Plata salted, 84f to 85f; 1,425 Rio Grande salted, 82f 50c; 6,000 Rio Janeiro, 69f; 221 Arica dry, 107f 50c: 100 New York salted, 65f; 500 Western ditto, 63f; 1263 New Orleans salted, 61f. The arrivals exceeded 40,000. This week the sales have been tolerably numerous: Buenos Ayres dry have been at 160f duty paid; Monte Video dry, 157f 50c; New York salted, 62f 50c; La Plata dry, 156f to 160f; Australia salted, 57f 50c.

Wool.—At *Havre*, in the week ending Friday, about 70 bales La Plata unwashed were sold at 1f 20c to 2f 50c the kilog in bond; 7 bales sheep skins Buenos Ayres unwashed, 1f 90c. The arrivals were not important. This week business has not been active: Buenos Ayres, 1f 85c; Peru damaged, 1f 59c to 1f 85c.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was 92f the hectolitre; Montpelier, 128f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 130f; and beetroot, first quality, 95f.

Correspondence.

LORD GREY ON CHINA.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In your article of the 28th January on "The Opening of the Session," you commit an injustice to Lord Grey, if I am not mistaken, which I hope you will repair by the insertion of this note.

You charge him with assuming the existence of a *war* with China, as a reason for summoning Parliament to approve or disapprove that step. Now, if I have rightly understood it, his argument did not rest on the fact of *war*, but on that of *armament*. He laid down the just constitutional maxim, that Ministers have no right to plunge the country into—not war but—*war expenses* without at once making Parliament acquainted with the act and its reasons. And this is perfectly sound. For if Lord Palmerston may incur at his pleasure expenses which, *nolens volens*, Parliament must provide for, without consulting the House of Commons,—if the Minister be allowed to coerce Parliament into payment of costs incurred without its sanction when that sanction might have been asked,—what becomes of the functions of the House of Commons as guardian of the national purse?

When Mr Canning sent forces to Portugal there was no *war*; yet the fact of sending a military force to a foreign country was held to require an immediate message to Parliament.—I am, Sir, your obedient servant,

Percy Greg.

MUTUAL COMMERCIAL CONCESSIONS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—The principles stated in your last as those which ought to regulate international commercial agreements will, I believe, in their general scope, receive the hearty concurrence of economists.

At the end of your second paragraph, after saying that our protective duties lessen the quantity consumed, you add, and consequently "diminishes the daily benefits which France confers on us." This, of course, must be read in the light of what precedes as referring only to articles of utility, which, in proportion to their consumption, benefit the people.

Having granted that it is desirable that every community apply itself to supply whatever wants it is peculiarly suited for supplying, so that the consumer may obtain the commodity at the least possible cost, it would be at once allowed that protective duties are unwise. But it is not clear to me that to remove them becomes a duty which we are bound to discharge, whatever others do; and, independent of motives of immediate expediency, were it so, the moment we admitted the truth of free trade principles, we ought to have abolished all protective duties.

To abandon at once protective duties on a branch of industry, employing many hands, and at the same time not one which we were pre-eminently fitted for conducting, would drive many to other branches for which our country *was* eminently suited, but in which the demand was fictitiously small through the protective obstructions of our neighbours.

Ardently desiring the removal of protective duties as against the real interests of all, our statesmen would, with every propriety, urge on continental and other Governments the reduction of such duties, primarily for the interests of these Governments themselves, and also as forming an obstacle to our extending to them the advantages we would desire.

I believe there is much disappointment felt that our Government has not been able to procure more liberal concessions from the earnest-minded nations of Northern Europe, who possess a strong affinity to the people, and in whom, in the mass, we have much confidence.

Should these difficulties be so general as to recommend themselves to a small share of your attention, your remarks will be esteemed by, Sir, yours respectfully,

A Subscriber.

COMMERCIAL AND MISCELLANEOUS NEWS.

The state of the coffee trade in France in 1859, is thus alluded to by Messrs De Coninck and Co.:—Contrary to what occurred in 1858, the importation in 1859 attained an amount (viz., 48,000,000 kilogrammes) which had not been exceeded, except in 1857, when it was 53,600,000 kilogs, as shown by the following table of imports during the last five years:—

	Foreign Coffee. kilogs.	French Colonial. kilogs.	Total. kilogs.
1859	48,000,000	...	48,000,000
1858	33,700,000	400,000	34,100,000
1857	52,600,000	1,000,000	53,600,000
1856	39,200,000	800,000	40,000,000
1855	39,200,000	600,000	39,800,000

The consumption is as follows:—30,000,000 kilogs, against 28,200,000 in 1858, 27,900,000 in 1857, 23,200,000 in 1856, 26,700,000 in 1855, 21,700,000 in 1854, and 19,900,000 in 1853. The consumption of coffee in France is thus shown to maintain a progressive tendency, and it would doubtless be augmented in a much greater proportion if the import duties were reduced in a liberal manner. The general movement in 1859 was as follows;—

	kilogs.	kilogs.
Stock, December 31, 1858		9,300,000
Importation, December 31, 1859		48,000,000
		57,300,000
Consumption 1859	30,000,000	
Exportation 1859	16,000,000	
		46,000,000
Stock, December 31, 1859		11,300,000

The accounts from the wine markets of France describe considerable excitement, and a general disposition among the dealers to ask exaggerated prices. In brandy there has been a marked rise.

The latest advices from Jamaica state that sugars ranged at from 15s to 22s 6d; Bengal rice, 14s to 14s 6d; and Patna, 20s per 100 lbs. The exports from Georgetown during the year included—Sugars, 45,757 hhds, 2,454½ tierces, 11,208½ barrels, 11,179 bags; rum, 20,562 puns, 3,749 hhds, 1,686½ barrels; molasses, 8,617 casks; timber, 360,000 cubic feet; cocoa nuts, 473,151. The markets at Demerara had been very dull in consequence of the holidays. The old canes were looking well, but ripening fast for want of rain. Young canes thriving pretty well.

A report from Calcutta to the 24th December says:—Business continues in a most unsatisfactory position. The high prices asked by holders and the continued small supplies have checked transactions to some extent. Piece Goods—The same dulness and scarcity of money continued to prevail in our market during most part of the last fortnight. Lately a better feeling has been manifested, and prices of some descriptions of goods have recovered a little in demand, as also in prices. Sales in the bazaar are going on rather freely, and if it were not for the tighter money market, we believe that higher prices would have been paid. A large amount of money is still lying in the Bank of Bengal unemployed, the requirements for discount purposes are limited, and the only demand is for loans upon Government securities at 5 per cent. per annum, and for this the other banks are keen competitors with the above institution, which has now much less of this business than in former years. In the bazaar there is a fair demand at a little above bank rates, say 6 to 7 per cent.

Coinage, &c., at New Orleans, for the year 1859:—

Table exhibiting the quinquennial progress of the London joint stock banks within the past 10 years, showing the respective amounts of current and deposit accounts, guarantee funds, dividend and bonus per annum, also the ratio of decennial increase of current and deposit accounts per cent.:—

Year.	Banks.	Current and Deposit Accounts. £	Guarantee Fund. £	Dividend and Bonus per Annum. Per Cent.	Ratio of Decennial Increase of Current & Deposit Accounts. Per Cent.
1849	London & Westminster	3,680,623	107,844	6	
1854		7,177,244	134,526	14	202.00
1859		11,115,697	200,000	18	
1849	London Joint-stock	2,792,507	132,723	9¾	
1854		6,161,154	155,852	25	242.23
1859		9,556,797	229,370	18	
1849	Union Bank of London	2,835,617	50,000	6	
1854		7,031,477	50,000	15	228.62
1859		9,318,391	94,633	15	
1849	London & County	1,675,494	28,883	6	
1854		3,779,945	61,671	12	196.93
1859		4,975,029	105,000	11	
1849	Commercial Bank of London	541,804	17,418	6	
1854		1,265,903	64,012	10	70.97
1859		926,314	75,000	7	

The aggregate increase of deposits in the first five years was 120.50 per cent.; in the second period, 41.22 per cent. The ratio of increase in the aggregate for the past 10 years has been 211.40 per cent.

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending December 17, 1859, when compared with the previous month:—

	Nov. 19, 1859.	Dec. 17, 1859.	Increase.	Decrease.
	£	£	£	£
Bank of England	21956370	21077028	...	879342
Private Banks	3624780	3480716	...	144064
Joint Stock Banks	3080754	3017554	...	63200
Total in England	28661904	27575298	...	1086606
Scotland	4510498	4591058	80560	...
Ireland	7445858	7403791	...	42067
United Kingdom	40618260	39570147	...	1048113

And, as compared with the month ending the 18th of December, 1858, the above return shows an increase of 1,259,470*l* in the circulation of notes in England, and an increase of 2,141,992*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 924,219*l*, the English joint stock banks are below their fixed issue 284,803*l*,—total below fixed issue in England 1,209,022*l*; the Scotch banks are above their fixed issue 1,841,787*l*, the Irish banks are above their fixed issue 1,049,297*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 14th of December was 16,985,218*l*, being an increase of 123,759*l* as compared with the previous month, and a decrease of 1,890,328*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 17th of Dec.:—Gold and silver held by the Scotch banks, 2,581,493*l*; gold and silver held by the Irish banks, 2,661,788*l*; total, 5,243,281*l*; being an increase of 124,902*l* as compared with the previous return, and an increase of 198,274*l* when compared with the corresponding period last year.

An account, pursuant to the Act 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 14th day of January, 1860:—

Name and Title.	Authorised Circulation. £	Average Circulation. £	Average Amount of Coin held. £
Bank of Scotland	300485	459195	259631
Royal Bank of Scotland	183000	478067	390678
British Linen Company	438024	522427	374088
Commercial Bank of Scotland	374880	563033	283494
National Bank of Scotland	297024	453816	255134
Union Bank of Scotland	454340	635093	305654
Aberdeen Town & County Banking Company	70133	136150	91536
North of Scotland Banking Company	153319	207981	100943

Total 1858	4,512	2,320,334	4 706	2,422,928
Total increase	392	94,355	388	85,652

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 1st day of February, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,752,710	Government Debt	11,015 100
		Other Securities	3.459,909
		Gold Coin and Bullion	14,277,710
		Silver Bullion	...
	28,752,710		28,752,710

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10 171.190
Rest	3,324,479	Other Securities	20.773 681
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	5.309.759	Notes	6,846,370
		Gold and Silver Coin	664,792
Other Deposits	14,484,676		
Seven Day and other Bills	784,119		
	38,456,033		38,456,033

Dated the 2nd February, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,690,459	Securities	30,866,871
Public Deposits	5,309,759	Coin and Bullion	14,942,502
Private Deposits	14,484,676		
	42,484,894		45,809,373

The balance of Assets above Liabilities being 3,324,479*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£202,813
A DECREASE of Public Deposits of	219,969
An INCREASE of Other Deposits of	404,929
A DECREASE of Government Securities of	240,213
An INCREASE of Other Securities of	1,273,924
A DECREASE of Bullion of	616,594
An INCREASE of Rest of	29,344
A DECREASE of Reserve of	896,054

The heavy increase in the "other" securities, and decrease in the reserve, attest the severity of the pressure for money. A further large amount of Government securities has been sold. The bullion is now below fifteen millions. Most of these changes, however, had been anticipated.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850 :—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,831,396	£ 19,980,175	£ 20.945,627	£ 21,806,490	£ 22,690,459
Public deposits	5,727,761	5,415,624	3,651,586	7,026,233	5,309,759
Other deposits	10,591,701	10,530,424	17,030,175	14,582,157	14,484,676
Government securities	14,296,554	11,557 114	9,559,161	10,696,147	10,171,190
Other securities	9,828,739	17,708,739	20,073,740	16,785,549	20,773,681
Reserve of notes & coin	11,185,719	5,441,741	10.193,651	12,294,022	7,511,162
Coin and bullion	16,811,159	10,139,976	15,793,696	19.294.022	14.942,502
Bank rate of discount	2½ p. c.	6 p. c.	3½ p. c.	2½ p. c.	4 p. c.
Price of Consols	96¼	93¼	95¼	95	94⅝
Average price of wheat	39s 4d	57s 11d	47s 6d	41s 7d	43s 10d
Exchange on Paris (shrt)	25 40 45	25 17½ 22½	25 12½ 20	25 7½ 12½	25 5 10
— Amsterdam ditto	12	11 13⅝ 14	11 14 14½	11 15½ 15	11 13 14
— Hamburg (3months)	13 12	13 6 6¼	13 6 6⅛	13 6¼ 6⅜	13 5 5¼

At the corresponding period of the year 1850, Parliament had just met. The Queen's Speech alluded to the quarrel, then settled, between Russia and Austria on the one side, and Turkey on the other, with reference to the refugees. It also expressed thankfulness at the preservation of order here, in face of the convulsions through which many other States of Europe had passed. The improvement in the condition of Ireland, as tested by Her Majesty's late visit to that country, was also referred to in terms of satisfaction. In France, attention was directed to the spread of socialist principles amongst the electoral body. It was noticed as remarkable that, whilst the form of government in France was nominally that of a Republic, all men of Republican sentiments were jealously excluded from power.

In 1857, a great pressure for money was experienced, leading to an increase of more than a million and three-quarters in the "other" securities within a week. One of the causes of this was an extraordinary demand for silver for the East, which caused an active drain of gold from the Bank.

In 1858, the Bank of England had just lowered their rate of discount from 4 to 3½ per cent. An Indian loan was upon the eve of issue. The political feature of immediate interest was the appearance, in the Paris *Moniteur*, of military addresses almost menacing England with invasion, *à propos* of the refugees.

In 1859, the rate of discount for the best bills was only 2⅛ per cent. Messrs Rothschild had announced their unsuccessful Austrian loan of 6,000,000*l* in a 5 per cent. stock at 80. In Paris, a pamphlet, supposed to be inspired by authority, and breathing hostility to Austria, had just appeared.

The amount of the "other" deposits, as compared with the "other" securities, showed in 1850, an excess of 762,962*l*; in 1857, a deficiency of 7,178,315*l*; in 1858, a deficiency of 3,043,565*l*; and in 1859, a deficiency of 2,203,392*l*. In 1860, the deficiency is 6,289,005*l*.

It is rarely that so sudden a change has occurred in the money market as during the present week. Reference was made in our last report to the growing impression that a continuance of the bullion drain would cause a rise in the Bank rate of discount to 3½ per cent., "if not beyond," during the present week. The efflux, instead of slackening, remained as active as ever, for, in addition to 150,000*l* taken from the Bank on Thursday and 136,000*l* on Friday, 150,000*l* was withdrawn on Saturday. Under these circumstances, an immediate advance in the rate was perceived to be inevitable, and on Monday a decided pressure set in at the Discount Office at the Bank. The banks and discount establishments, foreseeing impending stringency and a rise in the rates, were much more anxious to call in than to lend out money, whilst the mercantile public were impelled by similar considerations to apply for a large amount of accommodation. During Monday, too, the disturbance extended to the Stock Exchange, the Bank of England and other bankers throwing large quantities of Government securities upon the market for immediate delivery. The pressure at the Discount Office determined that action on the part of the Bank which had, perhaps, been already too long delayed. At eleven o'clock on Tuesday morning (an unusual day for such an announcement), the Bank of England notified that the minimum had been raised from 3 to 4 per cent. This vigorous step was received with general favour, the more especially as it is believed that, should the protection of the bullion demand still more stringent measures, they would be adopted without the slightest hesitation. The immediate effect, nevertheless, was a great, though only temporary agitation in the discount market, which reached its climax on Wednesday. The position of affairs on that day was extraordinarily disorganised. It was only by a kind of favour that, in most of the ordinary channels, bills could be negotiated. The Lombard street discount houses were occupied in preparing for the possible demands of their depositors, and generally withheld accommodation altogether, except to regular clients in the country, whose interests might be seriously compromised by the refusal. As it was, numerous parcels of bills were returned to the provinces. Paper, however good, having more than three months to run, could scarcely find takers. The pressure for money at the Bank on Wednesday, consequently, attained a degree of intensity which has not been witnessed for many months. Nearly the whole money business of the market was turned upon the Bank. The result shows that the demand was partly dictated by a fear that a fresh advance in the Bank's terms might be decided upon on Thursday (yesterday). Had the applicants continued to press with equal impetuosity for another twenty-four hours, they would probably have brought about the realisation of their apprehension. Yesterday, and to-day, however, there has been a marked subsidence of the agitation. A well grounded confidence in the stability of the general commercial position of the country has caused an immediate improvement. There is now, in all quarters, more willingness to lend. Nevertheless, no bills are taken below the Bank *minimum*, and many discounters are still so reluctant to transact fresh business that they demand more than 4 per cent. The negotiation of four and six months paper is still difficult—a feature which operates to the serious prejudice of several important branches of trade. It is hoped that the market will become easier after to-morrow (the 4th).

The disturbance experienced throughout the week, originating in the bullion drain, has unquestionably been greatly promoted by the restrictions under which the Lombard street and other money-dealers now lie. With the approach of a pressure, they are compelled to call in all their resources as rapidly as possible, since they know that the Bank of England decline to afford them any assistance, no matter how good may be the securities which they may offer.

The tightness of the money market has given an important check to the efflux of gold. On Monday, 76,000*l* was taken from the Bank for exportation; on Tuesday, 80,000*l*; on Wednesday, 30,000*l*; on Thursday, 12,000*l*; and this day, *nil*. The demand for gold for the Continent to-day was languid, but it is not impossible that a partial revival may ere long be witnessed. It is probable, however, that the tightening of the money market here may affect the American exchange in a sense favourable to this country; and a check has already been given to the drain to the East. The steamer Indus, which will leave for Alexandria to-morrow, has 258,619*l* in specie, of which 25,086*l* is gold and the rest silver. The total by the two previous packets were, respectively, 455,900*l* and 547,609*l*.

The Continental exchanges this afternoon experienced an almost general but moderate improvement.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—The demand for gold, which has continued during the past week, has for the present nearly ceased. The amount of gold for the India and China mail, of the 4th inst., is also small. The arrivals since our last (Jan. 26) have not been sufficient for the exporters, who have withdrawn 484,000*l* in bars from the Bank since that date. The Sultan has taken 19,000*l* in sovereigns to Lisbon. The Sussex has arrived from Melbourne, with 70,000*l*, which has been sent away; and the Tasmanian, from the West Indies, brings 38,500*l* in gold, which will be deliverable on Saturday, and being refinable, will of course be purchased for the Continent. The Avon is reported as having arrived at Lisbon with 6,275*l* of gold from the Brazils, and will probably be at Southampton on Saturday. The following ships are now on the way from Melbourne:—Donald M'Kay, with 148,000*l*, out 85 days; Asterope, with 20,000*l*, out 81 days; Commodore Perry, with 58,000*l*, out 78 days; Saldanha, with 64,000*l*, out 57 days; Essex, with 56,000*l*, out 56 days. In addition to the above, the Roxburgh Castle is known to have left (the precise date of her sailing is uncertain); she is reported to have at least 60,000*l* in gold; and the steamer with the Southampton portion of the Australian mail will also bring about 14,000*l* in gold, and is expected to be in on the 4th inst.

Silver.—The price of bar silver, mentioned in our last at 62⅝d per oz standard, has not been maintained, some large arrivals having taken place from Holland and France. The orders by the overland mail having been also small, the result has been that prices have gradually declined, and we now quote them as 62⅛d to 62¼d per oz standard. The Tasmanian has arrived from the West Indies with 110,000*l* in silver, which will be deliverable on Saturday; the Nepaul brings 3,864*l* in silver from the Peninsula; and the Shannon takes 5,000*l* in bars for the West Indies.

Mexican dollars remain as mentioned in our last circular. Some arrivals have been reported, and the Arabia has brought 37,000*l* in dollars from New York; we quote the price at 62¾d per oz, and the market very bare. A large proportion of the silver per Tasmanian consists of Mexican dollars, the price of which cannot be fixed yet for some days.

Exchange on Bombay and Calcutta for Bank drafts at 60 days' sight remains nominal at 2s 0½d, with very little doing; the tendency is towards lower prices, and it is not unlikely 2s 0⅜d may be the rate for the outgoing mail. Madras, 60 days' sight, 2s 0⅛d to 2s 0¼d. Documents' 1s 11½d to 1s 11⅝d to 2s.

India Government Loan Notes have suffered severely since our last, owing to the very stringent state of the money market, the fall to the lowest point having been fully 2½ per cent.—viz., from 105½ to 103. The feeling, however, at the close of to-day, is decidedly better. The depression we consider hardly warranted, and should the money market resume its former easy tone, which is fully looked for in the course of a few weeks, we have little doubt these securities will again take the stand they held at the close of last week. The adverse influence on the Bank reserve of bullion, attributed by some of the daily papers to these securities, we have no hesitation in saying has been much and very injudiciously exaggerated. We quote prices, for 5½ per Cents., 103 to 103½ (2s 0⅜d to 2s 0⅜d), 5 per Cents., 97 to 97½ (1s 11 5-16d to 1s 11 7-16d).

Quotations for Bullion.—Gold—Bar gold, 77s 9¾d per oz std; bar gold, fine, 78s per oz std; bar gold refinable, 78s 1d per oz std, last price; South American doubloons, 75s 3d to 75s 6d per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2⅛d to 5s 2⅛d per oz std; bar silver, containing 5 grs gold, 5s 2⅛d per oz std; fine cake silver, 5s 6⅛d per oz; Mexican dollars, 5s 2⅛d per oz, last price; Spanish dollars (Carolus), 6s per oz, last price; five-franc pieces, 5s 0⅛d, to 5s 0¼d per oz.

The next great event to which the attention of the commercial public is now directed, is the production of the Budget, fixed for Monday. The occasion is looked forward to with an unusual degree of interest.

The Australian mail (*via* Marseilles), which will be delivered to-morrow (Saturday) morning, is looked for with some anxiety, in consequence of the telegraphic announcement that there is much embarrassment in mercantile circles in Melbourne.

The Directors of the Bank of Egypt propose to recommend a dividend of 1*l* 15s per share at their forthcoming meeting on the 3rd March.

The prospectus has been issued of a Colonisation Assurance Corporation for promoting emigration to Western Australia, and also for acquiring and developing landed property in that settlement. The proposed capital is 100,000*l*, in 10*l* shares, nearly half of which has been subscribed, and partly applied to the purchase of lands. The company is incorporated under a special Act passed in 1850; and in their anticipations of success they lay stress upon the favourable character of the climate of the colony compared with that of other parts of Australia, and its shorter distance from England.

The Committee of Mexican Bondholders have this day received advices, *via* the United States, from their agents in Vera Cruz, dated 3rd ultimo, stating that for the whole month of December 81,421 dols. 45c had been received from the Custom House there, which were about being remitted to Mr Whitehead, in bills on Mexico. This will make the funds deposited in the capitol 566,870 dols.

The prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 1⅞ to 2 prem.; Universal Marine Insurance, ⅝ to ¾ prem.; San Paulo (Brazilian) Railway, ¼ to ⅛ dis.; Bank of Turkey, ⅜ to ⅛ dis.; and City of London Brewery Preference shares, ¼ to ½ prem. The Rio Drainage project is not being proceeded with.

At Paris to-day (Friday) the closing quotations of the 3 per Cent. Rentes were 67.80 for money, and 67.85 for the account, being ¼ to ⅜ per cent. higher than yesterday, but ⅝ to ¾ per cent. lower than on last Friday.

The Indian rupee paper closed this afternoon 1 per cent. above the lowest point of the week, but still about ½ per cent. lower than on last Fricay, the 5 per Cent. being quoted 97½ to 98, and the 5½ per Cent., 104½ to 105.

The English funds were naturally affected by the agitation in the discount market. At the lowest point Consols touched 94 to ⅛, owing to large sales by the Bank of England and other bankers. A decided rally, however, set in yesterday, and the market closed to-day at the highest point of the week, and ⅛ per cent. higher than on last Friday, Consols being quoted 94⅝ to ¾ for money and the 8th inst., and 94⅞ for the 8th of March. The public have bought upon the fall. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The railway share market was likewise depressed during the earlier part of the week, but retained a strong tendency to improvement, which was fully developed yesterday and to-day. Confidence is strengthened by the satisfactory character of the dividends, and the public invest rather than sell. To-day's closing prices, compared with those of last Friday, show a decline of ¾ per cent. in Great Western stock, ½ per cent. in London and South-Western, North

British, and Eastern Counties, and ¼ per cent. in Lancashire and Yorkshire, and London and North-Western; but a rise of ½ per cent. in South-Eastern, and 1 per cent. in North-Eastern. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

	Closing prices last Friday.	Closing prices this day.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ¼ per mille discount, and the short exchange on London is 25.05 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 4-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 421½ per mark, and the short exchange on London is 13.2⅝ per 1*l* sterling. Standard gold at the English Mint price is, therefore, 2-10ths per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108½ to 108¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold either way between the two countries.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The few samples of English wheat on sale at Mark lane, today, were disposed of steadily, at fully Monday's currency, and foreign qualities were somewhat firmin price. Although rather a large quantity of both home and foreign-grown barley was on the stands, the barley trade ruled steady, at late rates. Malt, however, was a dull inquiry. Oats, beans, peas, and flour were quite as dear as last week. The imports amounted to 870 quarters of wheat; 13,010 barley; 5,620 oats; and 670 barrels of flour.

At Liverpool, this morning, produce generally was steady in price.

The daily report of the sales in the Liverpool cotton market showed a total of 55,000 bales, but through the deliveries from the ship at spinners' direct importations, which are always included in the sales, the figure appears as large as 84,000 bales; of which spinners had 64,000, speculators 11,000, and exporters 10,000 bales. The fair qualities are already less abundant, and are, for Uplands 1-16d and for New Orleans ⅛d, quoted higher; whilst the middling barely command last week's prices, and the lower grades are decidedly cheaper. The stock is increasing, and with large shipments going on in America, and already 200,000 bales more, and 60,000 bales more from India afloat than last year, we must expect to see a very large stock in a month or two. A dearer money market must have some influence on some holders.

Messrs Briggs and Co., of Alexandria, writing on the 18th ult., state that fine cotton was dearer; but that inferior qualities were drooping in price. The total exports from the 1st to the 16th of January amounted to 8,070 bales.

Higher quotations have been paid for some kinds of tea, common sound congou having sold at 1s 5d to 1s 6d per lb; but the sales held to-day have gone off heavily.

We have received the following report from Hong Kong in reference to the tea and silk markets under date Dec. 15:—

Canton Silk—No transactions on foreign account. Prices about 10 dols higher. Tea—We have again to report a very limited business in this article, owing to the firmness of the teamen. Only one chop has arrived, and it is generally believed that the supply for this season is nearly exhausted. Stock, 39 chops. Settlements have been two chops blackish leaf, at 25 taels to 26 taels; of Tayshan congou, 2,000 half-chests, at 21 taels to 24 taels; scented orange pekoe, 6,000 boxes, at 21 taels to 30½ taels; scented caper, 12,000 boxes, at 15½ taels to 22 taels; Canton packed oolong, 1,000 half-chests, at 16 taels to 16½ taels; Canton young hyson, 1,000 half-chests, at 15½ taels. Amoy advices are to the 8th inst. In import scarcely anything has been done, and prices are rather lower. In tea the following sales are reported:—Ningyong, 2,500 half-chests, at 15½ dols to 17⅝ dols; congou, 700 half-chests, at 14.60 dols to 16 dols; caper, 2,000 boxes, at 12 dols; ankois, 1,800 half-chests, at 12 dols to 14½ dols. Foochow advices are to the 5th inst. The news from England to the 27th of September created considerable excitement in the tea market, and caused an advance of 1 to 3 taels upon the different qualities of congou. Some few settlements of low and ordinary qualities have since been made at rather lower rates, but the better kinds are firmly held. Arrivals have been moderate; stocks decreasing. Oolongs have advanced 1½ taels to 2 taels, and have been purchased freely for America, and a portion of the better qualities for England. Souchongs—Prices are fully 2 taels higher. The total arrivals to date are,—Congou, 317,000 chests, against 132,950 chests last year; souchong, 15,300, against 7,000 do.; oolong, 190,000 half-chests, against 123,000 half-chests do.; pekoe, 15,000 chests, against 2,800 chests do.; scented tea, 40 000 packages, against 15,000 packages do. Total sales,—Congou, 253,400 chests, against 117,250 chests last year; souchong, 14,900, against 6,380 do; oolong, 160,540 half-chests, against 114,000 half-chests do.; pekoe, 3,300 chests, against 400 chests do.; scented tea, 25,500 packages, against 12,000 packages do. The settlements for the fortnight have been—Congou, 21,097 chests, from 10.5 taels fur low and dusty, to 28 taels for Kaishow kinds. Souchong, 690 chests, at 24 taels to 28 taels for fair to medium. Oolong, 15,139 half-chests, at 16 taels to 23½ taels for common Foochow packed to fine cargo. A few better kinds for England. Pekoes, 112 chests common, at 30 taels. Scented teas, 2,500 boxes, at 24.29 taels fair to medium. Stocks—Congou, 40,000 chests low and ordinary to middling; souchong, 350 chests fair; oolong, 7,000 half-chests common to good cargo; pekoe, 150 chests common; scented orange pekoe and caper, 3,000 boxes fair to medium. Shanghai dates are to the 6th inst. Silk—3,000 bales settled during the fortnight. Prices remain much as last quoted, and holders are very firm. Total settlements since the 1st of July, 37,000 bales. Quotations are—

	taels		taels
No. 1 Taatlee	435	No. 1 Taysaam	360 to 365
No. 2 Taatlee	415	No. 2 Taysaam	340 to 345
No. 3 Taatlee	330 to 395	No. 3 Taysaam	330
No. 4 Taatlee	375 to 380	No. 4 Taysaam	310
Inferior Taatlee	335 to 365	Inferior Tayaaam	290 to 300

Arrivals have been small, and stocks are decreasing. Total export of silk from China to Europe is 36,838 bales, against 40,411 bales in 1858, or a decrease for this season of 3,573 bales. Tea—During the fortnight, settlements have been very limited, and at higher rates. There is very little good and fine tea in the market, and clean common is also getting scarce. Supplies are decreasing, and teamen hold for full rates. Stocks consist chiefly of common Hohows and Ningchows. The settlements have been:—Congou, Ningchow, and Oopeih, 2,000 chests, at 26 taels to 31 taels, duty paid; Sunchunki and Hohow, 1,400 chests, at 19 taels to 25 taels, duty paid. Pekoe, 1,500 chests, at 24 taels to 42 taels, duty paid. Green Teas—High prices restrict purchases. Settlements reported at 29,100 half-chests. Common and medium kinds slightly advanced in value. Arrivals are very small. Total settlements from July 1 to date are:—Black, 194,700 chests, against 32,000 chests last season; green, 276,000 half-chests, against 281,000 half-chests last season. Stock estimated at—Black, 30,000 chests, against 9,000 chests last season; green, 80,000 half-chests, against 100,000 half-chests last season. The total export from China to Great Britain is 43,651,100 lbs, against to same time last year 22,431,600 lbs, or an increase of 21,219,500 lbs for this season. To the United States the export is 19,083,900 lbs, against 14,156,300 lbs last year, or an increase for 1859-60 of 4,927,600 lbs.

For nearly all raw sugars, there has been only a limited inquiry, and, in some instances, prices have given way 1s per cwt. Refined goods have met a dull sale, at barely previous rates. At Havana, to the 8th ult., the transactions in sugar had been limited, and prices ranged from 21s 6d to 35s 11d per cwt. The stock was only 13,000 boxes.

The annexed returns are furnished by Messrs Trueman and Rouse —

IMPORTS and STOCKS of SUGAR and COFFEE at the PRINCIPAL EUROPEAN PORTS, for the Twelve Months ending 31st December, 1858 and 1859.

Annexed is a general statement of the sugar trade in the United States in 1859:—

IMPORTS.	Total tons of 2240 lbs.
At New York	177,312
Boston	31,138
Philadelphia	24,696
Baltimore	16,756
New Orleans	2,213
Other Ports	10,714
Total receipts	262,829
Add stock at all the ports, Jan. 1, 1859	13,346
Total supply	276,175
Deduct exports and shipments inland to Canada from all the ports in 1859	14,194
	261,981
Deduct stock at all the ports, Jan. 1, 1860	22,947
Consumption of foreign in 1859	239,034
Consumption of foreign in 1858	244,758
Decrease in 1859	5,724
Consumption of foreign in 1859	239,034
Add crop of 1858-59 of Louisiana, Texas, Florida, &c., the bulk of which was distributed in 1859, and assuming the stock 1st January each year to be equal	193'435
Less, shipped to California, &c., not included in foregoing statement of exports	1,285—192,150
Would make the total consumption of cane sugar in United States in 1859	431,184
Total consumption of foreign and domestic cane sugar in 1858	388,492
Increase in 1859	42,692

The value of coffee has somewhat fluctuated. On the whole, however, prices have been fairly supported. The declaration for the Dutch Trading Company's spring sale is only 331,000 bags, against 433,200 bags last year. The annexed report of the coffee trade at Ceylon is forwarded by Messrs Heale and Co., under date Dec. 30:—

Since our last issue the weather, though not settled, has been more favourable for curing operations, and exports of coffee have progressed as follows:—

PLANTATION COFFEE.				
To Great Britain	cwts 68,922	against last year,	cwts	36,013
Foreign Ports	1,262	—	—	4,214
Australia and India	4,418	—	—	2,870
	74,602			43,097
NATIVE COFFEE.				
To Great Britain	cwts 36,820	against last year,	cwts	9,884
Foreign Ports	7,162	—	—	30,463
Australia and India	493	—	—	1,503
	44,475			41,850

By recent accounts from the interior, we learn that the crops of plantation coffee have been mostly secured with trifling loss, despite the short supply of labour. The gathering is abundant in many localities, but as yet little has left the higher estates. The receipts of native coffee, during the fortnight have been comparatively small, partly owing to the holidays, and dealers have thus been enabled to maintain prices, in some instances rather higher prices being given.

The rice market has continued extremely quiet, but we have no actual charge to notice in the quotations.

The following report of the indigo market has come to hand from Messrs Moran and Co., of Calcutta. It is dated Dec. 22:—

During the last fortnight about 650 chests have been sold by private contract, and about 3,200 chests by auction, making the entire quantity out of the market up to date about 34,000 maunds. The public sales have latterly gone off briskly, and at a decline of about 5 rs per maund on consuming qualities, and even for good and fine descriptions the competition has somewhat slackened, in consequence of several orders for Russia having been withdrawn and the French and Arabs buying very sparingly. Exports of indigo from Nov. 1 to the evening of the 21st inst.:—To Great Britain, 4,545 chests; Havre and Bordeaux, 899; Foreign Europe, 43; America, 106; Gulf, &c, 97; total, 5,690 chests.

Most descriptions of fruit have maintained their previous value; but the business done has been very moderate.

Rum has somewhat given way in price, with a heavy demand. Brandy, however, has been held for further advanced rates.

English wool has ruled a shade lower, and both foreign and colonial qualities have met a dull inquiry.

Scotch pig iron has advanced to 61s 9d cash mixed numbers. Spelter is still heavy. The present stock is 3,742 tons, against 4,289 tons on the 1st of January, and 4,411 tons on the 1st of February last year. Tin is very quiet. The delivery of Banca, in Holland, in January, was 6,693 slabs; stock on warrants, 31st January, 51,368 slabs; and new stock, 82,906 slabs.

The oil market has been devoid of animation. Linseed oil, on the spot, is worth 27*l* 15s per ton. Other oils support late rates.

The imports of tobacco, last month, were 411 hhds. The deliveries were 988 hhds, against 855 hhds in the corresponding month of last year. Stock, 18,233 hhds, against 14,199 hhds in 1859; 9,728 hhds in 1858; 10,700 hhds in 1857; 9,331 hhds in 1856; and 11,174 hhds in 1855.

The tallow market has continued steady, and P. Y. C., on the spot, has advanced to 59s 6d per cwt.

"The general aspect of the domestic dry goods market," observes the New York *Shipping List* of the 18th ult., "remains without notable change, the demand being still exceedingly moderate. Purchasers from New Orleans and other Southern cities are in market and have been looking around somewhat, though they have manifested considerable backwardness in making selections, while their purchases have thus far been very insignificant. The Charleston dealers seem to take the initiative this season, they having been by far the heaviest purchasers, in anticipation of an active demand from the inland towns, &c., contiguous to that city. Foreign goods begin to be a little more inquired after, more particularly the better grades of silks, and with heavy arrivals during the past two weeks, trade has been a little more lively."

The cotton market has been less animated this week than previously, especially towards its close. Nevertheless, a large business has been done by the trade and for export. Prices, possibly owing to the increased value of money, have not quite maintained the full range of last week; and in one or two cases we have to reduce our quotations for American 1-16d per lb, but the better grades, already becoming less abundant, are slightly advanced. The medium qualities of Egyptian have been more inquired for this week, and their value, as well as that of the better, is somewhat enhanced. Brazil are mostly without change. East India have varied little. The sales to-day are 8,000 bales, the market remaining quiet. The reported export amounts to 10,360 bales, consisting of 5,170 American, 140 Brazil, and 5,050 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The advance in the value of money in the discount market has had less influence upon trade in the manufacturing districts than might have been anticipated. The transactions have, for the most part, been fair average ones, at about previous quotations. Raw material still keeps high in price, although manufacturers act with much caution. The iron market has been somewhat excited, owing to an expressed determination on the part of the masters to blow out furnaces rather than pay the advanced wages demanded by the men. Coals have sold steadily.

MANCHESTER, Feb. 2.—The Indian telegrams at the end of last week proved more favourable than at first reported, and an extensive business ensued here on Saturday and Monday. On Tuesday this market would have been in a state of extreme buoyancy had not the advance of the Bank rate interposed some check on more distant contracts. Still, dealings have to some extent been daily in progress, and rates have been extremely firm on most articles, and rather hardening on a few. As a whole the business done in January has extended to almost the limits of the production for February and March, so that little effect is apprehended from the rise in discount beyond restraining speculative irregularities. Since the year commenced, more of our common staples have been bought for China, in comparison with India, than in the same length of time for some years. Quotations are represented to have advanced during the past month, in printing cloths 3d per piece, India and China shirtings 4¼d to 5d per piece, meddapolams 1½d, jacconets 2d, longcloths 1½d. T'cloths and domestics without change.

HUDDERSFIELD.—Several representatives of shipping houses have been buying rather extensively of unions and low-priced woollens. The demand for black doeskins has again revived, and stocks of these goods in the merchants' hands are being again rapidly reduced. The demand for Bedford and woollen cords continues brisk.——LEEDS.—Inquiry was principally active in light mixtures and unions, which were cleared off at late rates, with a tendency to stiffen. Stocks remain very low in the warehouses.——HALIFAX.—There has been a fair amount of transactions in the worsted, carpet, and woollen trades; but as respects wool and yarns a good deal of caution is used, in consequence of the high prices asked.——ROCHDALE.—Wool—There was but little inquiry for wool in our warehouses generally, and prices were nominal. Flannel—Manufacturers are well employed, and insist firmly on the recent advances. The tone of the trade is still very good; home and foreign and union goods have an excellent demand.——BRADFORD.—The wool trade is becoming more depressed every succeeding week. Sales cannot now be effected at ½d per lb reduction, except in very limited quantities. The noil and short trade is in a healthy condition, and as less are now making, prices are well sustained. Yarns—The spinners are yet delivering their contracts, and for the present are fully engaged, but comparatively few new orders are offering, and those at prices which would entail certain loss to the spinner, without a very considerable further reduction in the price of wool. As yet there are no stocks of yarns in spinners' hands. Prices are too high for speculation. Pieces—In fancy goods the demand is still active, and most of the makers have orders that will keep them engaged to the end of March.——LEICESTER.—The hosiery trade continues in a healthy and satisfactory state. There are plenty of orders in the market, and the operatives are generally well employed. In the country districts also the same satisfactory state of things exists. Wools are firm, and superior qualities are realising high rates. Yarns are firm, and spinners continue well engaged.——NOTTINGHAM.—The lace trade remains quiet. The demand for the home trade has not as yet set in, and there is not much doing in the foreign department. The Germans are purchasing to a slight extent, and some of the continental houses have been doing a fair amount of business. The cotton fancy trade is dull. The silk department is not making any progress towards improvement, still there are sanguine expectations in commercial circles that trade generally will in a few weeks revive. In hosiery there is a good business doing in many branches. The home buyers who have lately been in the market have purchased liberally. Yarns continue firm.——DUNDEE.—The transactions generally are somewhat numerous, at very full prices.——BELFAST.—Inferior flax has changed hands on easier terms. Yarns, however, are firm in price. The supplies of linen have increased, and the demand has been much less active, at slightly reduced rates.——BIRMINGHAM.—The trade is brisk for the season. The factors generally speak well of the country trade, which seems to have revived much earlier than usual this year; and in the foreign trade increased animation is apparent. The number of foreign buyers about is considerable. In South Staffordshire the coal trade is brisk, the number of works in operation being so considerable that the consumption is necessarily large; there is also a good demand for domestic use. The iron trade is steady: it is only at the works where inferior iron is produced that there is any scarcity of orders. Pig iron is in good demand.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Jan. 18.—Flour—The market was heavy and less active, and the turn of the market for medium grades was in favour of the purchaser. There was little or nothing doing for export demand, while the late speculation had subsided. The sales were chiefly confined to the wants of the domestic trade. The sales embraced 8,000 to 9,000 brls. Canada flour was firmly held, with sales of 300 bbls, at 5 dols 70c to 6 dols 85c, with small lots extra reported at 7 dols. Southern flour was heavy, while the sales footed up about 1,500 bbls. Wheat was active and buoyant. The sales embraced about 11,000 bushels, including Milwaukee Club in store at 1 dol 22c, with Chicago spring at 1 dol 20c, and included in which were 6,000 bushels choice red Southern, at 1 dol 35c. Corn was heavy and lower, but more active, with sales of about 30,000 bushels, including Jersey and Southern yellow, at 83c to 84c for Jersey and Southern yellow, and at 83c to 83½c for white ditto.

NEW YORK, Jan. 21.—Flour—The market for State and Western brands were dull and heavy, while the sales were limited, being confined to about 6,000 bbls. Canadian flour was steady and in fair request, with sales of 275 bbls, at 5 dols 70c to 7 dols for extra. Southern flour was more active, but for some descriptions at rather easier rates. Wheat—The market was steady, and prices sustained. Corn was heavy and easier, while the sales reached about 27,000 bushels.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Notwithstanding that only moderate supplies of home-grown wheat have been on offer in most of the leading markets of consumption, no improvement has taken place in the demand for any description. The best samples, from their scarcity, have changed hands at full prices; but other kinds have moved off somewhat heavily at barely late rates, and the most inferior descriptions have been taken by the starch-makers. The transactions in foreign wheat have been somewhat restricted, although the imports have continued on a very moderate scale. However, holders have ruled firm, and prices have been supported. Fine malting barley has been scarce, and in request at full currencies, whilst grinding and distilling sorts have commanded previous rates. The malt trade has ruled heavy on former terms. In oats, no sales of importance have been reported, but both beans and peas have moved off freely at very full prices. The flour trade has continued steady.

The future course of the wheat trade is likely to suffer somewhat from the present upward movement in the value of money for discount purposes. We have already shown that the stocks of foreign grain in warehouse in this country are very large; and, as there is every prospect of an early reopening of the Baltic navigation, many holders may be compelled to sell largely, and thereby produce additional heaviness in the trade.

Most of the continental markets have been tolerably firm for wheat, at full prices. Spring corn, too, has commanded previous rates; but flour, owing to the want of demand for export purposes, has ruled somewhat heavy. In the United States, produce generally has met a slow inquiry. The stock of flour at New York is about 1,500,000 barrels.

In Scotland, wheat, and, indeed, most other kinds of produce, have moved off steadily, at full quotations.

The Irish markets have continued in a very inactive state. In prices, however, no change of importance has taken place.

There was rather more inquiry for both English and foreign wheat here, to-day, and prices were well supported. All kinds of barley were quite as dear as on Monday, but inferior malt was rather cheaper. Oats, beans, peas, and flour were tolerably firm.

Mr Ed. Rainford states that ten vessels have arrrived off the coast since the 25th ult. laden with grain, and that the demand continues limited.

The London averages announced this day were:—

	qrs	s	d
Wheat	3723 at	43	8
Barley	4388	31	10
Oats	2619	20	5
Rye	3	28	0
Beans	279	34	7
Peas	180	32	8

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There have been few public sales, but the market, up to yesterday, presented the same quiet appearance as on Friday last. Prices, however, have experienced little alteration, and the importers generally remain firm. The most striking feature to remark has been the purchase for this country of several floating cargoes of Mauritius sugar, which were shipped to France. Strong refining sugars maintain their former value, notwithstanding the very moderate demand. Only 1,330 casks West India had changed hands to yesterday (Thursday). 368 casks Barbadoes, by auction, went at 37s to 45s 6d. 201 casks Jamaica: brown to middling grey, 39s to 41s 6d per cwt, being cheap. The week's delivery amounted to 4,606 tons, and the stock is 54,550 tons, against 52,050 tons in 1859.

Mauritius.—There have been five floating cargoes originally sold on French account taken for this kingdom, of which particulars do not transpire; also one of 6,000 bags, No. 12 to 12½, shipped direct here, at 44s 6d. 1,500 bags are also reported on the spot. 1,651 bags by auction went at 44s to 46s 6d per cwt for grainy refining sorts.

Bengal.—No public sales were held to yesterday.

Madras.—250 bags soft pasty were bought in at 34s. Privately, 1,700 bags Jaggery have realised 30s per cwt.

608 bags Natal partly sold at 36s to 39s for brown, up to 45s 6d per cwt for good bright yellow.

Foreign.—2,108 baskets 270 bags Java have been disposed of at 45s 6d, equal to No. 13; and 700 baskets to arrive from Holland at 25s 6d in bond, No. 9.

Refined.—The market is very unsettled, and prices show rather a downward tendency, although the refiners generally do not seem anxious sellers. Common goods may be quoted 51s; middling to fine, 51s 6d to 52s, up to 54s per cwt for fine. Crushed and pieces nearly maintain their late value.

RUM.—Common descriptions attract more attention. Demerara has sold at 2s to 2s 2d; Mauritius at 1s 7d, and 1s 7½d now generally demanded; good Leewards, 1s 10d per proof gallon. A few sales are reported in Jamaica at previous rates. The stock amounts to 27,340 puns 5,920 hhds, against 24,500 puns 4,200 hhds last year at the same period.

COCOA.—416 bags Grenada partly sold: ordinary to good, 58s to 64s. 200 bags Trinidad were withdrawn above the value, this description being scarce. 100 bags Dominica were bought in at 60s, and 45 bags Surinam at 74s to 78s per cwt, since sold at 2s less.

TEA.—A firm tone continues to pervade the market, and the dealers have paid rather higher rates for some kinds of congou. Common is in demand at 1s 5½d to 1s 5¾d per lb. Many public sales will be held, commencing this day.

COFFEE.—The Dutch Company's spring sale next March will probably comprise about 330,000 bags, or 103,000 bags less than last year. This announcement has not produced any material influence upon the market, but rather a better demand now prevails, especially for native Ceylon, of which 2,000 bags have sold by private contract. 1,100 bags 32 casks 29 barrels at public sale went at 58s to 60s 6d. 860 casks 643 barrels and bags plantation nearly all sold at about the former value: pale and dull mixed sorts, 61s to 66s; low middling to good, 67s to 81s. 973 bags Costa Rica were brought in at 62s to 72s for good ordinary to low middling. 148 bags African were partly sold: small brown berry at 97s per cwt. The stock in London is 7,147 tons, against 7,520 tons last year at the corresponding date. Deliveries for consumption are rather above those of 1859, and the exports have been more than double.

RICE.—Transactions in parcels on the spot have been remarkably small, as little inquiry prevails for any kind. 2,730 bags new Ballam at public sale were bought in at 9s 6d to 10s, and since sold at 9s 6d per cwt.

IMPORTS and DELIVERIES of RICE to January 28, with STOCK on hand.

	1860. tons	1859. tons	1858. tons	1857. tons

SPICES.—At the quarterly cinnamon sales, held on Monday, 2,030 bales Ceylon nearly all found buyers, and prices showed little variation: 1st sort, 1s 5d to 2s 5d; 2nd, 1s 5d to 1s 8d; 3rd, 10d to 1s 4d; 4th, 7d to 1s. 593 bags Alleppy pepper realised 5d to 5⅝d, being full prices. 720 bags black Singapore of fair quality were taken in at 4⅜d; and 125 bags Singapore white at 7⅜d. Nothing of importance has been done in either description by private treaty. 495 bags rough Bengal ginger were bought in at 25s per cwt. A good business has been done in cloves privately at 3 15-16d to 4d, and 115 bags by auction were held at 3⅞d to 4d per lb for common quality.

SALTPETRE.—Several public sales held on Tuesday rather unsettled the market, but importers generally showed firmness, and 2,524 bags Bengal partly sold at rather easier rates for fine, viz., 42s to 42s 6d, refraction 4⅜ to 3; the remainder taken in at the full value. 1,493 bags low Bombay, refraction 45⅜ to 34¼, sold from 31s 6d to 32s per cwt. Few transactions have taken place by private contract.

IMPORTS and DELIVERIES of SALTPETRE to January 28, with STOCKS on hand.

	1860. tons	1859. tons	1858. tons	1857. tons

Stock	4060	3510	6300	2000

NITRATE OF SODA is quiet at 15s 6d per cwt.

COCHINEAL.—285 bags were brought forward on Wednesday, when the market was flat, and a small proportion only sold at the previous value, viz., Honduras silver, 3s 2d to 3s 8d; black, 3s 9d to 4s 2d; Teneriffe silver, 3s 5d to 3s 6d; black, 3s 7d to 4s per lb.

LAC DYE.—No further sales of importance have taken place, but the market is very firm, and some holders will not sell unless at still higher prices. The stock is 10,600 chests, against 12,470 last year, 13,000 chests in 1858, and 13,700 chests in 1857.

INDIGO.—Declarations for the sales next Tuesday reach 7,520 chests, being below the usual quantity. The present stock of 13,300 chests is smaller than for many years past. The market remains firm at the recent advance established.

OTHER DYESTUFFS.—Small parcels of Gambier have sold at 16s to 16s 6d for good to fine. Cutch, in public sale, brought 28s to 28s 6d 200 bales Bengal safflower partly found buyers at 7*l* 2s 6d to 12*l* 2s 6d per cwt for ordinary to good quality.

METALS.—The principal feature to notice in the market has been the rise upon Scotch pig iron occasioned by the expected closing of the works in some parts owing to the strike; 61s 9d was paid on Wednesday, but the latest sales have been at 60s 9d to 61s per ton. 50 tons of spelter have sold at 21*l*. The present stock of 3,740 tons is nearly 700 tons less than at same date in 1859. Foreign tin remains quiet. Banca has been sold at 137s; Straits quoted 132s per cwt. English is 2s to 4s per cwt lower. Copper firm. In lead, a steady business has been done.

HEMP.—A parcel of St Petersburg by auction realised 27*l* 5s to 27*l* 10s. There is more inquiries made for Manilla. 860 bales by auction were taken in above the value. 4,500 bales jute offered on Wednesday went with more animation, some of the common marks being rather dearer. Low to good quality ranged from 12*l* 2s 6d to 18*l* 10s per ton.

LINSEED.—Arrivals have been rather light. Floating cargoes of new Odessa and Taganrog are quoted at 50s to 50s 6d per quarter.

OILS.—Sperm has supported the advance of last week. Cod cannot be bought under 35*l*. Olive is rather scarce. Gallipoli held at 59*l* 10s to 60*l*; other kinds quoted 50*l* to 54*l* per tun. Palm is dearer, owing to the rise in tallow. 240 casks by auction sold at 41s 9d to 46s 6d. Cocoa-nut keeps very firm: Ceylon has sold at 42s to 43s 9d; Cochin, good to fine, 45s to 45s 6d. The market for linseed oil, which was quiet during the week, has since become firmer, with sales at 27s 6d to 27s 9d, and 28s for forward delivery. Transactions to a moderate extent only have occurred in rape.

TURPENTINE.—4,000 barrels rough have been sold at 9s 3d to 9s 6d. American spirits quiet, and quoted 35s 6d to 36s per cwt.

TALLOW.—The market is 6d to 9d higher, and the Russian speculators keep very firm. A steady demand has prevailed by the trade here, and quotations of foreign have advanced 3d to 6d. First sort Petersburg Y. C. on the spot, 59s 6d to 59s 9d; March, 59s 9d to 60s; for delivery in the last three months, 53s 6d per cwt.

PARTICULARS OF TALLOW.—Monday, January 30.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market was inactive to-day. 800 bags grocery Madras realised full prices, selling from 44s 6d to 47s. 1,315 bags of old import were chiefly bought in, there being no fair offers made. 420 casks Porto Rico found buyers: brown, 38s 6d to 41s; yellow, 41s 6d to 46s 6d. 1,450 casks West India have changed hands during the week. Privately, 9,500 bags Manilla have sold from 32s 3d to 34s. 2,000 bags Gurpatta date at 42s to 45s per cwt, and some other parcels of colonial.

TEA.—Of 23,810 packages brought forward in the sales to-day, 12,150 passed, and 7,600 sold without change in value.

COFFEE.—987 bags fair native Ceylon were sold at 59s to 59s 6d. 190 half-bales 28 quarter-bales Mocha, of indirect import, were taken in at 100s to 120s per cwt.

RICE.—2,742 bags Bengal partly sold: broken to fair Dacca, 9s 6d to 10s; Ballam, 9s 6d; a few lots 10s per cwt.

SALTPETRE.—480 bags Bengal were partly sold: refraction 9 at 39s 6d. 1,200 bags sold privately.

SPICES.—395 bags Malabar ginger were chiefly bought in at 35s; 200 bags African at 37s; 36 barrels Jamaica realised 4*l* 16s to 5*l*. 528 packages cassia vera were bought in at 19s to 22s per cwt; and 100 bags pimento at 4½d per lb.

CUTCH.—828 bags Pegue sold: sound, 28s; heated, 26s to 27s per cwt.

TALLOW.—Town was advanced to 61s 9d per cwt.

ADDITIONAL NOTICES.

GREEN FRUIT.—Demand continues good, but large arrivals of oranges prevent an advance in price, cargoes of which, sold by Keeling and Hunt at public sale, went at prices equal to those of last week. Valentia oranges sustain their value, this description of fruit being in repute. Lemons slightly lower. Nuts of all kinds without alteration. Seville sours higher.

ENGLISH WOOL.—The trade very quiet; prices in favour of buyers.

COLONIAL AND FOREIGN WOOL.—The market is firm, and without change.

FLAX unaltered.

HEMP.—Market quiet, and but few transactions to report this week.

COTTON.—Sales of cotton wool from Friday, 27th Jan., to Thursday, 2nd Feb. inclusive:—700 bales Surat, at 3¾d to 5 7-16d for ordinary to good fair; 1,300 bales Madras, at 4 7-16d to 4½d and 9-16d for middling fair to fully fair Western, and 4¾d to 5⅛d and ⅝d for middling to fully good fair Tinnivelly. There has been a good demand, and a steady business has been transacted at the full prices of last week. 85 bales African and 268 bales Carthagena cotton are advertised for public sale on Thursday next, the 9th inst. P.S.—Sales to-day, 300 Surats at previous rates.

SILK.—The silk market continues quiet, without, however, any change in prices.

TOBACCO.—The market has remained without alteration for good to fine descriptions, with sales of rather a limited character. Ordinary sorts neglected.

LEATHER AND HIDES.—Although the leather trade of the past week has been rather less active than in the earlier part of the month, the demand has fully equalled the supply, and prices remain firm. At Leadenhall, on Tuesday, the articles most in request were good English butts, heavy harness hides, common dressing hides, and good shaved hides, calf skins, and English horse hides. Not any public sales of foreign raw hides have occurred this week, but by private contract the sales include 11,700 Australian hides, Melbourne, first heavy, 5⅝d to 5¾d; first light, 5¼d; seconds, 4¾d to 4¾d. 300 River Plate, Rosario, hides, 62 lbs, at 8½d; 100 Buenos Ayres cow, 43 lbs, at 8¼d; and the 2,329 Rio Grande, offered at the public sale, consisting of 274 light ox, 44 lbs, 2,021 cow, 46 lbs, at 7¾d; and 34 damaged, at 6½d.

METALS.—The altered position of the money market has caused some stagnation. Copper is quieter in demand, but prices are unchanged. Iron is rather quiet for manufactured; but there is excitement and high prices in Glasgow pig, in consequence of a dispute between masters and men. Tin has fallen in prices of English 2*l* per ton on common, and 4*l* per ton on refined to-day, the market having been quiet all the week. Spelter is flat, and 21*l* per ton was accepted yesterday. Lead keeps firm, but few new transactions have been entered into. Tin plates are a trifle easier to buy.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	61	9
Fat by ditto	3	3
Yellow Russian	61	6
Melted stuff	42	6
Rough ditto	25	0
Greaves	15	0
Good dregs	7	0

Imports this week 68 casks.

METROPOLITAN CATTLE MARKET.

THURSDAY, Feb. 2.—About an average supply of beasts was on sale here, to-day, in good condition. Nearly all breeds moved off slowly, yet Monday's prices were well supported. We were tolerably well supplied with sheep. Prime Downs and half-breds realised full currencies, with a steady trade. Other descriptions of sheep were less active, on former terms. The few calves on offer sold steadily, at fully previous rates—the top quotation being 5s 10d per 8 lbs. Pigs were in fair request at extreme quotations.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	4	5	6
Second quality ditto	3	8	4	2	Large coarse calves	4	10	5	4
Prime large oxen	4	4	4	8	Prime small ditto	5	6	5	10
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto	4	4	4	8	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	23	0	30	0

Total supply—Beasts, 1,121; sheep, 3,250; calves, 120; pigs, 312.
Foreign supply—Beasts, 120; sheep, 700; calves, 70.

NEWGATE AND LEADENHALL.

FRIDAY, Jan. 3.—The supplies of each kind of meat are moderately extensive. Trade generally is steady, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	6	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	4	5	0	Small pork	4	4	5	0

HOP MARKET.

BOROUGH, Monday, Jan. 30.—Our market has remained steady, fine samples fully maintaining recent quotations. There is more inquiry for brown Mid Kents, of which considerable sales have been effected, at full value. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Feb. 3.—A good trade is doing in hops at full prices.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Jan. 30.—During the past week the arrivals coastwise have been more liberal. Towards the end of the week prices began to decline, the supply being more than equal to the demand. The following are this day's quotations:—York Regents, 100s to 130s; Lincolnshire ditto, 90s to 100s; Dunbar ditto, 110s to 125s; Kent and Essex, 90s to 100s; Perth, Forfar, and Fifeshire ditto, 90s to 105s; ditto Rocks, 75s to 85s; ditto reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 65s to 70s per ton.

THURSDAY, Feb. 2.—The supplies of potatoes are still limited at this market, although they have somewhat increased since Thursday last. There are no foreign in the market. Trade is generally good, and prices firm. York Regents, from 140s to 150s; ditto Flukes, 130s to 140s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 80s to 95s; Lincolns, 120s to 140s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 10s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. A steady trade.

WHITECHAPEL.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 10s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. Trade firm.

COAL MARKET.

FRIDAY, Feb. 3.—Wall's-end:—South Hetton 21s 6d—Eden Main 20s—Hetton 21s 9d—South Kelloe 21s—Tanfield Moor Bute's 14s—Bebside Hartley 15s 3d—Howard's Hartley 15s 3d. Ships at market, 37.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 3.—Public sales have been in progress here since the 25th ult., and drawn together a large concourse of buyers, who have competed with spirit for all current descriptions of foreign, and, in some cases, higher prices have been paid than at the last auction sales in October. For English and Scotch there is still very little demand, but holders are pretty firm.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 3.—Grain market steady. Wheat in moderate demand at Tuesday's rate. Flour unaltered. Indian corn firm at the advance. Sound Ibrail, 32s; Galatz, 33s; oats and barley in fair retail demand; oatmeal steady.

METALS

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 3.—There is little or no change to report this week in manufactured iron. In Scotch pig iron there has been considerable excitement throughout the week, owing to an apprehension of a strike by the miners and colliers taking place; speculative transactions have been the consequence to some extent, and prices have advanced 2s to 3s per ton. Copper still manifests much firmness. Tin has, however, just been reduced in price 2*l* per ton on common, and 4*l* per ton on refined. For lead there has been some activity of demand at higher rates. Other metals without change.

The Gazette.

TUESDAY, Jan. 31

BANKRUPTS.

C. Lambourn, Chiswick, and Salisbury wharf, Strand, barge builder.
A. Worman, Minories, and Alfred street, Bow road, boot manufacturer.

EPITOME OF RAILWAY NEWS.

STOCKTON AND DARLINGTON.—It appears the directors of this company intend to declare a dividend at the rate of 9 per cent. per annum for the half-year ending the 31st December last, making, with the dividend declared for the preceding half-year, 9¼ per cent. for the year 1859.

RAILWAY BILLS.—It appears from a report by the Board of Trade that the number of bills relating to railways in Great Britain deposited this session amounts to 202, of which 149 are for authorising new works. Of the 149 bills, 90 are promoted by new railway companies for the construction of 1,048 miles of railway, and 59 by existing companies for the construction of 358 miles of railway, making together 1,406 miles of new line, and in addition to which there are 106 miles of deviation lines. Of the 90 bills promoted by new companies, 71 are for the construction of 714 miles of railway in England, 6 for the construction of 97 miles in Scotland, and 13 for the construction of 237 miles in Ireland. Of the 59 bills promoted by existing companies, 43 are for the construction of 257 miles of railway in England, 6 for the construction of 35 miles in Scotland, and 10 for the construction of 66 miles in Ireland. For railways in the metropolis and suburbs there are 24 bills.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending January 21 amounted to 454,350*l*, and for the corresponding week in 1859 to 418,680*l*, showing an increase of 35,670*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 193,107*l*, and for the corresponding week of last year to 178,730*l*, showing an increase of 14,377*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Jan. 30.—The railway market this morning experienced a general decline, from which there was scarcely any recovery. The movement was chiefly due to speculative sales, the public bringing little or no stock into the market. Indian guaranteed shares, notwithstanding the fall in the Government stocks, showed only an occasional reduction. Atlantic and St Lawrence and Grand Trunk of Canada declined, the latter closing 34½ 35, while Great Western were firmer. In the foreign market there was increased depression, especially in Lombardo-Venetian. The new San Paulo were again without change at ¼ to ⅜ discount. American securities have been dull, and a fall took place in the shares of the New York and Erie. Mines and joint stock banks exhibit a less steady tendency. Miscellaneous descriptions closed about the same as on Saturday.

TUESDAY, Jan. 31.—The railway market was again depressed during the earlier part of the day, but recovered towards the close, Midland and Lancashire and Yorkshire showing a fractional advance over yesterday, and most of the other leading British stocks leaving off without alteration. The general business was limited, the dealers being chiefly occupied with the final arrangement of the fortnightly settling. In the colonial market there was a further slight reaction in Indian guaranteed, while Grand Trunk of Canada stock was firmer at 34¾ to 35¼. Foreign shares were heavy in the morning, but better in the later hours of business. Pernambuco have declined an eighth; Lombardo-Venetian showed an improvement; and San Paulo were rather flatter. No change of importance occurred in American securities or joint stock banks. Mines were dull, and in a number of cases exhibit a reduction.

WEDNESDAY, Feb. 1.—Business in the railway market was on a limited scale, but in several cases a slight advance is shown. North British especially improved ¾ per cent. Caledonian and Eastern Counties, on the other hand, receded ½, and Midland was heavy on the announcement of the proposed dividend. In colonial descriptions, Grand Trunk of Canada improved. Foreign shares were generally firmer, except Lombardo-Venetian, in which the rise of yesterday has been lost. Pernambuco rallied to 1⅛ to ¼ discount, while San Paulo left off without alteration at ⅜ to ½ discount. In American securities the shares of the Illinois Central declined 1 dol. The principal operations in mines were in St John del Rey at slightly higher prices. The market for joint stock banks has been steady; Commercial of London marked par ex dividend. No change of importance occurred in miscellaneous descriptions. The new Canadian loan has been in demand, and advanced to 2⅛ to ¾ premium scrip, and 100¼ bonds.

THURSDAY, Feb. 2.—The railway market experienced a further advance, especially during the later hours of business. American securities showed a downward tendency, especially those of the Illinois Central and New York and Erie Railways. Mines were firm; General of Nova Scotia improved 10s Joint stock banks have been in fair demand, the chief inquiries to-day being for London and County. In miscellaneous descriptions, a rise occurred in Canada Land, and a decline in Electric Telegraph and Mediterranean Extension.

FRIDAY, Feb. 3.—Increased buoyancy was apparent in the railway share market, and prices have shown an upward tendency. Joint stock bank nd miscellaneous shares have been in fair request at former rates.

The Economist's Railway and Mining Share List.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER 228 Piccadilly, London

HOLLOWAY'S OINTMENT AND PILLS.—Neuralgia and Rheumatism.—No diseases are more frequent, painful, or difficult to cure than these; from their attacks no tissue in the human body is exempt,—no age, sex, or calling secure. They compel the gentleman to forego his amusements, the merchant his business, and force the woman to neglect her social duties. It is a blessing which scarcely dare be told for fear of being taxed with partiality or exaggeration, that all these sufferings may be completely and expeditiously subdued by Holloway's Ointment and Pills, which, for the last quarter of a century, have been found invariably to cure these maladies.

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 360 Oxford street, London. Principal: Wm Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included
Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d. 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

THE NEW FRENCH REMEDY (Protected by Her Majesty's Royal Letters Patent), is specially prepared by the "ECOLE PHARMACIEN, PARIS," for effectually restoring the Nervous and Debilitated to a state of Vigorous Health and Manhood, when the system has been weakened by the Errors of Youth, or from any other cause. A Packet of this truly marvellous Remedy will be sent, free from observation, to any address, on receipt of 14 postage stamps.—Address, stating particulars, to Mons. DUVAL, Patent Medicine Agent, Birmingham.
NOTICE.—A Medical Book on the above Diseases, showing sufferers how they may safely cure themselves, free by post for one stamp to prepay postage.

Just published, in 1 vol. 8vo, with numerous Anatomical Plates, post free, on receipt of six penny stamps,
VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.
By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).
Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
Mr CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr CURTIS having been demonstrated by a successful practice extending over a period of 20 years, nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

RAIL PAID TO ANY STATION IN ENGLAND.

VERY CHOICE MARSALA OR BRONTE WINE.

THOMAS NUNN and SONS have great pleasure in bringing this excellent yet economical Wine to the notice of their customers; the approvals of it continue numerous and most flattering; it is of the highest quality well matured and full-bodied, and so thoroughly clean tasted that it will go on improving for years to come; and has this advantage over Sherry, that it may be taken by the most delicate person without causing acidity in the stomach. Their selections have been made with so much care, that they have no hesitation in saying the most perfect satisfaction will accrue to every purchaser.

30s per doz. £8 14s per 6 doz. £15 10s per ¼-cask.

From THOMAS NUNN and SONS, Wine, Spirit, and Liqueur Merchants, (upwards of 43 Years Purveyors o the Honourable Society of Lincoln's Inn,) 21 Lamb's Conduit street, Founding Hospital.

*** A Priced List of every kind of Wine, Spirit, and Liqueur sent on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

ATTIRE FOR THE SEASON.—

LAWRENCE HYAM has to announce his preparations for the Autumn and Winter. Gentlemen will now find his stock of Garments for immediate wear complete in every department. The productions of the various manufacturers exceed, in variety of design and material, all those of former years.

LAWRENCE HYAM'S OVERCOATS,

of the latest fashion, comprising the Inverness Cape, the Albert, the Clarendon, the Sac, &c., are made from the most suitable materials, and in the strongest manner. 21s, 30s, 42s, 50s.

LAWRENCE HYAM'S

Walking, Dress, and Surtout Coats,—sound in material and make, exact in fit, and fashionably designed and finished.—Surtout and Dress Coats, 26s to 60s. Walking Coats, from 14s to 35s.

LAWRENCE HYAM'S VESTS

in Cloth, Silk, Satins, Tweeds, &c., either for ordinary wear or dress purposes, faultless in design and material, varying in price from 4s 6d to 21s.

LAWRENCE HYAM'S TROUSERS,

celebrated for their true and comfortable fit, made of the strongest and newest fabrics.—Prices, 10s 6d, 12s, 14s 6d, 17s, 21s.

City Establishment, 36 Gracechurch street; West-end Establishment, 189 and 190 Tottenham court road

ECONOMY AND EXCELLENCE.—

E. MOSES and SON, Merchant Tailors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules forself-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—

LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).

COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT,

made of various colours and patterns, particularly adapted to walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

GOOD NEWS FOR SMOKERS.—

NO PUFFING REQUIRED.—Buy the new Patent MEERSCHAUM DUST BILLIARD PIPE, the most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. "Man wants but little here below," but that little must be the most perfect short pipe that can be got, and it only CAN be got, with all its rapidly colouring advantages, at the "Waterloo" Tobacco and Pipe Establishment, 193 Waterloo bridge road —Sample pipe in case sent post free for 28 stamps.—EDWARD PILLINER, Patentee.

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST,

52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

KEATING'S COUGH LOZENGES.

—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Cainscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, Sir, your most obliged servant, W. J. TAIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL

administered with the greatest success in cases o CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,

ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH

AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

EUROPA, for BOSTON, Saturday, Feb. 11.

*AFRICA for New York direct, Saturday Feb 18.

Offices, 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

DR KAHN'S MAGNIFICENT

ANATOMICAL MUSEUM, top of the Haymarket (acknowledged by the whole of the Press to be the most useful and instructive of any in existence), is open daily for Gentlemen only, from 12 till 5, and from 7 till 10. Admission One Shilling. Descriptive handbooks gratis. Dr Kahn's Popular Lectures on the "Philosophy of Marriage," daily at 3 and 8 o'clock precisely. Syllabus—Happy and Unhappy Unions, and their causes—Youthful Vices and Indiscretions, and their results—Disqualifications for Marriage, and their cure—the Physiology of Reproduction—Self-inflicted Miseries—Sterility and it causes—How to Secure Moral and Physical Happiness.

N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the author, Harley street, Cavendish square, W.

FENDERS, STOVES, FIRE-IRONS, and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d

It contains upwards of 400 Illustrations of his illimited stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1a, 2, and 3 Newman street; and 4, 5, and 6 Perry's place, London.—Established 1820.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Ooree Piazzas, Liverpool.

THE COLONISATION ASSURANCE CORPORATION, incorporated by Special Act of Parliament, A.D. 1850: which confers on the Corporation the following highly-important privileges:—

A bounty of £20 receivable for each emigrant conveyed to the colony of Western Australia.

Liability of each proprietor limited to the amount of his subscription.

Power to purchase, exchange, and surrender lands.

Power to hold lands to any extent.

Power to sell lands either for cash or under the life assurance principle.

Power to confer by lease or license the rights of mining, quarrying, &c., or any other right or privilego on any lands belonging to the Corporation.

Capital, £100,000, in 10,000 shares of £10 each. With power to increase the same to £600,000 with the consent of the Lords of the Treasury.

Nearly one-half of the capital has already been subscribed for, and the proceeds applied in the purchase of lands and otherwise for the purposes of the Corporation, which is possessed of 109,000 acres of land in the colony of Western Australia. The remainder of the capital is now offered for public subscription.

Deposit, £2 per share, of which 10s is to be paid on application, and £1 10s on allotment. No call to be made at intervals of less than six months between each call. Any proprietor desirous of paying up his shares in full will be at liberty to do so.

TRUSTEES.

SECRETARY—B. R. Pemberton, Esq.

OFFICES—3 Cannon street, London, E. C.

This Corporation was created A.D. 1850, by special Act of Parliament, known as "The Colonisation Assurance Corporation Act, 1850," and the business or purpose thereof defined by the said Act to be—

"To purchase, to exchange, to surrender, and either for cash or for annual or other periodical payments, either determinable or not determinable with life, or for other considerations, to sell lands, tenements, and hereditaments in the colonies and dependencies of the British Empire, or any or either of them." And also,

"To carry forward emigration to the colonies and dependencies aforesaid, or any or either of them, to conveyed or procure to be conveyed thither emigrants, and to obtain the premiums or bounties, whether in money, land, or land scrip, which shall become due; and such other profits or remuneration, if any, from any source whatsoever as can be obtained for, or by reason or means of the introduction or conveyance of such emigrants as aforesaid."

It is further provided—That the operations of the Corporation shall be confined in the first instance to the colony of Western Australia, and the Act entitles the Corporation to a bounty of £20 sterling, payable in land scrip, for each emigrant, whether male or female, they convey or procure to be conveyed from Great Britain or Ireland above the age of 14 years, and the like amount for every two emigrants between the age of one and 14 years.

Immediately on the Act of Parliament being obtained, all necessary arrangements were made for carrying out the objects of the Corporation, and a number of emigrants were dispatched to Western Australia, when the discovery of gold in the neighbouring colonies caused the Corporation to suspend its course of action, until the excitement attending such discovery was allayed. The Directors are now of opinion that the period has arrived when its operations may be resumed with advantage, and as soon as the necessary capital is provided, steps will be taken to continue the dispatch of emigrants to the colony and otherwise to prosecute the undertaking.

The geographical position, climate, soil, and great resources of Western Australia, of which Perth is the capital, have of late received much attention. It is 3,600 miles nearer the mother country than Sydney, and its proximity to the Cape, Mauritius, Ceylon, India, China, and Singapore, has already been productive of vast benefits to the colony. The climate is acknowledged to be one of the finest in the world, and is free from droughts. The soil embraces every variety and is well suited for agricultural purposes. The vine is grown extensively, yielding wine of most excellent quality; wheat, barley, potatoes, and other esculents, are produced in abundance, and the various pastures and plentiful supply of water with which the colony abounds, render it admirably adapted for grazing purposes.

The colony embraces a territory of about 1,000,000 square miles, and a sea-board of 2,500 miles, offering an extensive field for the operations of the Corporation. Rich mines of copper and lead are now being worked, and it is believed that gold will be found in Western Australia, as it contains a parallel range to the great dividing chain in New South Wales, of which the geological character is precisely similar.

The timber of the colony is an article of considerable commercial importance, admirably adapted for shipbuilding, railway and other purposes, consisting of the Jarrah, Tuart, and other fine woods:—the qualities of both the Jarrah and Tuart are highly approved by the Admiralty and Lloyd's. The Jarrah, which is to be procured in West Australia alone, possesses the peculiar property of being impervious to the attack of the white ant, it is therefore much sought after for railway sleepers in India and elsewhere. This tree grows in abundance upon the lands of the Corporation, the greater portion of which are about 20 miles from Perth and Freemantle, the principal towns of the colony. The value of these lands and the timber thereon may be fairly estimated at £50,000.

It is proposed to apply the principle of Life Assurance to the operations of the Corporation in the disposal of land, by offering to emigrants and others the means of acquiring land without the necessity of immediate cash payments for the same. This will be effected by their paying an annual premium in addition to the rent to cover the value of the property to be acquired; provided such annual premium and rent be regularly paid during life, their representatives will at their death become entitled to the land with all its improvements.

The income of the Corporation will be derived from numerous sources; amongst which may be enumerated the following, viz.:—

The sale or investment of land scrip obtained as bounty
Sales of land for cash.
Sales of land under the life assurance principle.
Leased lands.
Licences for mining, quarrying, cutting timber, &c.
Reserves of town and suburban lots, &c.

A regular and continuous stream of emigration will be secured by means of "Assisted Passages," intended to be granted to eligible emigrants; the advances so made to be afterwards repaid to the Corporation under liberal regulations. As each emigrant so aided will earn for the Corporation £20 land scrip, the beneficial result of the operation is obvious. This "land scrip," which is available as money for the purchase of Crown lands in the colony, will be a constant and fruitful source of profit to the Corporation. Reserved town and suburban lots realise from £10 to £40 per acre, and upwards, and as the northern portion of the colony abounds in copper and lead, an investment of land scrip in that locality will be highly advantageous.

Application for the unallotted shares may be addressed in the accompanying form to Mr B. R. Pemberton, Secretary, at No. 3 Cannon street, City, to Messrs Field, Son, and Wood, No. 9 Warnford court, Throgmorton street, or to Charles Watson, Esq., No. 2 Royal Exchange buildings—brokers to the Corporation.

Each application must be accompanied by a deposit of 10s per share, and a further sum of £1 10s will be required on allotment, and no calls will be made at intervals of less than six months.

FORM OF APPLICATION FOR SHARES.

To the Court of Directors of the Colonisation Assurance Corporation.

GENTLEMEN,—Having this day paid into the hands of your bankers the sum of £ . I hereby request that you will allot me shares of £10 each in the above Corporation, and I hereby agree to accept the same, or any less number which may be allotted to me, and pay the remainder of the deposit of £2 per share on the shares allotted, and to execute the Deed of Settlement of the Company in respect thereof when required.

SOUTH WALES..... At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TWENTY-SECOND REPORT OF THE DIRECTORS OF THE

COMMERCIAL BANK OF LONDON,

for the half-year ending 31st December, 1859.

At a Half-yearly General Meeting of the Shareholders, held at the Banking house, Lothbury, on Tuesday, the 17th January, 1860;

Present, the Directors and Forty-seven Proprietors;

The advertisement calling the meeting was read, and afterwards the following

REPORT.

The Directors have now to lay before the shareholders of the Bank the balance sheet for the half-year ending 31st December, 1859, exhibiting a net profit (including £1,014 10s 10d brought forward from last half-year) of £15,243 9s 2d, after paying all expenses of management, and making provision for bad and doubtful debts.

This enables the Directors to recommend a dividend for the half-year, at the rate of £7 per cent. per annum, payable on and after the 28th instant.

The dividend will absorb £10,500, and after allowing £3,459 4s 11d for rebate on current bills not yet due, a balance of £1,285 4s 3d will remain to be carried forward to the next half-yearly account.

Edward Stillingfleet Cayley, Esq., M.P., having resigned his seat in the direction,

James Clay, Esq., M.P.,

who is a duly qualified proprietor, offers himself as a candidate for the vacant seat, pursuant to notice.

The report and balance sheet having been read,

1. It was resolved, "That the report and balance sheet just read be approved, printed, and circulated amongst the proprietors."

The Chairman (Mark Hunter, Esq.), on the part of the Directors, declared a dividend on the paid-up capital of the Company, at the rate of £7 per cent. per annum, for the past half-year, free from income tax, payable on and after Saturday, the 28th instant.

2. Resolved, "That James Clay, Esq., M.P., be elected a Director of this Bank, in the room of Edward Stillingfleet Cayley, Esq., M.P., resigned."

3. Resolved, "That the thanks of this meeting be presented to the Chairman and Directors for their attention to the affairs of the Bank during the past year."

4. Resolved, "That the best thanks of the shareholders be given to the manager, Mr Cutbill."

MARK HUNTER, Chairman.

COMMERCIAL BANK OF LONDON.

—The Directors hereby give notice that a Dividend on the paid-up capital of the Company, at the rate of £7 per cent. per annum, for the half-year ending 31st Dec., 1859, free from income tax, will be payable at the banking house, in Lothbury, on and after Saturday, the the 28th inst.—By order of the Board,

A. R. CUTBILL, Manager.

Dated 17th Jan., 1860.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elisabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

LONDON AND COUNTY BANKING COMPANY.

Subscribed capital, £1,250,000. Paid-up capital, £500,000. Head office, 21 Lombard street.

DIRECTORS.

Philip Patton Blyth, Esq	Edward Huggins, Esq.
Thos. Tyringham Bernard, Esq., M.P.	William Champion Jones, Esq.
John Wm. Barmester, Esq.	James Laming, Esq.
William Cory, Esq.	John Henry Lance, Esq.
James A. Durham, Esq.	William Lee, Esq., M.P.
John Fleming, Esq.	William Nicol, Esq., M.P.

GENERAL MANAGER—William M'Kewan, Esq.

At the Half-yearly Meeting of Proprietors held on Thursday, the 2nd February, 1860, at the London Tavern, Bishopsgate street, the following Report, for the year ending 31st December, 1859, was read by the Secretary.

William Champion Jones, Esq., in the Chair.

REPORT.

The Directors have the pleasure of presenting to the shareholders their report for the half-year ending the 31st December, 1859.

It will be seen by the balance sheet, signed by the auditors, that the net profit of the Bank for the last half-year, including the sum of £6,291 14s 10d brought forward, and after deducting all expenses, income tax, and rebate, and making provision for bad and doubtful debts, amounts to £41,065 7s 11d, from which the Directors retain the sum of £5,000, to be added to the "Reserve fund," thereby increasing it to £110,000

The Directors recommend the payment of a dividend of 6 per cent. for the half-year, free of income tax, which will absorb £30,000, and, with 5 per cent. already paid, will make 11 per cent. for the year, leaving a balance of £6,065 7s 11d to be carried forward to profit and loss new account.

The Directors retiring by rotation are—Joseph Christopher Ewart, Esq., M.P., Philip Patton Blyth, Esq., and William Lee, Esq., M.P.

Mr Blyth and Mr Lee offer themselves for re-election; Mr Ewart is not a candidate, as he finds his other engagements prevent his discharging the duties of the office with satisfaction to himself; and as the Board will still consist of twelve members, no increase is recommended at present.

The dividend will be payable on and after the 13th instant.

BALANCE SHEET of the LONDON and COUNTY BANKING COMPANY, Dec. 31, 1859.

We, the undersigned, have examined the foregoing balance sheet, and have found the same to be correct.

(Signed) HENRY OVERTON, JOHN WRIGHT, FRED. HARRISON, } Auditors.

London and County Bank, 26th January, 1860.

The foregoing report having been read by the Secretary, the following resolutions were proposed, and unanimously adopted:—

1. That the report be received and adopted, and printed for the use of the shareholders.

2. That a dividend of 6 per cent. be declared upon the capital stock of the Company, for the half-year ending the 31st of December, 1859—clear of income tax—payable on and after Monday, the 13th of February instant, and that the balance of £6,065 7s 11d, then remaining, be carried to profit and loss new account.

3. That the thanks of this meeting be given to the Board of Directors for the able manner in which they have conducted the affairs of the Company.

4. That the thanks of the meeting be presented to the Auditors of the Company for the past year.

5. That Frederick Harrison, Henry Overton, and John Wright, Esqrs., be re-elected auditors for the current year, and that their joint remuneration be augmented from 60 guineas to £100 per annum.

6. That the thanks of this meeting be presented to William M'Kewan, Esq., the General Manager; W. J. Norfolk, Esq., the Chief Inspector; R. P. Nichols, Esq., the Secretary; and the other officers of the establishment, for the zeal and ability with which they have severally discharged their respective duties.

The election of two Directors having been proceeded with, the following gentlemen were unanimously re-elected:—

Philip Patton Blyth, Esq., and
William Lee, Esq.

(Signed) W. C. JONES, Chairman.

The Chairman having quitted the chair, it was resolved, and carried unanimously,—That the cordial thanks of this meeting be presented to William Champion Jones, Esq., for his able and courteous conduct in the chair.

(Signed) WILLIAM NICOL, Deputy-Chairman.

Extracted from the Minutes.

(Signed) R. P. NICHOLS, Secretary.

LONDON AND COUNTY BANKING COMPANY.

Notice is hereby given, that a Dividend on the Capital Stock of the Company, of 6ix per cent. for the half-year ending the 31st December, 1859, will be paid to the proprietors, either at the Chief Office, 21 Lombard street, or at any of the Company's Branch Banks, on and after MONDAY, the 13th inst.—By order of the Board,

W. M'KEWAN, General Manager.

21 Lombard street, Feb. 2, 1860.

THE BUDGET.

MR GLADSTONE'S Budget of 1860 is a very different one from that which he expected to propose at the present time when he brought forward his last great Budget in 1853. Almost all the material circumstances of Finance have changed since; the expenditure of the country, as Mr Gladstone is justly anxious to inform us, has augmented exceedingly, and we are now asked to give our assent to financial propositions which no one would have believed to be even possible seven years ago. The year which was to have been marked by the disappearance of the income tax, is to be signalised not only by its increase, but, also, by its seemingly permanent establishment in our financial system. The fund obtained by the falling in of the annuities, instead of being, as we should have expected it to be, the most conspicuous and important feature of the Chancellor of the Exchequer's statement, sinks nearly into insignificance, in comparison with other parts of its contents.

The proposal of Mr Gladstone is a somewhat complicated one, and it would be impossible for us, within the limits of an article, to comment on the whole of its minutiæ, even if the time which has elapsed since its delivery were sufficient to enable us adequately to judge of all of them; but we think the following sketch of the contemplated measure may be deemed sufficient, and may, perhaps, be useful.

Mr Gladstone states the account for the coming year of 1860-61, as follows:—The expenditure he estimates, in round numbers, at 70,100,000*l*, after deducting the expired two millions of Long Annuities. The yield of the various branches of the revenue, including the half-year of income tax at 5d remaining to be received, and supposing the tea and sugar duties to be continued at their minimum rate, exclusive of the war duty, he estimates as follows:—

	£
Customs	22,700,000
Excise	19,170,000
Stamps	8,000,000
Assessed taxes	3,250,000
Income tax	2,400,000
Post Office	3,400,000
Crown lands	280,000
Miscellaneous	1,500,000
Total	60,700,000

Thus showing an apparent deficit of 9,400,000*l*. This might seem enough to satisfy the courage of the boldest financier; but Mr Gladstone proposes for our consideration large reductions of taxation, which will very materially increase the difference between our expenditure and our income from its present sources. The reductions which Mr Gladstone wishes we should make are the following:—

	£
Reductions consequent on French Treaty	1,737,000
Reduction of other Customs duties	1,039,000
Reduction of Excise duties, principally paper duty	1,155,000
Total	3,931,000
Less compensating additional duties, anticipated increase in consumption, and diminution of expenditure	1,823,000
Total loss to revenue	2,108,000

The small additional duties here referred to are numerous and minute, and we have not space further at present to allude to them. We state the account in this form, as that which the Chancellor himself adopted. The total sum, therefore, which must be provided for by new taxes, independently of those just alluded to, supposing Mr Gladstone's Budget to be adopted, is 11,508,000*l*.

This sum must strike every one as a very large one, and any one but a bold Chancellor of the Exchequer would have shrunk at it. It includes, it may be briefly said, the cost of four great operations,—first, the increase of the Army and Navy Estimates to such an amount as the Government consider necessary for the adequate protection of the country; secondly, the cost of the Commercial Treaty with France, from which Mr Gladstone hopes so much; thirdly, the abolition of many remains of our protective system, as of the differential timber duties, which are to be reduced in all instances to the level of the duty on colonial timber; fourthly, the repeal of the paper duty, which is much complained of by many classes; and, besides these four extensive changes, there are many small ones which it is not necessary to touch upon, especially a very great reduction in the number of articles subject to Customs duties.

The first remark which must strike every one as they consider the subject is, that Mr Gladstone proposes to us to do a great deal at once. With regard to the Army and Navy Estimates, the country will not, we apprehend, make any objection to their large amount if only it should be found that—when we know their details—they have been framed judiciously, and that the money is really requisite for the substantial protection of the country; but it is very unfortunate that, just when we have to make such large military exertions, we should be required also, to make such large *pacific* exertions,—that we have to give up money just when we want money. Mr Gladstone tells us, indeed, that there is a natural connection between the two; he says that we ought to reduce indirect taxes, at the moment we are increasing our military expenditure, because the relief given to industry by the repeal of such taxes will be far more than sufficient to enable us in other ways to meet that expenditure. We should, he argues, take measures to augment our wealth at the moment when it is necessary to augment our outlay. He appeals to the well-known triumph of Sir Robert Peel's policy, and the increased prosperity which that policy has given to the country. But, it is to be remembered, that Sir Robert Peel began upon an unbroken soil; he had the unequalled good fortune to break asunder the trammels of a

protective system which cramped and impeded the *entire* industry of the country; he removed most of the burdens upon the principal branches of industry: what remains for his successors are comparatively minor details. We cannot, therefore, anticipate any such growth from reduction in our present revenue system as we experienced from the reductions of Sir Robert Peel. Some growth may be anticipated, undoubtedly, but not a large or an extraordinary one.

We may see the proof of this in the instance of the Commercial Treaty with France, of which Mr Gladstone has very concisely and clearly stated the outline.* "The French "Government," he tells us, "covenant to reduce the duty on "English coal and coke from 1st July, 1860; on bar and "pig iron, on steel (except on the kinds now prohibited) "from 1st October, 1860; on yarn goods, flax, and hemp, "including 'jute,' from the 1st July, 1861. The second "part of that Government's engagement is postponed "till 1st October, 1861, as the French Government "is under a pledge to the classes who supposed themselves interested in protection being maintained. But on "the 1st of October, 1861, the French Government engaged to reduce the duties and abolish prohibition in all "articles of British production mentioned in a list, in such a "way that no duty on any of these articles shall exceed 30 "per cent. These articles include what refers to provisions, "all the staple articles of British manufacture, yarn, flax, "hemp, hair, wool, silk, and cotton, manufactured skins, "leather, books, wood, iron, and other metals, and earthen "and glass ware. The French Government engage in respect "to ad valorem duties, to have the proper means, and to have "the value declared precisely in the same way now done "in the Custom House of England. I regard it as a signal "proof of the earnestness and liberality of the Government "of France, that it has adopted administrative regulations for ensuring the effectual execution of the Treaty. "Beyond that there is a further provision that the maximum "of 30 per cent. shall after a period not exceeding three "years be reduced to a maximum of 25 per cent. I may "also remind the committee that the rate of 30 per cent. to "which France is nominally about to pass from a system "of prohibition, was the rule nominally adopted by the British "Parliament when Mr Huskisson was Minister. But the rule "was adopted by England in such a way that the duty far "exceeded 30 per cent., whereas, so far as the terms of this "Treaty is concerned, France gives security that 30 per cent. "will be the maximum, and that it will be below that amount "on some manufactures. I now come to the English engagements. England, with one or two exceptions, engages "to abolish immediately and totally all duties on all manufactured goods of France. There will be a clear sacrifice "from the face of the British tariff of those articles. England engages to reduce the duty on French brandy, from "15s a gallon to the level of the duty on colonial spirits, to "8s 2d a gallon. England also engages to reduce the duties "on French wines from 5s 10d to 3s a gallon. England "also engages, further, to reduce the wine duty from 1st "April, 1861, in accordance with the quantity of spirit the "wine contains, on all bottled wines of whatever strength, "but in all wines having 26 degees and upwards of proof "spirit the duty will be 2s; on wine having less than 26, "but more than 15 degrees of spirit, 1s 5d a gallon; and on "wines with less than 15 degrees of spirit, 1s a gallon. "A power is reserved to increase our duties in case we shall "increase our excise duties on spirits. We also propose to "charge on French articles, subject to excise, a duty corresponding to the excise duty in England, with any extra "charges which the English producer may be put to in consequence of the regulations of the departments."

We cannot but think that it is evident from this explanation that the benefit to trade to be derived from the French Treaty will be slow, whilst its effect upon the revenue will be sure and rapid, and it cannot be expected to stimulate the entire industry of the country to a sensible extent for a considerable time. The repeal of every species of protective duty has our warm approval, and we should be exceedingly glad to see at the disposal of the Government the means of abolishing the duty on paper; but we own that we are startled at the prospect of all these considerable changes being made simultaneously, and at a time when we are obliged so largely to augment our expenditure.

We shall comprehend the difficulty to which we expose ourselves, of necessity, in doing so much so rapidly, by considering the nature of the taxes which Mr Gladstone proposes in order to meet the large deficiency in his accounts. First, he would renew the additional tea and sugar duties imposed for the purposes of the Russian war;—next, he proposes to put on an income tax of 10d in the pound, *three-quarters* of which are to be payable within the financial year; and he also intends to obtain a temporary relief from the credits now given in malt and hops. The account will therefore stand thus:—

	£
Extra tea and sugar credits	2,100,000
Malt and hop duties	1,400,000
Income tax	8,472,000
	11,972,000
Deducting deficit	11,508,000
Surplus	464,000

It is evident, however, that this surplus is obtained for the year under discussion by a process that cannot be again repeated. The sum obtained by the credits on malt and hops is avowedly the repayment of a loan made by the State; and the State has no more such loans to call in. The credit taken for increased consumption, diminished expenditure, and small taxes, is considerable. And, on the whole, few persons will doubt that if we make the changes which Mr Gladstone suggests to us, we shall, before long, be paying an income tax at a shilling in the pound.

We have already intimated our opinion that the changes which Mr Gladstone proposes are for the most part in themselves desirable; and it would not be seemly, after the interval of a very few hours, to pass a judgment on a scheme which must have occupied its author for many weeks. But we cannot forbear to say that our first impression is, that the plan is of too ambitious a character, attempts too much in too short a time, and is not so acceptable to us as a less daring proposal would have been.

THE PROPOSITIONS OF ENGLAND ON THE AFFAIRS OF ITALY.

We know that it has been made a matter of reproach against the present Government that it has renewed the attempt to settle the affairs of Italy by making propositions to the other Powers. It is said,—and this argument is calculated to bear with great effect on those who only see the external view of Italian politics,—that England had nothing to do but to protest against any forcible interference in the affairs of Italy, and so prolong the time during which the Italians might deal unmolested with their own affairs. This answer would be complete if it were true that the Italians are now at liberty to deal unmolested with their own affairs, or even that they could rely with certainty on French forbearance, were they to do so. The truth is, that Italy has not, as is generally supposed, at the present moment a free breathing space for political organisation. The States of Central Italy are in a condition of the most exciting political suspense. Sardinia on the one hand, Tuscany and Parma and Modena on the other, dare take no step forwards towards the aim which they are keeping before them. Sardinia dares not send troops into Central Italy,—Central Italy can get no nearer to identification with Sardinia,—until all parties are assured that such a step will not be followed by the public disavowal of France, and an intimation to Austria that the field will be left open for her interference if she choose to take steps with that view.

That England, in attempting to obtain from France and the other European Powers an express admission of the right of Italy to take the decision of things now into her own hands, has not been guilty of a work of meddling supererogation, no one who knows what is really going on in Italy will believe. Because no foreign intervention has yet taken place, or is even immediately anticipated, people are apt to infer that the interior of Italy is practically left at liberty to cement the union with Sardinia. The truth is, however, that Austria and the Grand Dukes are watching Italy from the Venetian side with an army of 150,000 men, eager for

* We think it worth remarking that the sketch of the Treaty published in the "Independance Belge," and which has been so much referred to, was exactly that given by the Parisian Correspondent of the ECONOMIST last week, and *might* have been copied by our Continental contemporary from thence.

some ostensible act of "intervention" on the part of Sardinia in Central Italy,—that a Neapolitan army, guided by Papal sympathies, is watching the Romagna for the same event,—while France, whose protection, if certain, would render both Austrian and Neapolitan armies empty threats, is on very uncomfortable terms with Sardinia, and apparently trying to wrest Savoy and Nice from her as the condition of any further assistance. What the present state of Central Italy now is, no one has described better than M. Peyrat, the eminent writer in the French *Presse*, who has only just returned from a tour in the disturbed States. Let him be our witness to the truth of the assertion, that it is no spirit of diplomatic meddling which has induced England to make her recent propositions to the other great European Powers. M. Peyrat thus describes his impressions of the public feeling in Italy:—"We return to Paris, with this deep conviction, that "Italy has never been, morally, in a more violent condition. "Everywhere we have met with the same patriotism, the "same devotion to the common cause, but everywhere also "we have met with the same uneasiness and anxiety. At "Turin, Parma, Modena, and Bologna, there is in the attitude of the populations, in the goings and comings of the "party leaders, and in the language of political men, an "ardour and an impatience with which it is impossible not "to be struck. In the life of nations, as well as in that "of individuals, nothing is more insupportable than uncertainty, and to put an end to it there are frequent examples "of a decisive move being made, no matter at what risks. "That is evidently what the Italians are about to do. The "long existence of a provisional state of affairs, the weakness of the Governments, the inaction of the troops, the "intrigues of Austria, are so many dissolving elements that "enervate the army and demoralise the people. The public "mind is anxious; enthusiasm on the wane; passions are "arising which have been long kept down. Old soldiers, "accustomed to the yoke of discipline, grow impatient while "daily expecting an enemy that never appears, and "gradually lose their moral courage. The volunteers, "who had taken up arms to fight, not to dawdle "away their lives in a barrack-room, have become a "regular difficulty for the Government, and may one "day become a formidable element of perturbation." In this state of the affairs of Italy, it becomes of the first importance that the Sardinian statesmen should know exactly what they may safely do without being abandoned by France and England. As Lord John Russell observed on Wednesday night, so soon as the Congress was known to be postponed *sine die* "Her Majesty's Government felt it to be "a very serious thing that the Italians, who had hitherto been "waiting in expectation that Italian affairs should be solved "by the Congress, should have no regular Government "and no apparent means of terminating the condition of "uncertainty in which they were placed." We cannot doubt that this suspended animation of political *will* in Italy, at a time when the political *life* there is so unusually vivid, has been and is an unnatural and dangerous state, the longer protraction of which might issue in new troubles. We think, therefore, that it is a wise step to use all the influence of the English Government to liberate Italy from this undefined and painful suspense. And we think also, that the propositions originated by the English Government were well adapted to this end.

1. It was proposed that both France and Austria should agree not to intervene again in the affairs of Italy without the consent of the five Great Powers. To this France at once assented, and Austria, while objecting that it is derogatory to her dignity to give any pledge on the subject, intimated that she has not the least intention at present of intervening in any Italian concerns beyond the Venetian frontier.

2. It was proposed that France should withdraw as soon as possible her armies from Rome and Lombardy: to which (under some *modified* form, we are told,) France has assented.

3. It was proposed to concede to Austria that there should be no European interference in the administration of the Government of Venetia: in case

4. It should be agreed that the King of Piedmont might assume power in Cental Italy whenever, and not sooner than, a new popular vote of the Central Italian States should reassert the wish of the populations to include their countries within the Sardinian dominions. Then, and not till then, it would, according to this resolution, be competent to the King of Sardinia to send his troops into Central Italy. On this last proposition France has asked time to deliberate,—intending, as it is supposed, to make the cession of Savoy and Nice, one or both, a condition of her acquiescence in the aggrandisement of Sardinia.

Now, the most obvious of hostile criticisms on these proposals of England would be, that they are—like Lord Malmesbury's fidgetty propositions last year—helpless propositions, carrying no weight and backed by no practical resolve. "The sympathies of England," says M. Peyrat, in the article on Italy to which we have before referred, "are not "doubtful. But obliged to keep up a force of 100,000 men in "India, she has no troops disposable for a war on the Continent, and she will not send a single regiment into Italy. "As regards the part she will take, it will be entirely limited "to a diplomatic co-operation. (Tout se bornera de sa part à "un concours diplomatique)." And this argument will be held by the Tory party to be so far valid as to prove, not perhaps that any new suggestion on the part of England must be ineffectual, but that it can only be effectual so far as it hampers us with risks or engagements which no gain of freedom for Italy could justify us in incurring.

In this view we cannot at all concur, and we will briefly state our reasons. First, England is not at all in the same position in which she stood last year. She is herself stronger,—and the case before her is far clearer. Italian constitutionalism and French aggrandisement seemed inextricably mingled last year in the same cause. Now they are assuming more and more clearly distinguished forms. Moreover, England has more hold upon France than she had last year,—has far more means of making her friendship important and her hostility annoying to France. The Emperor of the French has broken with the Pope,—he has roused the hornet's nest of Protectionists,—he has made all Germany jealous and vigilant,—he has no longer, it is supposed, as much influence with Russia as he had last year. He is comparatively isolated and thrown on the Liberal party in Europe. Let him offend that party also, and his position would become even dangerous. He cannot just now afford to ignore the strong convictions of England.

Next, it is not at all true that England, if her advice were slighted, and new complications in Italy arose, could do nothing material to assist the Constitutional party. She could, perhaps, spare no soldiers. But if Naples supported Austrian intervention in the North by an attack on the Romagna from the South, England could probably crush Naples, and so gain an influence in Italian affairs which France would not willingly see.

In short, our strength is greater than last year; our position is clearer, our influence is larger; and should our present Administration continue to guide our foreign affairs on the same firm and clear principles as heretofore, we have little doubt that we may modify the influence of France to the great advantage of Italy;—nay, probably soon succeed in that most difficult of feats, getting the French armies out of Italy which are now settled in it.

THE MISCONCEPTIONS IN FRANCE AS TO THE COMMERCIAL TREATY.

The excitement expressed in the French papers at the prospect of free, or rather freer trade with England, is widespread and profound. The producing interests, which are always more noisy than the general consumers, since to them everything seems to depend on price, while to consumers only very little in comparison depends on it,—are in a state of intense irritation with England, whom they regard as having instigated the French Government to the steps just taken. In France, free trade is viewed as something exclusively English,—an English theory, invented by Englishmen to suit the exceptional case of England. The *Moniteur Industriel*, the principal organ of the Protectionists in France, has long been lecturing Frenchmen on the selfishness of the English affection for free trade. It is a device of England's, we are told, specially suitable to her condition, for luring all other countries into an unequal competition with her. If England admits foreign articles free, it is because she has special advantages for competing with them and does not fear

their competition; and partly also in order, by the force of her example, to persuade other nations without the same advantages to admit her goods free, in which case she would easily supplant the native producers. This has been the language of the French Protectionist organ for a long time. Now it sees in the Commercial Treaty the realisation of all its worst fears. England *has* at last trepanned the Emperor into taking this fatal step. She has palmed off upon him, as of universal validity, a system of trade which is only adapted to English interests. And the consequence must be that France will be ruined. Into this cry a great many of the other French papers fall. England is to reduce a paltry wine duty and knock off a few trifling remnants of the protective system, and, in return, France is to open the floodgates and allow English manufactures, iron, and coal to overflow the whole country. The sacrifice on our part, it is said, is insignificant; on the side of France it is tremendous. The Emperor has been overreached and betrayed. We are going to take the bread out of the mouth of France as well as to have her wines. The people of England are supposed to be in a passion of joy at the achievement. Among the looms of Lancashire, in the mines of Northumberland, among the furnaces of the iron districts, all is gladness at the coming victory over France. The twenty or thirty per cent. duties which are still to remain on English goods imported into France will be no barriers strong enough to keep out the sweep of the advancing tide.

Such is the mode of thought into which the French newspapers are falling. It is easy to see how it has arisen. England is apparently giving to France a *quid pro quo*. But nearly all her protective duties have long ago been removed, and all that now remains is to sweep away a few trifling protective duties levied on French manufactures, and to lower the import duties on French brandy and wines. On the other hand, France has to begin at the beginning. The system is protective through and through. No step can be made in England which can for a moment parallel in importance those in France, simply because we have done it all already. The effect has been discounted,—the equivalent given in advance. Naturally to French eyes there seems to be a certain inequality in the present sacrifice.

On the other hand, we must inform our French contemporaries that in England the feeling is by no means what they suppose,—is almost the opposite to what they suppose. No doubt there is satisfaction among English producers at the prospect of a step in the direction of free trade in France; — no doubt manufacturers are pleased at the prospect of a wider market for such goods as England can best supply. But English producers are comparatively a small class, and by no means a depressed class. Their gain is to some extent, no doubt, the gain of the whole community; but still this is an indirect and gradual process, and English society at large will not greatly benefit by the reform in the French tariff. We shall, *as a nation*, feel more immediately, and probably benefit more by, the repeal of the few English protective duties on French manufactures, than by all the French reforms. While the French nation at large, together with a comparatively small class of English producers, will feel the benefit of the great French reforms,—the English nation, and the comparatively small class of French producers, will feel most the comparatively insignificant English reforms.

But, in one respect, it is proposed that the change in the English tariff which affects French producers favourably, shall affect the English nation at large anything but favourably,—and herein is the true reason why the treaty is anything but so warmly received as our French neighbours seem to think. The reduction of the French wine and brandy duties, and the corresponding reductions which this will involve with regard to Portuguese wines, &c., must deprive the English Government eventually of a million and a half of revenue. This is, of course, to be made up in a more burdensome tax—the income tax, which presses on less wealthy people. The wine tax is not felt: it falls only on those who can afford to pay it: it is the first tax which a man whose means should be suddenly contracted would cease to pay. But it is not easy to fill up its place by any tax half as little burdensome. And the English people, therefore, will necessarily make some real pecuniary sacrifice in order to buy the advantage which the relaxation in the French system offers to the mass of the French nation, and in some degree to English producers. The real *favour*, therefore, is granted, not by France to England, but by England to France. England has long ago *earned* (if such language be correct at all) the commercial concessions now offered by France, and even more. In order to make up even the appearance of an equivalent, she is obliged, therefore, to go beyond the free-trade system,—and to strike off certain unobjectionable revenue duties which are in no sense protective, simply to please the French producers. It is France who has made the better *bargain* in this matter. England can only boast that her change was earlier made, and that she has a fifteen years' start of her rival. At present she is asked to make what is really a sacrifice to encourage the first infant steps of that rival.

LORD PALMERSTON ON THE LAWS OF MARITIME WARFARE.

We print in another column "a memorial of the Liverpool "Shipowners' Association" to Lord John Russell respecting the present rules of maritime warfare, and we recommend it to the particular attention of our readers, because it states, in a practical and business-like way, the real grievances which are found by experience to result from those rules. Many of the mercantile bodies who have prepared petitions on this subject have committed a grave argumentative error. They have wished to give to the question a greater degree of general interest than really belongs to it; and, as usually happens in enlarging the range of their argument, they have increased the number of its difficulties. They have insisted on the philanthropic value of the exemption of property at sea from the perils of war; they have had no difficulty in showing that the adoption of the rules they suggest would make warfare more humane; they have shown that the adoption of these rules would, during the continuance of a war, diminish materially the suffering which it causes. But, in so arguing, they have not properly considered the view of this subject which English statesmen—especially our older statesmen, whose political memory goes back to the last great war—will inevitably take of the subject.

The recent answer of Lord Palmerston to the deputation from the Liverpool Chamber of Commerce puts this point in the very strongest light. He met the philanthropic argument of the gentlemen who addressed him by a military one. He said in substance,—We must, as Englishmen, advocate those rules of warfare which are most beneficial to England, which will increase *her* chances of winning and diminish *her* chances of losing in war: in former wars England has been victorious, because she was "mistress of the seas,"—because she captured whatever enemies' goods she could find on the sea,—because she ruined their commerce, and made prizes of their ships and prisoners of their crews. He observed: "That he would not flatter the deputation by professing to "agree with them. He considered that the very existence "of this country depended on its possessing the command "of the seas, and that it was necessary for that object to "retain the power of seizing the ships, and especially the "seamen navigating the ships of foreign Powers. War was "an enormous evil, but still it was sometimes necessary to "go to war in self-defence; and a naval Power like Eng-"land ought not to surrender any means of weakening her "enemies at sea. If we did not seize their seamen on board "their merchant vessels, we should have to fight them on "board their ships of war. He denied that private pro-"perty was spared in war on land any more than war at "sea. On the contrary, armies in an enemy's country took "whatever they wanted or desired without the slightest re-"gard to the rights of property, as we should find to our "cost if a hostile army should ever succeed in landing in "this country."

The principal argument proceeds upon a misapprehension. In the sense of this argument, England can never again be mistress of the seas. We hope that in any future war her Navy will distinguish itself as much as it did in former times; we hope and believe that it will prove itself stronger than any which will be opposed to it. But, however much this may be the case, it will not avail us as it formerly did; we have *agreed* not to use our power as we once did. We have agreed not to interfere with the exports and imports of the enemy's country unless they are carried on in the enemy's

own ships. We have allowed that all the commerce of our opponents shall be unaffected, and have only reserved the right of capturing their ships and making prisoners of their crews. It is quite idle to call England mistress of the seas, when the whole sea-going commerce of any of our enemies may go on without her touching it,—when she cannot deprive the consumers in the hostile territory of a single article, or exclude its producers from a single source of profit. We hope it may be very long before there is another European war, but we are sure that when there is, it will be found that the power of naval depredation which England now possesses will be of no real advantage to her.

It was not unnatural that a statesman of Lord Palmerston's standing should take the view which he did. Not only is it the traditional English view,—the view of our greatest and most eminent statesmen,—but likewise it is that which was the English side of an old controversy when Lord Palmerston entered public life. For a very long period it has been considered our national interest to extend the rights of belligerents at sea, because we were habitually the strongest Power at sea; and it has been the traditional policy of foreign nations to restrict the rights of naval belligerents with the almost avowed view of lessening the power of England and impairing the efficiency of her Navy. It was very natural that a statesman with the national spirit which has long characterised Lord Palmerston should have adopted the view most favourable to this country, and should be almost unwilling even to listen to arguments on the other side. It is most unfortunate that the discussion has been made so general,—that the topic has seemed to be an old one, when it is really quite a new one. The judgment of old statesmen is most likely to be at fault on a question which superficially resembles, but really differs, from one which they considered in their youth.

Lord Palmerston seems to attach much importance to our power of capturing foreign traders in case of war, and of so hampering our enemy's trade. But the effect of this must always, we think, be in practice trifling. The number of prizes actually taken will always bear but a minute proportion to the number of the ships afloat of either belligerent. If, as is assumed by Lord Palmerston, England has the undisputed and complete mastery at sea, *all* the ships of her opponent will not be so foolish as to venture from their own ports. The greater portion of them will be laid up there. The traders captured will only be those which are bold enough to venture to sea and which are so unfortunate as to be taken. The advantage of the present system in this respect is, therefore, we think, imaginary.

The great misfortune of the existing regulations respecting maritime warfare is, that the fear of war produces mischievous effects analogous to those of war itself. As soon as there is a possibility of a European war, orders will constantly be sent to distant ports to ship, *not* by English vessels, but by American vessels. Europe may not for many years experience a long period of uninterrupted quiet. Judging from present appearances, such is the most probable supposition. Critical conjunctures will, it would seem, occur with painful frequency, and at every one of such conjunctures English shipping will be at a disadvantage as compared with American. A general and lasting impression will be made on the minds of merchants that it is safe to ship in vessels with the United States flag, and *not* safe to ship in vessels with our flag; and, if such an impression should once take root, its consequences will be disastrous to us.

Lord Palmerston argues that property on land is not always protected, and, therefore, property at sea ought not to be so either. No one has ever contended that property afloat should be better protected than property on shore. It is only proposed that they should be put on the same footing. In both cases the exceptional circumstances of war may render exceptions necessary, but we need not, because of these exceptions, make a distinction between the two.

THE REAL DIFFICULTIES OF MANNING THE NAVY.

Sir Charles Napier is, we believe, to call attention on Thursday next, the 16th inst., to the Report of the Committee on the Manning of the Navy. We much fear that the true difficulties which stand in the way of procuring a rapid, ample, and efficient supply of seamen for the Royal Navy, are not adequately appreciated either by the authorities or by the public. Few persons appear to us thoroughly to understand how great they are, or whence they spring. Observers in general observe that our population is increasing, that our temper is loyal, that our tastes and habits as a people are decidedly sea-going; and they infer thence that the obstacles experienced in manning our ships of war are simply pecuniary or personal ones, and that as soon as the Admiralty make up their minds to treat sailors considerately enough and to pay them well enough, as many as can possibly be wanted will flock to our dockyards and embrace the Queen's service. Official men, old admirals, and the ordinary class of naval captains look at the vast expansion and the apparently boundless resources of the mercantile marine, and—judging by the past, and retaining far too much of the notions and plans of the former war—fancy that the superior cleanliness and comfort of a Queen's ship will make up to the seamen for the stricter discipline enforced; that honour and the prospect of prize-money will in the end outbalance the greater attractions in the way of higher wages and greater freedom offered by the merchant service; and that if they can only contrive once to entice men on board their ships, they will soon drill or thrash them into efficient sailors. They do not, indeed, avowedly look to actual impressment, as in the good old days, to furnish them with the raw material of crews, but they are vaguely yet firmly convinced that, by hook or by crook, by bribery or cajolery, this raw material can be procured in sufficient abundance whenever we set earnestly about it, and they trust to themselves, when once procured, to lick it into shape, and convert it in due time into the finished article. We, on the contrary, are disposed to think that both the general and the professional public are much misled as to the nature and extent of the resources on which they rely.

We desire to draw especial attention to an element in the question which has been almost, if not altogether overlooked. Since the great wars which occupied us in the first fifteen years of the century—during which time we had sometimes as many as 140,000 seamen and marines afloat—a signal change has come over our country. *The surplus, or apparently surplus, population* which then furnished the grand recruiting ground both for army and navy *has been absorbed*;—and a few figures and a few moments' consideration will explain *how* it has been absorbed. The population has increased, no doubt, but other things have increased in a more rapid ratio. The inhabitants of the United Kingdom were as follows, as near as can be ascertained:—

1811	18,000,000
1841	27,000,000
1860	30,000,000

It will be seen that whereas from the war period up to 1841, when great commercial distress prevailed and great commercial changes were about to be inaugurated, the population had increased rapidly. In the nineteen years that have elapsed since, that increase has been comparatively slow. This is attributable to two circumstances.

First.—The Irish famine of 1846, which was also shared to a great extent by Scotland. In the two countries this must have swept away not much less than one million and a half of people. The population of Ireland alone, which in 1841 was 8,200,000, and in 1846, by the ordinary rate of increase, must have reached 8,400,000, had fallen five years after (1851) to 6,660,000. *Secondly.*—In 1845 and 1846 an astounding tide of emigration began to flow from these islands, which rapidly drained away the whole of our surplus population. In the ten years previous to 1845, only 750,000 individuals had left these shores for colonies and foreign lands:—in the ten years subsequent, no less than 2,750,000 had left. In fact, what with famine and emigration the entire population of the United Kingdom had risen only from 28,500,000 in 1846 to 28,830,000 in 1851. In the thirteen years which have elapsed from 1846 to 1860, our numbers have increased by only a million and a half, or 116,000 a year; whereas from 1811 up to 1846 the average annual increase had been 300,000. The point to which however we wish to direct attention is, that between 1841 and 1860, or nearly twenty years, the population of these islands had suffered so many drains that its total increase was only one-ninth, or 11 per cent., or little more than *a half per cent.* per annum. Now

what has been the rate of increase of the various demands upon this population?

I. As to our foreign commerce, measured by our tonnage built, registered, and employed. Previous to 1841 the increase had been comparatively slow:—

	Tonnage inwards and outwards.	Aggregate Registered Tonnage.	Men employed.
815	5,400,000	2,680,000	177,000
1841	9,400,000	3,500,000	210,000
1858	22,300,000	5,530,000	287,000
1860 (say)	23,000,000	5,600,000	290,000

Thus between 1841 and 1860, while the population had increased only 11 per cent., the tonnage employed had increased 145 per cent.; the aggregate existing tonnage of the empire had increased 60 per cent., and the seamen engaged 26 per cent.

II. The manufactures of the country have increased also with the same astounding rapidity. This we learn, adequately perhaps, but still imperfectly, by the *official* values of British produce exported,—the official value, it will be remembered, being the measure of *quantity* only. The following are the figures:—

	£		£
1815	42,880,000	1858	271,650,000
1841	102,180,000	1860 (say)	280,000,000

This is an increase of 176 per cent. since 1841. It is true that during this period there has been a great economy of labour in the production of most manufactured articles, so that though three times as much is produced as was produced twenty years ago, three times as many persons are not employed in their production; but in all our great staple manufactures the machinery of 1841 was inferior to that of 1860 only in a moderate degree. Probably the economy of labour has not been on an average more than thirty per cent.

III. Since our former wars—for the most part, indeed, since 1830—an entirely new occupation has sprung up among us, and has absorbed a large portion of our population permanently, and a still larger portion temporarily—viz., *Railways*. In June 1858, by Capt. Douglas Galton's last published report, it appeared that 9,323 miles of railways were open in the United Kingdom. The number of navvies, engineers, and engineers' assistants, the number of iron-miners, iron-founders, machine-makers, &c., who must have been employed during the last 30 years—and a great proportion of whom are employed still—in constructing these vast undertakings and in providing their rolling stock, we have no means of ascertaining or conjecturing. But it must be enormous. Probably an average construction (such as we have have had since 1829) of 300 miles per annum could not be completed and laid down by fewer than 100,000 labourers of all descriptions. In addition, too, to all those engaged in *making* these railways, we learn that 109,000 persons are permanently employed in *working* them,—as clerks, engine-drivers, stokers, station-masters, plate-layers, watchmen, and others. This number is now 116,000.

It appears, then, that whereas our population has increased in the last nineteen years only *eleven* per cent., the demands upon the labour of that population in peaceful and industrial avocations have increased at rates varying from 26 to 176 per cent. We shall, therefore, have little difficulty in perceiving the extent to which those surplus and redundant numbers that were formerly available for the crimp and the recruiting sergeant, must have been diverted away and absorbed by the Irish famine, which swept away one million and a half; by a regular stream of emigration, which has sometimes amounted to 1,000 per diem; by the railways actually open or in process of construction; and by a development of manufactures and commerce which is without a parallel in the annals of the world. Nearly every one is now employed, or might be, if he wished, and the wages in every branch of labour have been steadily on the increase, and are rising still. To state the facts to which we desire to draw attention, in a still more striking and condensed form:—In the 26 years between 1815 and 1841, the population increased at the rate of 300,000 a year, while the demands on the labour of that population increased only at rates varying from 30 to 120 per cent.:—In the 19 last years, while the population has increased only at the rate of 160,000 (and in the last 13, only at the rate of 116,000) per annum, while the demand on the labour of that population has increased at rates varying from 60 to 176 per cent. In other words, the *rate of demand* has been largely increasing, while the *rate of supply* has been largely diminishing:—the former has *doubled*, while the latter has been *halved*. We need not wonder, therefore, that the idle and redundant population, which accumulated during the earlier period, has melted away and been absorbed during the latter.

BALLOT AS AN EXPERIMENT.

In the debate on Monday night, the friends of the Ballot had a much stronger case than on any previous occasion. Mr Duncombe's proposal was simply to try an experimental remedy on a disease pronounced almost incurable by regular practitioners. Whether we think it a quack remedy or not, we are not bound to have any very satisfactory evidence for the efficacy of a prescription which attracts notice only because the traditional remedies have failed. If a large political party have a very profound belief in the efficacy of secret voting, why not *try* their remedy in cases where there is an admitted need of some new course of treatment? If it does not bring about any material improvement, then the adherents of the Ballot-box may be silenced;—if it does, then apparently they will have won a fair victory. The proposal is certainly plausible, and deserves fair and fresh consideration. We will state briefly why it seems to us that the House was right in rejecting it.

In the first place, then, if the Ballot had succeeded in very much diminishing the amount of bribery and corruption in Wakefield and Gloucester,—which it is at least possible that for a time it might have done,—we should not have regarded this as enough. The Ballot party think of nothing but the great and terrible evil they want to diminish. We maintain that this evil, unspeakable as it is, may be diminished at too great a cost. We maintain that it is too great a price to pay even for impeding the practice of corruption, to dissociate in the mind of the nation the duty of a public assertion of political convictions from the exercise of electoral rights. We are profoundly convinced that the one ought not to exist without the other at all,—that a man who is not prepared to avow and defend his political action is not a proper subject for electoral rights at all. It is quite conceivable that the Ballot might succeed in increasing both the impediments to corruption and the impediments to the detection of corruption. But if it did,—the further question comes,—have you sacrificed nothing, for the sake of interposing this mechanical obstruction to corruption, which is part and parcel of the sense of political duty? Have you done nothing tending to lower the standard of political duty among the respectable classes, which more than compensates the hindrances you have put in the way of corrupting the disreputable classes? We hold strongly that it would be so:—that, however successful the Ballot might possibly prove as an experiment in diminishing bribery, it would be still more effective in lowering the general standard of public duty,—in sanctioning that injurious mode of thought which takes for granted that if men hold right convictions about public matters, it is no essential part of their duty to avow and defend them.

In the next place, one objection to trying the Ballot as a mere experiment would be, that the very machinery which you introduce throws difficulties in the way of knowing clearly how it acts. It darkens the light by the help of which the briber and bribee watch each other, no doubt,—but it equally darkens the light by which those who are intent on exposing them watch them both. If it act as its supporters hope, it would be like a dense fog which should at once deprive passengers, thieves, and policemen of the means of seeing each other. Such a fog would no doubt put difficulties in the way of effective stealing,—but even greater difficulties in the way of effective protection. And, as Lord Palmerston very justly observed, it would especially protect that worst phase of corruption, where the voter takes bribes from both parties. *Now*, such a man is known, marked, and exposed. *Then*, it would be impossible to tell what voters had thus flagrantly cheated both sides, although it might be possible to tell that some voters must have done so.

The introduction of the Ballot in detail, therefore, wants the necessary conditions of a fair experiment. There could be no possible measure of the declension of general public principle among the uncorrupt classes caused by the disseverance between electoral duties and the duty of public avowal of political faith. And even on the narrower

ground, the very machinery which interposed the obstructions to corrupt practices, would interpose equal obstructions in the way of ascertaining the real political result.

VARIATIONS IN THE RATE OF DISCOUNT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article of the 4th instant, on "The Bill-brokers and the Bank of England," it is remarked that, as the rate of discount, previously two and a half per cent., was now four per cent., a rise had been produced within three weeks of more than fifty per cent.

It has always appeared to me that this mode of applying the degree of change to the rate, or measuring power, instead of to the object measured, gives an exaggerated importance to that which, however worthy of consideration to the banker, is but a small matter to the merchant.

To illustrate what I mean, I would instance the case of measuring some object of length; whether we employ for that purpose a two-foot rule or whether we employ a four-foot rule the result is the same, the difference of fifty per cent. apparent in the means employed being of no effect.

In a purchase and sale of any commodity, the price or instrument of measuring does indeed vary, although inversely, in the the same degree as the object measured; that is, when the price is doubled the purchaser obtains half his quantity.

These illustrations are enough to signify that when a variation is expressed in the rate of discount, nothing more is indicated than a mode of computation by which the principal fund is to be diminished in a larger or smaller degree.

As the Bank of England never makes loans in the way of discount of longer duration than ninety-five days, it is probable that the average term does not generally exceed fifty days, or about one-seventh portion of a year.

Thus a principal sum of one thousand pounds is, in a discount transaction at two and a half per cent., reduced to 996*l* 11s 6d; whereas, at four per cent., it is reduced to 994*l* 10s 6d, the difference between the two results being certainly not fifty per cent., but only about two per mil, or one-fifth per cent.

So very slight a variation as the above in the deduction for discount is to the regular merchant a matter of almost no importance, considering that he is enabled thereby to obtain credit with the freedom or certainty he has been accustomed to, and is saved from the ruinous alternative of pledging his merchandise to money-lenders or of making forced sales.

All credit, strictly speaking, is but a mode of applying lent and borrowed capital; therefore all business, whatever may appear to the contrary, rests not upon credit but upon capital alone.

The mode in which capital is supplied or made to circulate in trade is capable of many distinctions, among others these:—First, it may be the merchant's own; secondly, it may be lent to him at yearly interest by persons whom he knows; or thirdly, it may be bill-raised capital, lent to him by persons that, in point of fact, he knows not, nor they him.

This last form of loan, although it exists in all countries, and, in this country, is a favourite creation of the statute law, is not a desirable incident of any person's trade unless only moderately availed of.

Merchants who depend on discounts for the undue extension of their business, since they often enjoy very easy terms in comparison with borrowers at yearly interest, must lay their account with occasional pressure, and probably with much higher rates hereafter than have yet been witnessed, although eight per cent. was reached in 1847 and ten per cent. in 1857.

The discount market is in its nature peculiarly sensitive and subject to change. As we shall have become further removed by lapse of time from the recollection and operation of the usury laws, I am disposed to think that this characteristic of natural sensitiveness or flexibility will be the more and more perceived; that frequent variations will cease to be regarded as an evil; and that a wide range of rate, so far from being of any disadvantage to the fair and honourable merchant, will, on the contrary, give him a firmer and more proper footing with relation to his less patient or more rash competitors.—I am, Sir, &c.,

London, Feb. 8, 1860. A MERCHANT.

MEMORIAL OF THE LIVERPOOL SHIPOWNERS.

TO THE RIGHT HONOURABLE LORD JOHN RUSSELL, HER MAJESTY'S PRINCIPAL SECRETARY OF STATE FOR FOREIGN AFFAIRS.

THE memorial of the Liverpool Shipowners' Association, adopted at a special general meeting, and signed by their Chairman pursuant to a resolution in that behalf,

Showeth,—That your memorialists are deeply interested in British shipping.

That the change in maritime international law, agreed to at the Congress held at Paris in 1856, by which the flag is now made to cover the cargo, has seriously altered the relative positions of British and neutral ships in time of war.

That, on various late occasions, ships the property of some of your memorialists have been placed at a disadvantage in competition with ships under American and Continental flags, because fear was felt at the time that England might become involved in war with a foreign Power.

That, though all fear of war may for the present have subsided, the losses so temporarily incurred by individual British shipowners have opened the eyes of your memorialists to the still more serious losses to which the British shipping interest generally may, in the now existing state of maritime international law, become exposed in the event of future war between England and any considerable Naval Power.

That even should such a war be brought to an end within a few years, and the owners of British ships sustain no other direct and immediate loss than may arise out of the depreciation in value and absence of earnings consequent on the inactivity of their ships, your memorialists would nevertheless submit:—

1. That the demand for the employment of ships under neutral flags would inevitably call into existence an enormous and otherwise unnecessary supply of neutral tonnage.

2. That the inability of neutral nations all at once to supply native crews for this extra tonnage, would lead to the gradual absorption into neutral ships of large masses of British seamen, thrown out of other employment by the contemporaneous inactivity of the British mercantile marine.

3. That the stream by which officers and other seamen are now continuously supplied to the British mercantile marine would suffer a sudden and lasting interruption, inasmuch as the merchant sailor apprentices being educated for their future profession on board the ships of your memorialists and of other British shipowners would for the most part seek other employments on shore, even were they not unfitted by youth and inexperience for useful employment in Her Majesty's Navy.

4. That peculiar hardships would thereby be inflicted on many of your memorialists, whose attention has been given to practical measures for improving the character and efficiency of British officers and sailors.

5. That, for all these reasons, your memorialists believe the injurious effects produced on the British mercantile marine by a naval war of only a few years' duration would in all probability be felt during many years after peace should be restored.

6. That your memorialists see no other real guard against the evils they are anticipating, than a declaration on the part of the Powers who were represented at the last Congress of Paris, to the effect that private property at sea shall be held inviolate in any future war.

Your memorialists accordingly pray that your Lordship will use the influence of Her Majesty's Government to obtain such a declaration either at a future Congress or otherwise.

All which your memorialists respectfully submit.

(Signed) JAMES SMITH, Chairman.

Agriculture.

A PRACTICAL LEASE.

WE print below the form of an agreement or lease—for, though in form an agreement, it is in legal effect a lease to a tenant being in possession—which has been furnished to us by Mr Edward Holland, M.P., as the form he has for many years adopted in letting his farms on leases. This lease has many recommendations; it is simple and concise in its language, and is singularly free from the burdensome provisions and regulations which are commonly found in agricultural leases. The only restrictions are that all hay, straw, and cattle food shall be consumed on the farm, and that during the last four years of the term the cropping shall be so regulated as to give the succeeding tenant a fair and equitable entry. There is no reservation of game; there is no restriction on assignment; and the tenant, knowing what buildings or repairs of build ings, or what draining, may be required to be done, may very well undertake to build, repair, and drain, on being allowed by the landlord rough timber, bricks and tiles, and draining tiles. There is, nothing to impede the most enterprising tenant from embarking capital either in the cultivation or the improvement of his farm, with the certainty of being able, so far as his contract with his landlord is concerned, to reap a satisfactory return for his outlays and exertions. The restriction on selling hay, straw, and cattle food is accompanied by the provisions that if any of such produce be sold, there must be previous notice given to the landlord, and the full value must be brought back in the form of manure and spread on the land. We doubt whether this restraint is necessary or desirable, unless it be confined to the last four years of the term. In certain localities it is plainly beneficial to the farmer and the farm to sell hay and straw; and there may be occasions and opportunities on all highly-cultivated farms when sales of hay or straw may be made by the tenant—unclogged with the condition of spending the whole produce of such sales in manure—beneficially to himself and without the least injury to the farm. If this restriction were confined to the last four years, we think

it would be a decided improvement in Mr Holland's very rational and business-like lease. The following is the agreement or lease:—

"Memorandum of Agreement made and entered into this day of one thousand eight hundred and Between A. B. (landlord) of the one part, and C. D. (tenant) of the other part.

The said A. B. agrees to let unto the said C. D., and he the said C. D. agrees to take for the term of years, commencing the day of the farm at as now held by him the said C. D., containing together a. r. p., at the yearly rent of *l*, payable half-yearly.

The said A. B. reserves all timber, mines, and minerals, with the right to take away the same at any time, paying for injury thereby done, as also for himself or agent to inspect the state of the buildings and condition of the land.

The buildings and gates shall be kept in repair by the said C. D., being allowed for that purpose the necessary timber in the rough, bricks and tiles.

The draining required shall be done by the said C. D., at a depth of not less than three feet, the tiles being provided by the landlord. No pasture land shall be broken up without the consent in writing of the said A. B. first obtained, and all rates shall be paid by the said C. D. (land tax and landlord's property tax excepted).

All hay, straw, and other food for cattle, grown upon the said farms, shall be consumed thereon, or if sold, the value thereof shall be expended in manures to be spread upon the said land. Notice shall be given to the landlord or his agent previous to selling such hay or other fodder, and vouchers shall be produced for the manure brought in its stead.

And, lastly, the land shall be kept and cultivated throughout the term of the tenancy under this agreement, *in a clean and good state and condition*, and so cropped that at the expiration thereof one-half of the arable land shall be fit and in good order to plant with wheat and barley after clover, beans manured, and fallow; one-fourth shall have been sown with clover in the spring upon land fallowed the previous year, and not more than one-fourth shall require to be fallowed in the year next succeeding the termination of the said tenancy.

In default thereof, or in case of breach or non-fulfilment of any of these covenants, the said C. D. shall pay to the said A. B. the damage thereby sustained by him, the amount of which shall be fixed by two indifferent persons, one to be chosen by each party, or their umpire; and, in like manner, the said C. D. shall be paid for any unexhausted improvements made by him upon the said land, as well as for acts of husbandry in the customary manner.

In witness whereof the said parties have hereunto set their hands the day and year first above written.

We would notice that this instrument should be under seal, so as to constitute a deed and give the tenant what is called a "legal" estate in the land. The practical reason for this is, that one of the benefits to be derived from rational and assignable leases is, that tenants holding them may, if needful, raise money upon the security of their leases. This at the commencement of the term may be of great importance to a tenant, as it might enable him to effect at once outlays of a somewhat permanent character, without interfering with his cultivation. The great object of a landlord should be to attract capital to his property; and that is best done by giving to his tenants every facility not only for the employment of their own capital, but also for raising, when necessary, a supplemental capital on the security of the lease and the improvements it has induced.

HIGH FARMING.

CAPITAL AND PROFITS.

If a society or an individual should offer a premium for an essay on the best mode of managing a ship, a factory, or any commercial undertaking, affording an example of good management combined with profit, such an offer would be deemed simply impertinent and absurd. Yet the Highland and Agricultural Society's list of premiums contained one for a report on "the best mode of managing a farm, affording an example of high farming combined with profit," and nobody seems to consider such a premium as anything extraordinary. The business of husbandry is supposed to require to be petted and coaxed, while trade and manufacturing industries can take care of themselves. The root of the difference, however, is that the owners of the land on which the business of husbandry is exercised imagine that, by such coaxing, farmers may be induced to expend more capital and give higher rents. This is mere delusion. Farming, like other employments, must depend upon advantages it offers for the application of capital and industry, and the greatest benefit any owner of land can confer on a farmer is to make a fair bargain with him, and interfere, either by petting or restriction, as little as possible. Let us, however, avail ourselves of the information as to the profits of high farming to be derived from the report of Mr A. Simpson, which obtained the premium. He gives the results of his own farming in 1856 and 1857 on the North-Eastern coast of Scotland. His farm consists of 313 acres, from which being deducted the sites of buildings, plantations, &c., there are 299 acres actually cultivated. We do not give his cropping details, but it may be mentioned that he has a greater variety of crops than are comprised in the common four or five-course shifts. All the land is under the plough, except five acres of meadow. Like most of the Scotch farmers, Mr Simpson suffered from wet harvests during both the years of which he has given an account; he, however, turned his sprouted grain to pretty good purpose by feeding an extra number of pigs. The following are epitomised statements of his expenditure and crops for the two years:—

Crops 1856 and 1857.
Farm.

Dr.	£	s	d	£	s	d
To ordinary expenditure for two years, as follows, viz.:—						
Rental, rates, &c.	1,018	9	0			
Labour, tradesmen, and charge	1,135	17	7			
Seeds	500	11	0			
Manures	413	16	9			
Depreciation in value of, and food bought for horses	112	7	0			
				3,181	1	4
To extraordinary expenditure, viz.:—						
Implements	65	17	0			
Improvements, and lime	130	2	10			
				195	19	10
Total expenditure				3,377	t	2
To balance for profit and interest				548	16	2
				3,925	17	4

Crops 1856 and 1857.
Contra.

Cr. By produce for two crops of—	£	s	d	£	s	d
Wheat	1,149	11	1			
Barley	491	13	6			
Oats (besides horse-corn)	471	9	1			
Total cereals				2,112	13	8
Beans, hay, &c.	57	19	3			
Turnips to sheep	133	6	10			
Potatoes	616	4	9			
Turnipseed	334	18	10			
Profit on live stock (deducting purchase for food)	670	14	0			
Total grass and green-crop land				1,813	3	8
Total returns				3,925	17	4

We have thus a net profit of 548*l* 16s 2d for the two years. Besides which, the farmer has had his house rent free, and the use of a horse and chaise for family as well as business purposes.

The mode in which this account is made up, is the simple and natural one adopted by the farmer for his own use. He takes the 1st of June as the time of balancing his account, when the corn of the last season is all thrashed and sold or in granary, and the winter stock of cattle, sheep, &c., has either been sold or valued, and turned over to summer grazing. Seed corn is debited to the past, and charged to the incoming year. Straw, manure, and farm-work performed are not charged at all, as only creating a complication and confusion of accounts, and they vary but little from one year to another. Neither are implements annually valued, but new purchases of implements are charged to the current year's account. Improvements are also charged year by year. Horses of course are valued, as are also other animals constituting the live stock of the farm. Rough corn consumed by horses and stock is not mentioned. It is obvious that a farm stock thus dealt with will be constantly improving in value. To produce these results, the following is the capital account given in Mr Simpson's report:—

Estimate of Farm Valuation, October, 1858.

	£	s	d
Live stock as at 1st June, 1858	897	10	0
Increased value thereof, from pasturage to date	100	0	0
Implements and mill machinery	400	0	0
120 acres corn crop, average per acre 8*l*	960	0	0
25 acres potatoes and winter beans, per acre 15*l*	375	0	0
6 acres mangold, per acre 10*l*	60	0	0
42 acres swede and yellow turnips, per acre 8*l*	336	0	0
12 acres turnip seed, contract	200	0	0
Hay stocks, 30 tons 3*l*	90	0	0
	3,418	10	

This is an "above-ground" valuation. An "under-ground" valuation of unexhausted manures and improvements might be entered upon; but it would be at the best but suppositive, and dependent on unknown conditions of prices. I shall therefore not add it to capital; though assuredly I would not part with it at less than one thousand pounds.

Assuming, therefore, that the "Capital Account" stands at the above sum of 3,418*l* 10s, the profit for two years appearing as 548*l* 16s 2d—i.e. 274*l* 8s 1d per annum—I have an annual return for superintendence, risk, and interest, of *eight per cent.*

This certainly is a very moderate return for the capital, risk, and attention such a business requires. We believe Mr Simpson is quite accurate when he says, "that by the close and jealous reserve generally observed by farmers in respect of their profits, a great deal of misapprehension is occasioned. I believe that landowners are more disposed to over-estimate than to under-estimate the profits of farming." So, again: "Tenant-farmers, from the want of keeping accounts, are apt to under-estimate their profits. Because the balance in the banker's is not increased from year to year, they are apt to conclude and to assert that 'farming is a losing business,' although in the meantime their personal and household expenses have been defrayed, and in most cases a progressive improvement has gone on in the value of their stock and condition of their occupancies."

Now all this appears to be a very fair and unexaggerated statement of a farming undertaking in which a considerable capital is employed in a spirited manner. That it shows that farmers can not afford to dispense with safe tenures or to suffer the trammels by which they are so frequently bound, can scarcely be denied.

Literature.

THE AUTOBIOGRAPHY OF A SEAMAN. By THOMAS, TENTH EARL OF DUNDONALD, G.C.B., Admiral of the Red, Rear-Admiral of the Fleet, &c., &c. Vol. I. Bentley. 1859.

[SECOND NOTICE.]

LORD DUNDONALD'S early life was a hard one. The eldest son of an impoverished family; his father cursed with a genius for invention, without the business talent to make his inventions pay; brought up in circumstances so straightened that money was not to be found for his education; intended by his father for the army, to which he had a rooted aversion, and prepared for it by a course of training which would have disgusted any youth of spirit with any profession, Lord Cochrane—for by that title he is best known to Englishmen, and indeed to the world—had gone through trials enough to render him irritable and headstrong before he obtained, at the age of seventeen, his darling wish of going to sea as a midshipman on board his uncle's frigate, the Hind, bound for a cruise off the coast of Norway. The only adventure met with on this first cruise was a ludicrous one. The ship's company had a pet parrot, a favourite of the captain, but detested by the first lieutenant for its trick of imitating exactly the boatswain's calls, so as often, by an inappropriate order, to throw the ship into confusion:—

One day a party of ladies paid us a visit on board, and several had been hoisted on deck by the usual means of a "whip" on the mainyard. The chair had descended for another whip; but scarcely had its fair freight been lifted out of the boat alongside, than the unlucky parrot piped "*Let go!*" The order being instantly obeyed, the unfortunate lady, instead of being comfortably seated on deck, as had been those who preceded her, was soused overhead in the sea.

On his return from this cruise, Captain Cochrane was appointed to a larger frigate, the Thetis; and his nephew busied himself, while she was fitting out, in learning the details of a seaman's work under the first lieutenant, who had risen from before the mast. Of course, the other midshipmen were enjoying themselves on shore. It was in this way that Lord Cochrane made himself the first-rate seaman that he was, and he appears to think the "youngsters" of this day very slow to follow the example. When the Thetis was fitted out she proceeded to the North American station; and on her way saw three vessels high and dry on an iceberg—one of them a hundred feet above the water, the melting of the ice having lightened the floe, and so elevated it. Before Lord Cochrane had been eighteen months at sea, he was made acting-lieutenant; and a few months afterwards, returning home, passed his examination and received regular promotion; and just four years after joining the Hind he was appointed lieutenant to the flagship on the North American station. A year afterwards he returned to England, and, after a few weeks spent on shore, accompanied Lord Keith to the Mediterranean, and was appointed lieutenant in the Barfleur, Lord Keith's ship. Here he speedily got into a scrape and a court-martial, out of which he came almost scatheless, with the mild admonition "to be more careful in future." He accompanied Lord Keith to the Queen Charlotte, when that admiral took command of the Mediterranean fleet. At Palermo he had "opportunities of personal conversation with Lord Nelson," whose advice he certainly followed in after life: "Never mind manœuvres, always go at them." The following remark explains Lord Cochrane's successes fully as much as Nelson's:—

Trafalgar itself is an instance of Nelson's peculiar dash. It has been remarked that Trafalgar was a rash action, and that had Nelson lost it and lived he would have been brought to a court-martial for the way in which that action was conducted. But such cavillers forget that from previous experience he had calculated both the nature and amount of resistance to be expected; such calculation forming as essential a part of his plan of attack as even his own means of making it. The result justified his expectations of victory, which were not only well-founded but certain.

Had Nelson been a Spanish commander he would not have attacked an English fleet with inferior numbers. But he knew the men he led and the enemies he met, and felt assured that scarcely any odds of numbers or guns could make up that difference. Trafalgar was rash, in the same sense that all our Indian victories have been rash. But Nelson felt as certain of success with inferior numbers as Clive or Lake, and for reasons very similar. Lord Cochrane's was a kindred spirit; and ere long he was to show himself as capable of daring impossibilities, and doing them, as Nelson himself.

In 1800 he was—at the age of twenty-four, having been less than seven years at sea—appointed to his first command, that of a wretched boat, 158 tons burden, armed with fourteen 4-pounders, and crowded with 90 men and officers, misnamed the Speedy. Her cabin was a box five feet high, surrounded by lockers, with a small table in the middle, whereas the captain was six; and when he wished to shave—like the giant of the child's story who had to climb a ladder for that purpose—Lord Cochrane was obliged to put his head through the skylight and make a toilet-table of the quarter-deck. With this craft, besides taking numerous merchant ships, he contrived to capture a French privateer of 6 guns, a Spanish privateer of 10 guns, another Genoese vessel of like armament, and one or two smaller armed vessels. Next we find him going to a fancy ball at Malta in the costume of a common seaman, involved thereanent in a duel with a French Royalist officer, and wounding his antagonist—of which he appears to be ashamed. Fight he must, having committed himself by his frolic; but surely life was never risked in a more foolish fashion. After capturing one or two more prizes, he next attacked, boarded, and took, a fine Spanish frigate, the Game, of 32 guns. The act seems almost an incredible feat of daring and skill, the forces being 50 men to 320, and a broadside of 28 lbs to one of 190 lbs. After a cruise, in which he made several more captures, he was ordered to convoy a packet boat to Gibraltar from Port Mahon. In doing this, he chose to run ashore and burn some Spanish vessels, and thus brought on himself three French line-of-battle ships, by which, after several hours' chase, his little craft was captured. It was not long before he obtained his release by exchange, and returned home. Before doing this, he endeavoured to obtain from Lord St Vincent promotion for the lieutenant of the Speedy, on account of the capture of the Game. The persevering way in which he demanded justice on this occasion, both for his officers and himself, ended in an enduring hostility between him and the Admiralty officials, which injured not only his own prospects, but those of all who served under him. The way in which Mr Parker was treated—the only one out of many personal complaints made in these memoirs which we shall extract—exhibits one of the worst instances of official villany that ever Commission revealed or Radical invented;—

Despairing of promotion, Lieutenant Parker had retired to a little farm near Kinsale, by the cultivation of which, in addition to his half-pay, he was realising an existence for his family. From my determined perseverance on his behalf, he was at length made commander and ordered to join the Rainbow sloop, represented to be stationed in the West Indies. Selling off everything, even to his household furniture, he proceeded to Barbadoes, and reported himself to Sir Alexander Cochrane; but, as the vessel could not be found, Sir Alexander furnished him with a passage to look for her at the Bermudas, where he supposed she might be fitting for sea. Not finding her there, Lieutenant Parker returned to Barbadoes, when *it became evident that no such vessel* was on the North American station!

On ascertaining this, poor Parker returned on England a ruined man. Lord Melville, who had succeeded as First Lord, expressed his surprise and regret that such a circumstance should have occurred, and promised the unhappy man that he should not only be amply compensated for the loss and expense attending his outfit and fruitless voyage to the West Indies, but that he should have another command on the first opportunity. This generous intention was however counteracted, for *he never received either the one or the other.*

Lieutenant Parker's loss, consequent on the sale of his property, the expense attendant on settling his family, together with his outfit and voyage, amounted to upwards of 1,000*l.* His prospects ruined, his domestic arrangements destroyed, and his pride wounded, his spirit and constitution gradually gave way, and at length, overwhelmed with sorrow, he sank into a premature grave, leaving a wife and four daughters to deplore the loss of their only protector.

I never could find out who had thus imposed on one of the most gallant officers in the Navy this infamous deception, concocted, doubtless, out of pure malevolence to myself. Be he whom he may, I am very sorry that it is not in my power to hold up his name to the execration of posterity. It is even at the present day the duty of the Admiralty to remedy the injury inflicted on his destitute family—for he had left four daughters unprovided for, who had no opportunity to escape from indigence.

Lord Cochrane's time on shore was spent in repairing, at Edinburgh, the deficiencies of his early education—a post-captain among University students. In 1803 he was sent in command of the Arab to cruise off the Orkneys,—"naval exile in a tub." On his return he was sent by Lord Melville, the successor of Lord St Vincent, to cruise off the Azores in the Pallas, a 32-gun frigate. With her he made several prizes; among them a bale of absolutions and indulgences returned from Mexico as *invendebles*. On his return, Lord Cochrane stood for Honiton on purity principles, was defeated; and then sent the bellman round to announce that all who had voted for him and refused the bribes of his opponent, might on applying to his agent receive ten guineas each! After this he joined the Channel fleet in the Pallas, and made several prizes. Having disposed of many of his crew in these, he found himself in face of three French corvettes, which could easily have taken the Pallas and her remaining crew of forty men. Seeing his danger, instead of running away, he boldly made all sail after the corvettes, and so terrified them that they all ran ashore and were wrecked. A few more facts of a similar kind, and then he returned to England, stood again for Honiton, and was elected; when, being plainly asked to pay those who had voted for him, he refused to give them a sixpence. His first exploit as a politician was a quarrel with Mr Croker, just appointed Secretary to the Admiralty. Before he had time to do more he was appointed to the Impérieuse. After a short cruise in her, he returned to England, and Parliament having been dissolved, in May, 1807, he was elected for Westminster. He soon made himself obnoxious to the authorities by his incessant attacks on the Admiralty, the pension list, and the whole system of official patronage, and was ordered to join the Mediterranean fleet. After making a few captures, his frigate was sent by Lord Collingwood to harass the French and Spanish coast as opportunity served,—and now commenced the most brilliant part of his career. Ship after ship was taken at sea or cut out in harbour before the Spanish revolution altered our relations with that country, and converted Lord Collingwood's orders into a direction "to render every possible assistance to the Spanish against the French." This was just the kind of service for a man so adventurous and

impatient of control as Lord Cochrane, and the work was admirably done. He landed parties, blew up roads and broke down bridges, destroyed French batteries, and was off before troops could be brought to the spot. Then, in conjunction with some Spanish militia, he took the fort of Mongat from the French. Then he sailed for the French coast, to retaliate on the enemy some of the mischief they were doing in Spain. In ten days he destroyed four signal stations, a custom house, and a battery,—the former service being the most important, as it interrupted the military communications, and greatly embarrassed the troops in Catalonia. Sometimes alone, sometimes in company with a chance consort, the Impérieuse pursued for weeks this harassing and vexatious system of warfare, to the intense irritation and alarm of the enemy, "causing a general suspension of trade, and harassing a body of troops employed in opposing him;" preventing also, according to Lord Collingwood's testimony, the advance of French troops upon the east coast of Spain. Next, Lord Cochrane undertook to conduct the defence of a Spanish fort—Trinidad—against a considerable French force, after it had been abandoned as untenable by another British officer, and when the Spanish commander was on the point of surrender. In his Lordship's view, the possession of Catalonia depended on his holding this apparently hopeless position till reinforcements should be sent. Here he received a severe wound in the face, and found himself opposed to a far superior enemy. He could not hold the town of Rosas, commanded by the fort; but the fort itself he did hold most gallantly. One night the fort was on the point of a surprise, when Lord Cochrane, sleeping uneasily, and being oppressed by a presentiment of peril, rose, went to the walls, and finding there a loaded mortar, fired it in the direction of the enemy's lines. A volley of musketry instantly replied. The French were on the point of storming the breach made by their artillery. After an obstinate fight, the storming party of 1,200 men was beaten off with tremendous loss. But for that purposeless discharge of the mortar, they would have stormed without resistance. Obliged at last to retire, he drew off the whole of his garrison, and gained the frigate. Owing to his skilful management, the total loss of the garrison was only three killed and seven wounded. The French lost fifty killed in the assault alone. A Spanish paper tells an anecdote of this siege very characteristic of Lord Cochrane. "When the Spanish flag, hoisted on the wall, fell into the ditch under a most dreadful fire from the enemy, his Lordship was the only person who, regardless of the shower of balls flying about him, descended into the ditch, returned with the flag, and happily succeeded in placing it where it was."

Of the last great feat recorded in this volume—the action of Basque Roads—we shall not attempt to give an account. The volume ought to be read: no abstract can do justice to exploits of so difficult and complicated a nature. Suffice it to say, that Lord Cochrane was sent to join the squadron under Lord Gambier's command, to execute a plan drawn up by himself for the destruction of the French fleet anchored in those Roads, and fortified by a boom of unrivalled strength. He himself steered the first bomb-vessel into the Roads, fired her, and blew up the boom. The fire-ships followed, but were grievously mismanaged, and did no harm. However, the object was accomplished. With two exceptions, all the enemy's ships were driven aground. Had they been attacked now, they must have been destroyed. But Lord Gambier was dilatory, and the opportunity was lost. Lord Cochrane, with his frigate, engaged three of the stranded line-of-battle ships, and took one of them; several others were destroyed. What Lord Cochrane thought of the conduct of the Admiral will appear from his own pages. What the Admiralty thought will seem pretty evident when we state, on his authority, that being resolved to support Lord Gambier, they offered Lord Cochrane three frigates, a regiment, and *carte blanche* to annoy the enemy in the Mediterranean, if he would refrain from making his complaint in the House of Commons. We forbear to enter into any discussion of the question at issue, leaving our readers to seek information and form their judgment for themselves.

Enough has been said to justify the assertion we made to begin with, that this book is better and more spirit-stirring than a romance. It will at least charm two classes of readers,—those who enjoy adventures, and those who delight in grumblings. For it is more full of interest than one of Marryatt's novels; more replete with denunciation of aristocratic selfishness and official abuses than a speech of Mr Bright; while it has the merit of being more true than the first, and more justifiable than the second.

THE VOYAGE OF THE FOX IN THE ARCTIC SEAS: A Narrative of the Discovery of the Fate of Sir John Franklin and his Companions. By Captain McCLINTOCK, R.N., LL.D. John Murray, Albemarle street.

IN the whole history of Arctic explorations no more daring feat is recorded than this voyage of the Fox in search of Sir John Franklin. One small vessel, of only 177 tons burden, built originally for a pleasure yacht, but now fitted up for no summer tour, carrying four-and-twenty hardy, resolute, and devoted men, set sail in July, 1857, for those icy and pitiless seas, that, after baffling the efforts of almost three centuries, had at last yielded up the secret of their communicating waters, but under the penalty of death to those who first wrested it from them; sealing their lips in eternal silence, and sweeping away almost every trace of their existence. Yet Franklin sailed with two ships, each larger and more powerful than the Fox; his companions were 129 men, equally brave and experienced; what likelihood, then, did there seem that McClintock with his slender equipment should succeed, where Franklin with superior force had failed at the moment of victory, at the time the prize so ardently sought for was within his grasp? What were the grounds on which Lady Franklin, and her chosen officers and crew, built confidently, and as the event shows justly, their hopes of a fortunate issue? They were chiefly these. In the first place, the greatly improved state of the charts since Franklin sailed. Numerous expeditions since 1848 had not, indeed, succeeded in finding traces of his ships beyond the place of their first winter quarters at Beechey Island, but had narrowed the limits within which those ships must be, if above ground, to a comparatively restricted space, so that, whatever the amount of difficulty and danger that must be faced and overcome, time and strength would not at least be wasted in false directions. Then, if the small size of the Fox made her seem perilously frail to battle with towering icebergs and clashing floes, yet even that had its advantage, in enabling her to slip through or avoid dangers no ship could meet and live; while her admirable build, her "taper bow," the quickness with which she answered to her rudder, and, above all, the thorough manner in which she was provided with all the latest resources of steam-power, gave her a decided advantage over either of Franklin's more powerful, but less manageable vessels. Again, though Franklin stood at the head of living Arctic navigators, yet on one point, and that of great importance,—the management of sledging parties and of overland travelling,—Captain McClintock excelled him, and probably every other leader. To this is chiefly owing the perfect success that has rewarded his efforts; and, by a want of skill or forethought in this respect, there is reason to fear, that the retreat of the unhappy crews of the Erebus and Terror was much impeded, if not rendered unavailing. If to these causes for sanguine expectation we add the tried courage of the seamen (all but seven of whom were inured to the life they were about to face), the high character and known capacity of their leader, the abundance and excellence of their provisions, and the careful adaptation of every, the minutest part, of their vessel to her future uses, we shall find sufficient justification for the hopeful confidence of all most nearly interested in this final, and at first sight hazardous, expedition.

The Fox and her heroic crew have returned in safety. Three deaths alone occurred in a voyage of over two years: one of these from scurvy, brought on by a wilful neglect of rules; the two others arising from apoplexy and from an accident, threatened to deprive the vessel of her great reliance. Her engines were left without either chief or working engineer; but, fortunately, she found in her captain a man equal to any emergency, and under his management "the engines were got to work well" on her homeward as on her outward journey. At this small expense of life this great end has been reached. The question of the fate of the Erebus and Terror and of their crews is finally set at rest. And more than this; it has been conclusively shown that to Franklin belongs the honour of being the first discoverer of the North-West Passage. Ninety miles of sea, ice-blocked and impassable during the one summer and two dreary winters spent in it by the blockaded ships, as they drifted slowly, at the rate of a mile a month, with the drifting pack,—but still a sea, alone lay between him and the navigable passage leading direct to Behring's Straits, whose existence he himself, and after him Richardson, Dease, and Simpson, and others, had previously ascertained. As if it put the seal to this, their claim to a first discovery, one of his companions fell down and died at the very meeting point of the known and unknown lands; while in his rear, strewn along the Western shore of King William's Island, never before trodden by the feet of white men, and seldom visited by the wandering Esquimaux, were relics of that last dreadful flight, whose terrors no one can even conceive who has not had some taste of similar suffering in the same dread and desolate wastes.

To Sir John Franklin, then, and to his brave companions, Gore, Crozier, Fitzjames, and their followers, belongs of right the fame of the discovery for which they gave their lives. This, at least, will not be denied them. Nor will it be grudgingly yielded to them by those who have devoted themselves to the same cause,—not by McClure, who has demonstrated a Northern route from sea to sea,—nor by McClintock, who has finished Franklin's work, and brought home the news that he did not live to bring—the certainty of a Southerly communication between Lancaster Sound and the already explored channel along the Northern coast of America. But is this all? Have her lost sons no further claim upon their country? Because they fell on their homeward road, have they forfeited their right to the reward they so dearly earned? The Government reward has been allotted to McClure, and deservedly so; but, now that it is known that others had a yet prior claim, shall it be disowned because it has been forestalled? England is no niggardly nation. The relations of that band of 129 gallant, ill-fated men, and, above all, the noble-minded woman who has spent her substance for their relief, have a claim upon her of which no other claim, however worthy, can deprive them. We trust it will be responded to as readily as their husbands,

sons, and brothers responded to her call, and perished in her service. It will remain even then a painful reflection that, by a temporary supineness on the part of her Government, she allowed a sacred duty to pass from her hands. Sir Roderick Murchison, the unfailing friend of Lady Franklin, says with some truth in his preface to McClintock's work:—"The highly-deserving men who have so zealously searched the Arctic seas and lands in this cause, must now rejoice that, after all their anxious toils. the merit of rescuing from the frozen North the record of the last days of Franklin has fallen to the share of his noble-minded widow." But England cannot rejoice that the burden of a duty she was herself called upon to undertake by every tie of honour, gratitude, and pity, should have been suffered to fall upon her; or that the exertions she has, since the days of Elizabeth, at all times freely made in the cause of science, and latterly still more actively made in the search for her lost sons, should be shadowed by any unworthy conclusion.

It is now sadly plain that if the repeated suggestions and entreaties of Dr King had been attended to, and a careful investigation of the Great Fish River had formed an essential part of the plans laid out for the first searching parties, the results would have been at least a quicker and more perfect clearing up of the mystery, and even perhaps the rescue of some survivors from a lingering death. This was simply an error in judgment. It is easy at all times to see after the event what ought to have been done; but Dr King showed a rare sagacity, and supported his views with so much show of reason, that they deserved a better fate than the dispatch of that small and ill-provided expedition under Mr Anderson, which yet brought back, in 1854, from Melville Island, in the mouth of the Great Fish River, the first decisive clue to the position of the ships, and the fate of those who had sailed in them.

All previous expeditions, and all subsequent ones till the arrival of McClintock, had stopped short of that desolate tract where our men "dropped down and died as they walked along." This region is now unveiled to us. We see it in its horrors; more desolate, more barren, than any other shore; beaten against by masses of ice brought down from the North-Western seas, and heaped up in places to the distance of half-a-mile inland, with the ruins of the surging floes. One ship was crushed and went down (so say the Esquimaux whom Captain McClintock fell in with on the opposite coast of King William's Island, and who had never before seen a living white man), the other came on shore—how long after its desertion by the crew no one can tell. Not till all had gone did that iron sea loosen its hold upon its victims; and then it was but to crush and to destroy them so utterly that no trace of either could be found after the most diligent search.

Of all the sad memorials that have repaid Lady Franklin's unwearied sacrifices, we know of none sadder than that of the boat found upon the Western shore of King William's Island, laden with clothes thickly heaped upon two human skeletons, and with its prow turned Northwards, towards the abandoned ships. "The weight of the boat alone was about 700 or 800 lbs only, but she was mounted upon a sledge of unusual weight and strength." "I have calculated the weight of this sledge to be 650 lbs, a heavy load for seven strong healthy men." Was it the fearful weight of such a load, so disproportioned to their strength, wasted as it must have been by three long winters and a scanty diet of salted meat,—for pemmican was not part of Franklin's stores, and his preserved meats were supplied by (to use Captain Osborn's words) "the miscreant Goldner,"—that turned this little company back again from the sole hope of life to which their companions were flying, to those deserted ships in which there was no hope, but which perhaps drew them back by the powerful attraction of home, the only home they had long known in these icy deserts, to die there without further struggle with their fate? Only one man was found in the ship that was driven ashore. How many shared the destruction of the other vessel, or perished in her before she was crushed by the ice, it is in vain to inquire. One thing we do know (thanks to the record left by Crozier and Fitzjames at the commencement of their flight), that Sir John Franklin died before these sufferings began. Almost a year before, on May 24th, 1847, he was "taken away from the evil to come." Like another Moses (writes Captain Osborn), "the discoverer of the North-West Passage had his Pisgah, and so long as his countrymen shall hold dear disinterested devotion and gallant perseverance in a good cause, so long shall they point to the career and fate of Admiral Sir John Franklin."

The general outline of this melancholy tale has been known for some time past, and the interest and sympathy it has awakened have only increased the desire for further particulars from authentic sources. In many of our weekly and monthly periodicals, vivid and graphic sketches by well-qualified pens have appeared; but none can rival McClintock's journal either in the minuteness of its information, or in the intensity of its interest. We are led on by it from day to day, and from week to week; we feel, and hope, and fear, and rejoice, with that brave crew. To us, as to them, the bagging of a "lot of game for the pot" is a relief and a cause for gratulation; and we feel with them the sharp disappointment of the loss when a fat seal perversely wriggles himself off the ice and sinks in deep water; for on the supply of fresh meat depends the strength and health of those with whom we seem for the time identified, and game grows more and more scarce as we near the Western seas. As yet though, these seas are far off. A full year must be passed before they can be reached. The prosperous opening that raised hopes of one winter's sufficing for the search are dashed to the ground; when early in September, 1857, the Fox is entangled in the "Middle Pack" of Baffin's Bay, and drifted helplessly back upon her course for the distance of 1,385 miles. Captain McClintock says, in speaking of the perilous time of her release:—

> After yesterday's experience I can understand how men's hair has turned grey in a few hours. Had self-reliance been my only support and hope, it is not impossible that I might have realised the fact. Under the circumstances I did my best to insure our safety, looked as stoical as possible, and inwardly trusted that God would favour our exertions. What a release our's has been, not only from eight months' imprisonment, but from the perils of that one day. Had our little vessel been destroyed after the ice had broke up, there remained no hope for us. But we have been brought safely through, and are truly grateful I hope, and believe.

Nothing daunted by this unpropitious beginning to her Northern researches, the Fox again turns her head Northward; and this time she passes the Middle Pack in safety, reaches Beechey Island, where the marble tablet sent out by Lady Franklin is now erected to the memory of him who had never yet been traced beyond this, his first resting place. Peel Sound, down which he is believed to have passed, is blocked by ice. Her course is turned North-east, round the island of North Somerset, and down its Eastern shore to Bellot's Straits,—straits only by conjecture, and on the truth of this conjecture now hangs all hope of reaching Victoria Straits and Peel Sound, in one of which Franklin's ships must in all likelihood have met their end. On the 21st of August, 1858, the straits are sailed through till the Western water is seen beyond a five-mile barrier of coast ice. "Of course this pack will speedily disappear." "It is no wonder that we should feel elated at such a glorious prospect":—a prospect not however to be realised; the Fox is not to be the first to sail from East to West, and return as she now buoyantly hoped by Behring's Straits. The ice barrier does not yield; winter sets in, the young ice forms round the ship, and all that can be done is to get her into safe harbourage, and complete by sledges in the following spring the work they had hoped to finish in their stout little vessel. This winter was more trying than the last in point of actual suffering, though cheered by the thought that they were on the ground of their actual work. Bellot's Straits were a funnel through which the winds drove incessantly; while clinging mists, dense and chill, from the open channel between Victoria Land and Prince of Wales' Island, first explored by Captain Young, and since called after McClintock, hung over them, adding much to their discomfort. But the spring came at length, and with it the active sledging work, hazardous and exhausting, but eagerly welcomed after the winter's gloomy confinement, and with it the complete reward of all they had undergone. The object they had most at heart was accomplished; and they, moreover, had added to our Arctic charts "800 geographical miles of new coast line," comprising the unknown shores of King William's Island, of North Somerset, and of Prince of Wales' Island. On the 20th of September in the same year, they entered the English Channel, after a rapid and safe, though stormy passage, to receive the hearty welcome, admiration, and thanks of their country and countrymen.

We have left ourselves no room to dwell upon many parts of this book well worthy of notice. We will only say in conclusion, that every page increases our estimation of the writer. Simple, concise, manly, straightforward, it relates deeds of which any man might be justly proud, with the tone of one registering from day to day ordinary daily duties. The justice Captain McClintock fails to do himself will be done for him by his readers, who recognise in his plain narrative a firm will, a tender heart, an intellect prompt, sagacious, and fertile in resources, and a courage high and undaunted, because resting upon that support whose need none more deeply feel than "they that go down to the sea in ships, that do business in great waters," that "see the works of the Lord, and his wonders in the deep."

The Art-Journal. February, 1860. Arthur Hall, Virtue, and Co.

The wood-cuts continue to be more numerous in this Journal than formerly, and, as the artistic department is much more efficiently conducted than the literary, this increase in the illustrations is an undeniable gain. There is, in fact, hardly any subject treated that is not accompanied by a few engravings, the illustrated chapters in the present number being no less than eight. The biographical paper on David Cox, and "Mediæval Manners: The Kitchen and the Dinner Table," are the most interesting of these. The steel engravings of pictures in the Royal Collection are perhaps not quite so attractive as usual. "The Liberation of the Slaves," by H. Le Jeune, is well composed and contains some striking figures, but there is a want of real feeling in the treatment, for which no successful execution can compensate. The scene, which is of the painter's imagining, is illustrative of the Hebrew custom founded upon the command: "If thou buy

an Hebrew servant, six years he shall serve: and in the seventh he shall go out free for nothing." Carlo Maratta's "Virgin and Child" is pleasing and graceful, but cannot claim any higher praise: it belongs to the declining years of the Roman school. Foley's statue of "Caractacus" is fine and vigorous, though a little strained in attitude: it is to decorate the Egyptian Hall in the Mansion House.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

PARIS, Thursday.

There is no denying the force and justice of some of the objections which are made in England to the commercial treaty with France; but the journalists, legislators, and merchants of England should bear in mind that if those objections be allowed to prevail, all hope of seeing the monstrous tariff system of France modified must be abandoned for many years to come. There are only two ways in which in France commercial reforms can be accomplished,—by law or by treaty; but the Prohibitionists and Protectionists are so strong in the Legislative Body and the Senate in which laws are made, and public opinion is so little in favour of commercial reform, that the Emperor, powerful though he be, could not hope to pass a law. On this point no manner of doubt can exist in the mind of any one who knows anything of the state of France. A treaty which the Emperor can constitutionally conclude and promulgate of his own authority is, therefore, the only means which the French Government has of effecting extensive tariff reforms; and a treaty with England was preferable to one with any other nation, inasmuch as it is against her industry that most of the abuses of the French tariff are specially directed. Such being the fact, I humbly submit that the treaty is entitled to a more favourable reception than it appears to have obtained in England. The choice literally is between a treaty and nothing; and surely the one concluded is preferable to nothing. The details of the convention should, too, not be harshly judged, owing to the fact that the French Government having really fearful opposition to contend against, and being, so to speak, but a novice in commercial reform, could not possibly make concessions on the same grand scale as the English Cabinet, and could not in particular carry its concessions into effect at so early a date. From what I say, it follows that the question which (in a French point of view at all events) the English Parliament and people will have to decide in dealing with this treaty is—Will they, yes or no, lend the hand to the French Government in accomplishing what is virtually an economic revolution? If they answer "yes," they will have the satisfaction of seeing prohibitions rooted out of the French tariffs, of seeing a moderate duty put on English coal and machinery, and of knowing that the way is made clear for effecting at no distant date other reforms which will be of immense advantage to England. If they say "no," they will consolidate the present iniquitous system of French tariffs for many years to come. They will also, in a purely political point of view, give a rebuff to the French Emperor which can hardly fail to endanger the Anglo-French altiance.

Addresses to the Emperor on the subject of the projected reforms continue to be sent. I do not think it necessary to occupy any of your space by examining, or even by recapitulating them; because, as I said in a previous letter, those that come from manufacturing towns are (with the exception of Calais, and perhaps also of Rheims) hostile to the reforms,—and those that come from seaports and the wine-producing districts are favourable to them;—because, also, these addresses of whichever side they be, will have no influence in the decision of the question to which they refer. I may, however, mention that the merchants and shipowners of Bordeaux have, in a meeting of 2,000 of their body, made a remarkable demonstration in favour of reforms, and have appointed a commission to assist in carrying them out.

One circumstance which explains the great antipathy of French manufacturers to the abolition of prohibitions deserves to be especially mentioned, though, perhaps, it will hardly be credited in England:—it is, that a great many of them actually still use the antiquated and inefficient machines which were in vogue so far back as 1815 and 1816! Another circumstance to be noted is, that the reason why the wealthier manufacturers who possess modern machinery are equally opposed to the projected reform is, that though by their machinery they produce goods much cheaper (30 per cent. at a moderate estimate) than the others, they sell at the same price as the others do. There are, in fact, in France two classes of manufacturers,—those who produce dearly and sell dearly, and those who produce cheaply and sell dearly. The former complain that they can only just make both ends meet, and the latter gain enormous wealth; and both, for evident reasons, stand up for prohibitions.

In the discussions to which the treaty will give rise in the Parliament and the press, the following statistics, taken from official tables, may be of interest.

The "official value" of importations from our country and colonies into France, for consumption in France (they figure in French returns under the title "Commerce Special"), were from—

	England.	British East Indies.	Mauritius and C. of Good Hope.	British Poss. in America.
	f*	f	f	f
1853	91,900,000	36,400,000	100,000	100,000
1854	132,900,000	53,300,000	500,000	100,000
1855	244,400,000	52,200,000	4,800,000	100,000
1856	251,200,000	66,900,000	4,500,000	200,000
1857	236,700,000	80,800,000	7,400,000	100,000
1858	215,600,000	79,300,000	7,700,000	400,000

The official value of exports from France of French productions ("Commerce Special") were to—

	England.	British East Indies.	Mauritius and C. of Good Hope.	British Poss. in America.
	f	f	f	f
1853	317,000,000	4,500,000	6,200,000	1,200,000
1854	279,500,000	4,800,000	5,100,000	1,600,000
1855	250,900,000	6,100,000	5,500,000	1,100,000
1856	278,900,000	6,100,000	6,300,000	2,000,000
1857	291,500,000	6,700,000	12,000,000	2,600,000
1858	371,400,000	7,000,000	12,800,000	1,300,000

* 25f equal to 1l.

The number of countries from which France made importations was 57; and the first in order of importance was England, the second the United States, the third Belgium, the fourth Sardinia, and the fifth British East Indies; the Zollverein, Turkey, Russia, Spain, were next in order; and Hanover was the last of all. The number of countries to which France made exports of her productions was 56; and the country which received most was England, the next the United States, the third Belgium, the fourth Algeria, the fifth the Zollverein; Spain, Switzerland, Sardinia, Turkey, Brazil, come next; and the last of all was Mecklenburg-chwerin.

The "*real value*" of the imports and exports, for French consumption or of French production, was in 1858 as follows:—

	Imports.	Exports.
	f	f
England	261,600,000	426,100,000
British East Indies.....	66,900,000	16,800,000
Mauritius, and Cape of Good Hope	11,500,000	8,800,000
English Possessions in America ...	400,000	1,700,000

The following was the value of the principal articles from England imported into France, for French consumption, in the year 1858:—

	Official Value.	Actual Value.
	f	f
Silk and floss silk	84,615,878	100,740,253
Wool.....	22,425,098	45,923,850

The Directors of the Bank of France, in their meeting held to-day, have not made any change in the rate of discount.

The shareholders of the Caisse Generale des Chemins de Fer, in their recent meeting, adopted a somewhat unexpected resolution, namely,—to reduce the capital from 50,000,000f to 20,000,000f. This proves not only that the "Caisse" is not doing well, but does not look very hopefully to the future.

Treaties of commerce and navigation between France and the Republic of Nicaragua, concluded on the 11th April, 1859, and between France and the Sandwich Islands, concluded the 29th October, 1857, have just been published.

A weekly journal, destined to defend sound economic principles, has just been started in this city, under the title *L'Avenir Commercial*. It is edited by M. T. N. Benard, a gentleman who has gained considerable distinction by his writings in favour of liberal commercial policy: and M. Michel Chevalier, M. Wolowski, M. Garnier, M. J. E. Horn, and other economists, are to figure among its contributors.

The following are the quotations of the Bourse:—

Subjoined is the weekly account of the markets:—

FLOUR.—At *Paris*, business has during the past week not been very active, but prices are firm. Yesterday, the ordinary marks of all sorts were 51f to 53f the sack of 159 kilogs (sack included), and the superior marks, 54f to 56f 50c. The four marks are also firm: yesterday, the sack was 55f 75c for the current month, and 56f 50c for March.

WHEAT.—At *Paris*, yesterday, little was done, but prices were firm. Quotations were from 29f 50c to 31f 50c the sack of 120 kilogs, according to quality. As regards the provincial markets, 42 present a rise of from 11c to 66c the hectolitre, 29 a fall of from 15c to 1f, and 51 remain without variation.

COTTON.—At *Havre*, in the week ending Friday, the sales were 11,626 bales, and the arrivals 17,045. The closing prices of the week were 99f the 50 kilogs for low New Orleans, and 106f for very ordinary ditto. The stock on the 1st of this month was 120,400 bales. Business has been rather rather active this week, and yesterday and the day before ow New Orleans was at 100f.

SUGAR.—The business at *Havre*, in the week ending Friday, was unimportant, only about 700 hogsheads French West India having been sold at from 58f to 60f the 50 kilogs. The arrivals in the course of the week were about 21,000 sacks and bales. This week very little business has been transacted: yesterday French West India was at 58f to 58f 75c duty paid. At *Bordeaux*, last week, the sales were only 800 bales Reunion at 60f 50c to 61f the 50 kilogs; 200 French West India at 57f to 58f; 1,600 Mauritius at 61f 50c. This week there has been a demand, and French West India has been quoted at 57f, Reunion at 60f. At *Nantes*, last week, the sole business transacted was the sale of Mauritius for England mentioned in last week's ECONOMIST. This week scarcely anything has been done; but quotations are: Reunion, 60f; Mauritius, 61f to 61f 25c; French West India, 59f; Havana, 36f.

COFFEE.—At *Havre*, in the week ending Friday, the sales were: 1,000 sacks Hayti, Port-au-Prince, 74f the 50 kilogs in bond; 800 ditto, expected, 73f 50c; 500 ditto, Cape, 76f; 25 sacks Gonaives, 77f 50c; 220 sacks Rio, 74f 50c; 485 sacks ditto, washed, 82f; a small lot of San Yago at prices kept secret; 30 sacks Manilla, 130f duty paid; 200 sacks Java, 135f; 33 bales Mocha, 152f; 130 sacks Ceylon triage, 128f; 1,328 sacks ditto, for delivery, 127f; and a small lot of Guadeloupe, 155f. In addition to the preceding, there were some sales of damaged of different sorts. The arrivals of the week were about 4,000 sacks. The stock in the bonding warehouses on the 1st of February was 2,707 tons. This week, the sales have not been considerable: Rio, washed, has been at 76f 50c in bond; ditto, not washed, 72f 75c to 73f; Hayti, 75f 50c; French West India, 157f 50c duty paid. At *Bordeaux*, last week, 657 sacks Demerara were sold at 142f 50c the 50 kilogs duty paid; 300 sacks Java at 137f 50c; 350 sacks Guayra at 1f 60c to 1f 70c the kilog in bond. The sales, this week, have been very insignificant. At *Nantes*, last week, nothing was done, and the same has been the case this week. At *Marseilles*, last week, 6,000 sacks Hayti were sold at 75f to 75f 50c the 50 kilogs in bond.

INDIGO.—At *Havre*, in the week ending Friday, about 100 cases Bengal were sold, part at prices 50c to 80c above the estimates, part at prices kept secret. There were no arrivals. The stock on the 1st Feb. was 1,308 cases. Nothing has been done this week. At *Bordeaux*, last week, 18 cases Bengal and 11 Kurpah were sold at prices not stated. This week, nothing done.

WOOL.—At *Havre*, in the week ending Friday, 42 bales La Plata-unwashed, went at 1f 30c to 1f 95c the kilog. in bond; 35 bales Peru, unwashed, 2f to 2f 25c. Some small lots of damaged Peru and of damaged La Plata sheep skins were also sold. Very little has been sold this week: Buenos Ayres at 2f 10c in bond.

TALLOW.—Nothing was done at *Havre* last week, and there were no arrivals. The stock on the 1st was only about 20 tons La Plata. There have been no transactions this week. At *Paris*, yesterday, the 100 kilogs were 123f 20c, a fall of 1f 50c on the preceding week's quotations. At *Marseilles*, last week, nothing was done, and prices were nominally at 125f the 100 kilogs for all sorts.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg. were at 90f the hectolitre; Montpellier at 128f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was at 135f.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Bombay, dated the 7th ult., says:—Dulness has continued to be the chief characteristic of our import market since the departure of last mail; and, looking to the falling off in demand for, and heavy anticipated arrivals of, cotton goods and twist, the prospects of importers cannot be considered otherwise than rather gloomy. Of exports, considerable shipments are going forward, but chiefly on native account, as English houses have done little in cotton, their largest operations lately being confined to linseed. Money in the bazaar is somewhat less easy than before, and native dealers are paying higher rates for accommodation. The Bank rates, on the other hand, remain the same, and the customers of that establishment have no difficulty in obtaining their discounts at 5 per cent. on Government paper, and 7 per cent. on short private drafts. Government securities continue to maintain the position advised in our last, and would probably have advanced much more but for large remittances arrived or expected from Calcutta. The fear of these being put upon the market in any quantity prevents speculative purchases, but ½ to ¾ per cent. more has nevertheless been paid for 5 and 5½ per Cent. paper. Our closing rates are 76½, 91⅛, and 96¾, for 4, 5, and 5½ per Cents. respectively. The demand for cotton piece goods is very dull.

The advices from Melbourne show that the banks which contracted for the railway loan have placed themselves in somewhat straitened circumstances. Considering the demand for railway works, coupled with the commercial pressure which prevailed, the immediate negotiation of 3,000,000*l* of bonds in the London market was looked forward to as the most tangible measure of relief. In reference to bullion, a letter says:—"A resolution has been carried in the Assembly for an address to Her Majesty, praying for the establishment of a branch of the Royal Mint in Victoria, with a requisition that the sovereigns coined at this Mint be accepted as a legal tender throughout the British Empire. The gold returns are as follows:—Received by escort 2,051,618 ounces, against 2,212,466 ounces in 1858. Shipped 2,128,524 ounces, against 2,312,095 ounces in 1858. The difference in value is 735,084*l*.

The following is an annual review of the lumber trade of Albany in 1859:—The lumber trade for the year 1859 was not distinguished by any very marked features. In the early part of the season prices ruled at an advance from those of 1858, under the apprehension of a scarcity, from the want of snow for stocking the mills during the previous winter. As the season advanced, however, large quantities from Canada West, Michigan, &c., which had been destined for Chicago and other Western ports, but which, on account of the limited demand, could not be sold there at any price, were sent to the East for a market. This soon brought down prices to lower figures than had been reached for several years, which induced a brisk demand in the latter part of the season, and reduced the heavy stock which had accumulated during the dull summer months to a reasonable amount, which will probably be exhausted before the opening of canal navigation. This extra amount, not calculated upon by the dealers, caused the receipts of the season, of sawed lumber, to exceed those of 1858 by about twenty-five million feet. The following table exhibits the receipts at Albany during the years named:—

	Boards and Scantling, ft.	Shingles. M.	Timber. C. ft.	Staves. lbs.
1857	180097629	71004	85104	153264629
1858	267466411	31823	119497	135011817
1859	291771762	48756	70331	114570503

The following table exhibits the valuation of the receipts during the years named:—

	Boards and Scantling. dols	Shingles. dols	Timber. dols	Staves. dols
1857	2881560	248515	15218	689691
1858	4412205	111383	20314	540047
1859	4881177	170646	11965	458282

The value of these receipts for 1859 is estimated at 5,528,070 dols. Besides the receipts by canal, several million feet were brought to market by railroad; but we have no means of accurately stating the quantity.

The state of the Austrian Empire and the degree of confidence in its stability cannot be more graphically described than by the following official statement, which shows the amount of the bullion in the Austrian Bank, of the bank notes in circulation, and of the discount of the notes, at the periods specified:—

	Bullion. £	Bank Notes. £	Discount.
Jan. 1, 1859 (before the New Year's speech)	10,500,000	38,700,000	1 per cent.
Feb. 1, 1859	10,500,000	38,700,000	2 per cent.
March 1, 1859	10,500,000	38,400,000	5 per cent.
April 1, 1859	10,500,000	38,200,000	5 per cent.
May 1, 1859 (declaration of war)	10,100,000	37,600,000	31 per cent.
June 1, 1859	9,000,000	42,900,000	42 per cent.
July 1, 1859	7,900,000	45,300,000	39 per cent.
August 1, 1859 (after Villafranca)	7,600,000	46,600,000	10 per cent.
Sept. 1, 1859	7,700,000	47,300,000	16 per cent.
Oct. 1, 1859	7,900,000	47,200,000	10 per cent.
Nov. 1, 1859	7,900,000	47,600,000	20 per cent
Dec. 1, 1859 (peace of Zurich)	7,900,000	47,400,000	24 per cent.
Jan. 1, 1860	8,000,000	46,600,000	23 per cent.
Jan. 26, 1860	8,000,000	46,600,000	35 per cent
Feb. 1, 1860	8,000,000	46,600,000	33 per cent

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 8th day of February, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,803,400	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,328,400
		Silver Bullion	...
	28,803,400		28,803,400

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,171,190
Rest	3,420,945	Other Securities	21,061,216
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	6 304,217	Notes	7,448,700
		Gold and Silver Coin	648,917
Other Deposits	14,301,686		
Seven Day and other Bills	750,175		
	39,330,023		39,330,023

Dated the 9th February, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	22,104,875	Securities	31,154,406
Public Deposits	6,304,217	Coin and Bullion	14,977,317
Private Deposits	14,301,686		
	42,710,778		46,131,723

The balance of Assets above Liabilities being 3,420,945*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£585,584
An INCREASE of Public Deposits of	994,458
A DECREASE of Other Deposits of	182,990
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	247,535
An INCREASE of Bullion of	34,815
An INCREASE of Rest of	96,466
An INCREASE of Reserve of	586,455

The large increase in the reserve is caused by the important addition to the Treasury deposits, which has been partly counterbalanced by a decrease in the private deposits, and by a further increase in the "other" securities. The increase under the latter head in the previous week was 1,273,924*l*. The drain of gold from the Bank has been arrested. The general result of these changes will be regarded with satisfaction.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,556,613	£ 19,661,376	£ 20 451,539	£ 21,412 098	£ 22,104,875
Public deposits	6,272,039	6,554,253	4,253,493	7,329,287	6,304,217
Other deposits	10,160,268	9 596,808	16,205,945	14,484,986	14,361,686
Government securities	14,296,554	11,524 457	9,702,317	10,696,147	10,171,190
Other securities	9,712,705	17,901,683	18,522,886	16,512,809	21,061,216
Reserve of notes & coin	11,428,880	5,581,041	11,446,352	13,317,520	8,097,617
Coin and bullion	16,850,255	9,979,246	16,574,647	19 461,005	14,977,317
Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	95⅞	93½	96½	95⅝	94½
Average price of wheat	38s 6d	56s 6d	46s 9d	40s 10d	43s 8d
Exchange on Paris (shrt)	25 45	25 17½ 22½	25 10 15	25 7½ 12½	25 7½ 12½
— Amsterdam ditto	12 1	11 14 14½	11 14	11 15¼ 55⅝	11 13 13¼
— Hamburg (3months)	13 12½	13 7	13 5½ 5¾	13 6	13 5 5¼

At the corresponding period of the year 1850, some sensation had been excited by the blockade of the Piræus by the British fleet, the British Minister having unsuccessfully urged certain claims upon the Government of Greece. There was a good deal of popular agitation in Paris. President Taylor had addressed a message to the Senate, recommending the admission of California into the United States. Money was extraordinarily abundant and cheap.

In 1857, the money market was acted upon by a severe drain of silver to the East. There had been some sharp observations in Parliament with reference to an alleged secret treaty between France and Austria relating to the affairs of Italy. The Euphrates Valley Railway project had been formally sanctioned by the Turkish Government.

In 1858, the Bank of England rate of discount had just been lowered from 3½ to 3 per cent. Gold was flowing in rapidly. News had been received of the capture of Canton by escalade by the English and French, as well as of the continued successes of Sir Colin Campbell in Oude. Bitter debates were going on in Parliament upon the Conspiracy Bill, and a painful impression had been produced by the tone of the French press.

In 1859, the semi-official journals of Paris were fulfilling their mission of familiarising the public mind with the idea of coming war. The Emperor's speech at the opening of the Legislative Assembly had failed to calm apprehension. The subscription list to Messrs Rothschild's Austrian loan of 6,000,000*l* had been closed, and the extent of the response had been very limited.

The amount of the "other" deposits, as compared with the "other" securities, showed in 1850, an excess of 447,563*l*; in 1857, a deficiency of 8,304,875*l*; in 1858, a deficiency of 2,316,941*l*; and in 1859, a deficiency of 2,027,823*l*. In 1860, the deficiency is as much as 6,759,530*l*.

The money market this week has been decidedly calmer, but an unsettled feeling continues to prevail. It is natural for holders of money to be desirous of lending at the highest rate possible, and as the prospect of a further advance in the rate of discount is not yet entirely obviated, many of them hold aloof, or lend only for short periods. Confidence in the stability of the general trade of the country is unimpaired, but the suddenness with which the recent drain of bullion sprang up has inspired an unusual degree of caution. The various moneyed establishments in the City continue to grant accommodation with only a moderate degree of freedom to their regular customers, but no business is done below 4¼ per cent. The operations of the bill-brokers are still severely hampered. Their efforts for some time past have been directed to the accumulation of a strong reserve, and they now refuse to do business except for their own *clientelle*, and many even of these are obliged to seek accommodation at the Bank or elsewhere. The principal bill-brokers ask 4½ per cent. upon the best paper having two or three months to run. Six months' bills are not taken below 5½ per cent., and are not at all in favour. Under these circumstances, the demand at the Bank of England, though not pressing, has been active throughout the week. The heaviest day was on Wednesday, some persons apprehending that a further advance in the *minimum* might possibly take place on the following day. Notwithstanding the unsettled state of the market, however, there was no immediate pressure of a character to warrant such a step. The return above given shows that the withdrawals of gold have shrunk into a small compass, whilst coin flows in from the provinces. The exchanges having somewhat improved, the demand for gold for the Continent has, for the present, slackened materially, and buyers have not been found except with some difficulty for the last parcels of gold imported. There is likewise an important decrease in the shipments of specie to the East. From these indications it would appear that the advance which has already taken place in the value of money here has gone far towards rectifying the adverse influences immediately in operation. It may thence be fairly inferred that a further movement in the same direction, if ultimately necessary, would be attended with a still more marked effect. These considerations are suggestive of confidence, as they serve to mark a limit to the prospective disturbance. The principal feature on the unfavourable side at present is the scantiness of the supplies of bullion coming forward. The advices last received from Australia possess great significance, since they fully confirm the view expressed on the arrival of the first telegrams that the pressure in commercial circles in Victoria—the great gold-distributing colony—will occasion the withholding of an important amount of the precious metal which, under other circumstances, would before now have reached this country. Australia likewise presses upon the home money market from another point of view, for she sends here, in lieu of gold (as we may consider it) 3,000,000*l* of 6 per Cent. Government Debentures. The negotiation of these is expected to be effected with little delay, as it is an object of importance to relieve the banks in the colony from the strain to which they are subjected in connection with the railway works now in progress, and which has occasioned a complaint that the banking facilities to trade are not adequate to the present colonial emergency. The straitening effect of the postponement of remittances

from Australia will, in all likelihood, be a good deal felt in England for some time to come. Hopes are entertained that intelligence will be received within a few days of a recovery in the New York exchange to a point at which the flow of gold to this country will be resumed.

There have been no withdrawals of bullion from the Bank since the date of the return given above.

There has not yet been any rise in the value of money on the Continent, in answer to the alteration here.

The imports of the precious metals continue limited. The total since the date of our last report is only about 170,000*l*.

The steamer Pera will take on the 12th inst. 223,070*l* in silver and 45,510*l* in gold for Bombay, and 5,200*l* in gold for Alexandria, making in all 273,780*l*.

The Continental exchanges have experienced a further slight improvement, and this afternoon showed firmness. The exchanges on St Petersburg and Vienna are lower.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—Since the date of our last circular (2nd instant), the Donald McKay has arrived from Melbourne, bringing 148,000*l*. Some little difficulty was experienced in placing this gold at former rates, as the demand for export is not so strong as last week: the withdrawals from the Bank have also to a great extent ceased, not more than 36,000*l*, having been taken during the week ending this day. The Avon has arrived from the Brazils with 5,735*l*, and this, together with 38,500*l* ex Tasmanian, from the West Indies, has been purchased for the continent. The Tyne has taken 6,813*l* in gold for the Brazils. The letters by the Australian mail enable us to complete our list of vessels now on the way with gold:—Asterope, with 20,000*l*, out 87 days; Commodore Perry, with 58,000*l*, out 84 days; Roxburgh Castle, with 89,000*l*, out 78 days; Cleadon, with 68,000*l*, out 70 days; Saldanha, with 64,000*l*, out 63 days; Essex, with 56,000*l*, out 62 days; and Indemnity, with 71,000*l*, out 54 days; making a total of 426,000*l*, of which 167,000*l* may be considered about due. The steamer has arrived at Southampton, bringing 14,000*l* from Australia overland.

Silver.—The downward tendency in the price of bar silver mentioned in our last has continued, the bars brought by the Tasmanian from the West Indies having been sold at 62½d per oz standard. We do not consider the market firm at this rate, and should quote the price as 62d to 62½d per oz standard. Some large amounts have been imported from the Continent, and for the present we do not look for much recovery in prices. The Tyne has taken 9,000*l* in bars to Brazil.

Mexican Dollars—The dollars, ex Tasmanian, have been sold at 62⅝d per oz, and the market is now bare. The Jura, from New York, brought about 10,000*l* in dollars, which have been sold. The price is likely to remain high, as we do not look for any arrivals of consequence for some little time. The Bolivian and Chilian dollars, ex Tasmanian, were sold at 60½d per oz.

Exchange, as looked for in our last, is a little weaker on Bombay and Calcutta at 60 days' sight for Bank drafts. Nearly all the business for the mail was done at 2s 0⅜d, but late yesterday a small amount was done by one of the Banks at 2s 0½d, and we are disposed to think that will be the quotation for next mail, unless silver should change materially.

India Government Loan Notes remain without much change, and the market, for the moment, is not a good one. We, however, beg to call the special attention of those interested in these securities to the official fact, that the total amount of notes advised from India to the India House, as enfaced up to December 31 last, does not much exceed 4,000,000*l*; then, allowing for coupon notes 1,000,000*l*, and 500,000*l* for notes of all kinds since January 1 to date, the total amount of rupee stock held in this country cannot exceed 5,500,000*l*. Of this sum it is judged that half is held by parties (trustees and others) who held it in India, whence it has been transferred, on the holders' accounts, to the London books, and consequently has in no way affected either the exchanges or bullion movements. The remaining amount, say, at the outside, 3,000,000*l*, is all that can have tended to disturb the ordinary course of the Indian exchanges, and as that amount has been in the course of remittance during the last twelve months, we think it is clear that India rupee stocks are accountable to a slight extent only, for the late drain of gold from the Bank and disturbance of the money market. We quote prices for 5 per Cents. 97½ to 98, and for 5½ per Cents. 103½ to 104.

Quotations for Bullion.—Gold—Bar gold, 77s 9½d per oz std; bar gold, fine, 78s per oz std; bar gold refinable, 78s 1d per oz std, last price; South American doubloons, 75s 3d to 75s 6d per oz; United States gold coin, 76s 3½d per oz, last price. Silver—Bar silver, 5s 2⅝d per oz std; bar silver, containing 5 grs gold, 5s 2⅞d per oz std; fine cake silver, 5s 6¾d to 5s 6⅞d per oz; Mexican dollars, 5s 2⅝d per oz, last price; Spanish dollars (Carolus), 5s per oz, last price; five-franc pieces, 5s 0½d to 5s 0⅝d per oz.

The Indian rupee paper is more offered and has fallen ½ per cent. The Five per Cent. was heavy this afternoon at 97 to ½, and the Five-and-a-Half per Cent. at 103 to ½.

The monthly return of the Bank of France, extending to yesterday (the 9th of February), shows, as we learn by telegraph, the following changes:—Coin and bullion,—increase, 230,000*l*; bills discounted,—decrease, 680,000*l*; notes in circulation,—decrease, 380,000*l*; Treasury deposits,—decrease, 1,160,000*l*; private deposits,—increase, 280,000*l*; advances on public securities,—decrease, 70,000*l*. The decrease in the discounts and increase in the bullion are the principal alterations. The former indicates no revival of trade.

The undermentioned railway dividends have been officially announced during the present week, viz.:—

London and South-Western Railway—at the rate of 5¼ per cent. per annum, against 5¼ for the corresponding six months of 1858.

Lancashire and Yorkshire Railway—at the rate of 5 per cent. per annum, against 4 for the corresponding period of 1858.

Great Western Railway—at the rate of 3½ per cent. per annum, against 2½ for the corresponding six months of 1858. The balance brought forward was 13,883*l*; that to be carried forward is about 25,800*l*.

Dublin and Belfast Junction Railway—at the rate of 4¼ per cent. per annum, against 4 in 1858.

North London Railway—at the rate of 5½ per cent. per annum, against 5 in 1858.

London and North-Western Railway—at the rate of 5¼ per cent. per annum, against 4¼ for the corresponding six months of 1858. The balance brought forward from the last account was 9,237*l*; that to be carried forward is 10,870*l*.

As may be gathered from our notice of the course of the railway share market, these rates of dividend have been received with great satisfaction, the only exception to this feeling being in the instance of the London and South-Western, and, perhaps, the Lancashire and Yorkshire. The magnitude of the Great Western Company's dividend has proved an agreeable surprise to the shareholders.

The new Canadian 5 per Cent. loan is rather dull. The scrip was quoted this afternoon 1⅞ to 2⅛ prem.

The prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 1⅞ to 2½ prem.; Universal Marine Insurance, ½ to ⅝ prem.; San Paulo (Brazilian) Railway, ¼ to ⅛ dis.; Bank of Turkey, ⅛ dis. to ⅛ prem.; and City of London Brewery Preference shares, ¼ to ½ prem.

At Paris, to-day (Friday), the closing quotations of the 3 per Cent. Rentes were as follows, viz., for money, 67.85; and for account, 67.80. These prices are a trifle above those of yesterday, and almost precisely the same as those of Friday last. The Bourse remains dull in character. The question of the annexation of Savoy and Nice attracts a good deal of attention.

The course of the English funds this week has been much the same as that of last week: there has been a fall, followed by a rally. Consols, which closed on Friday last at 94⅞ for the 8th of March, fell yesterday morning to 94⅛ to ¼, and have recovered to-day to 94½ to ⅝. For money the last price this afternoon was 94⅝ to ½. The fall of ¼ per cent. which has been established is attributable to the supply of stock lately thrown upon the market by bankers. The operations of the public, however, appear to predominate largely upon the side of purchasers. Speculators have waited with impatience for the Budget. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks has been unusually buoyant, and has resisted, in a marked manner, the occasional heaviness of the funds. The declaration of very satisfactory rates of dividend has effectually deterred sales on the part of *bonâ fide* holders. To-day's closing quotations, compared with those of last Friday, exhibit a rise of 2 per cent. in Great Western stock, 1½ per cent. in Eastern Counties and South-Eastern, ¾ per cent. in Great Northern and London and North-Western, ½ per cent. in Caledonian and Midland, and ¼ per cent. in North British and Berwick. On the other hand, Lancashire and Yorkshire stock has declined ¾ per cent., and London and South-Western ¼ per cent. This afternoon the market generally showed undiminished firmness. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

Railways.	Closing prices last Friday.	Closing prices this day.
Bristol and Exeter	104 5	104 6
Caledonian	93¼ ¾	93⅝ 4½

The Commercial Times.

REDUCTION OF POSTAGE ON LETTERS FOR VENETIA.—Letters for Venetia, sent *via* Belgium, will in future be chargeable with the same rates of postage as letters for Austria, viz., sixpence per half-ounce, *provided such postage be paid in advance.* Letters upon which the postage is not prepaid, will be charged with a rate of eightpence per half-ounce letter. The registration fee upon registered letters addressed to Venetia will also be reduced from 9d to 6d each.

NEWSPAPERS FOR AUSTRALIA AND NEW ZEALAND.—A desire having been expressed on behalf of the Australian colonies that the Governments of those colonies should pay the cost of transit through Egypt of newspapers sent to Australia *via* Southampton and Suez, instead of such newspapers being subjected to a charge for this transit, the additional penny levied on these newspapers since the beginning of the present year will cease. The postage of newspapers for Australia and New Zealand, sent *via* Southampton and Suez, will henceforth, therefore, as formerly, be one penny each ; but the postage of newspapers by this route to India, Ceylon, Mauritius, China, and all other places eastward of Suez, will continue as at present, viz. :—Upon a newspaper addressed to the East Indies, 2d when not exceeding four ounces in weight ; 3d when above four ounces, and not exceeding eight ounces in weight ; one penny being added for every additional four ounces or fraction of four ounces. Upon newspapers addressed to any of the other countries or places referred to, 2d for each newspaper of whatever weight.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The few samples of English wheat on offer at Mark lane, to-day, were taken off readily, at fully Monday's prices, and there was a better demand for foreign qualities, at previous rates. The barley trade was somewhat active, and the value of oats, beans, and peas was freely supported. No change took place in the value of flour. The imports from abroad have been confined to 620 quarters of wheat; 2,490 barley; 6,850 oats; 300 sacks and 1,500 barrels of flour.

At Liverpool, this morning, most kinds of produce commanded full quotations.

The transactions of the week in the Liverpool cotton market have amounted to 78,000 bales, of which spinners have taken 52,000 bales, speculators 17,000, and exporters 9,000 bales. The quotations remain pretty nearly the same as on Friday last. The demand has been general throughout the week, but the advance in the value of money has curtailed the business, which would otherwise have been on a more extensive scale, and has brought out a larger choice of cotton, which is offered freely. To-day the market closes quiet but steady. Sales 7,000 bales. In the London market a large business has been done this week, the sales amounting to 5,300 bales at prices ruling rather above those of last week.

Advices from Bombay are to the effect that the cotton trade was heavy, on easier terms, owing to the favourable accounts at hand in reference to the crop. Letters from Alexandria to the 26th ult. state that about 6,000 bales had found buyers, at very full prices. In the previous fortnight, 5,724 bales had been shipped to England

The public sales of tea have gone off somewhat slowly; nevertheless, no quotable change has taken place in prices. In the private market, owing to the arrival of telegrams from China stating that only a limited business was passing for England, there has been rather more firmness, and, in some instances, although the imports last month into London were over 10,000,000 lbs, against 2,425,000 lbs in the corresponding period in 1859, the quotations have had an upward tendency. The supply now on passage to this country is 16,755,600 lbs, against 13,438,000 lbs last year at this time.

IMPORT of TEA in London, from January 1 to 31, 1860, and the STOCK on hand on Jan. 31, 1860, compared with the corresponding date in 1859.

Owing to the uncertainty which has prevailed in reference to the contents of the Chancellor's Budget, the operations in the sugar market have been unusually limited. However, importers have shown no desire to press sales, and the quotations have been maintained. Refined goods have somewhat advanced in price.

"The sugar market has been active throughout the month," says a report from the Mauritius, dated the 7th of January, "and large shipments to Europe have been made at an advance of 15 cents per 100 lbs upon ordinary qualities, and 20 to 30 cents upon vacuums or crystallised. Nearly three-fourths of the crop have now gone forward, amounting to 75,900 tons, which, compared with last year's shipments, shows an excess of 5,300 tons. The demand for Australia has very much abated, and purchases of suitable descriptions could be made at a considerable reduction upon the rates paid at the beginning of the season."

For cocoa, the inquiry has ruled healthy, at full quotations. Dealers, however, purchase cautiously.

We have to report a very quiet market for all descriptions of rice, at late currencies. The stock continues to decline.

Saltpetre has somewhat fallen in value, and rum has met also w inquiry. Brandy, however, has further advanced fully 2d per gallon.

"We have to report a quiet market in silk," observe Messrs Durant and Co., "home consumers decidedly restricting their purchases in consequence of their inability to make progress in the sale of manufactured goods, and foreigners still holding off as determinedly as ever, notwithstanding the prospect of their being able to send in goods to this country free of duty. In China silk the arrivals have been tolerably large, but the idea that the total export will prove scarcely equal to European requirements makes importers very firm. Chinese thrown silk remains heavy and depressed, a forced sale or two at the end of last month having failed to produce any increased demand. Bengal silk shares the general quiet, but maintains its improved position in the scale of consumption. Italian silk remains a dead letter. In Brutian and Persian silk nothing of importance. The periodical public sales are fixed to commence on the 15th instant."

Messrs Churchill and Sim have issued the annexed particulars of the stock of timber in London:—

COMPARATIVE STOCK of TIMBER at the PUBLIC DOCKS on 1st February.

	1860.	1859.	1858.
Foreign deals .....piecea	1,569,000	1,546,000	1,484,000
— Battens.....	902,000	581,000	747,000
— Fir timber .....loads	63,600	38,800	65,600
Colonial pine deals and battens. pieces	756,000	1,096,000	1,275,000
— Spruce ditto	1,068,000	834,000	1,090,000
— Pine timber.....loads	11,600	12,600	15,300
United States pitch pine timber	3,100	2,600	4,600
East Indian teake	4,800	14,700	5,900

The present stock is less than that taken on the 1st January by 164,000 foreign deals, 72,000 foreign battens and ends, 7,400 loads fir timber, and 190,000 colonial pine and spruce deals and battens.

The public sales of indigo commenced on Tuesday. The quantity declared for sale was 5,914 chests in the A, and 1,607 in the B catalogue; total, 7,521 chests, of which 241 chests were not printed or withdrawn, leaving the quantity to be brought forward 7,280 chests, consisting of 2,692 chests Bengal, Tirhoot, &c., 444 Oude, 1,494 Kurpah, 1,062 Madras, 66 Figa, &c., and 1,522 sundries in B catalogue. The sale began without animation, and with very irregular prices; as it proceeded, the demand for good consuming and middling shipping qualities, from 6s to 7s 3d, became animated, and has continued so to the end; the prices of these sorts may be quoted 4d to 8d advance on the average rates of the October sale. Owing to the total absence of Russian orders, fine Bengal has been neglected and chiefly kept by proprietors. Ordinary and low sorts, of which there was a very large proportion in the sale, have met with a very limited demand, and prices have been very uneven, ranging from October rates to 3d advance. Kurpahs of good colour, and free from bad mixtures, have been, as usual, in good demand throughout, at an advance of 3d to 6d per lb; but low earthy sorts have been neglected, and mostly bought in. Dry leaf Madras has been in limited demand; owing, however, to the withdrawal of several large parcels, prices in the latter part of the sale slightly improved, and may be quoted now from par to 3d advance. Of the quantity which has passed the sale (5,914 chests), 1,936 have been withdrawn, 1,510 bought in, leaving 2,468 sold.

We have no further change to notice in the value of wool; but the demand for all kinds is still very inactive. Letters from Melbourne state that increased quantities were coming forward. The next series of public sales of colonial and other fine wools will commence on Thursday, 1st March. The quantities of colonial wool already arrived are as follows:—Sydney, 3,208 bales; Victoria, 7,254; Tasmania, 55; Adelaide, 1,704; Swan River, 42; New Zealand, 1,287; Cape, 10,394;—total, 23,944 bales. The low will sales will commence at the close of the series.

Messrs Powell and Co. thus report the state of the leather trade:—

The activity in the leather market with which the year opened has continued, with very little abatement, throughout the whole of January. The supplies, owing no doubt in some degree to the bad drying weather, have been short, and consequently the stocks of almost all articles are reduced to a very low point. Prices, in all cases, have been firm, and on some articles higher rates have been realised, but the advance generally is not important. During the last fortnight the transactions have been less extensive than in the earlier part of the month; but there has been nothing in the character of the recent demand to lead to the anticipation of any reaction; on the contrary, the consumption being still maintained to a full extent, and the addition of some fresh Government contracts, with the small stocks on hand, lead us to expect increasing firmness in the prices of leather. In raw goods the business done has been considerable. The import of Australian hides during January has been extraordinarily large, but of all other articles the arrivals have been unusually small. Higher prices have been established at each public sale, and have been confirmed by the sales by private contract. The stocks, which were generally small at the end of January, are further greatly reduced by sales since the commencement of the present month.

Hemp, flax, jute, and coir goods have sold slowly.

Scotch pig iron has changed hands at 60s 6d, and 60s cash. Tin and tin plates have ruled heavy; but copper is in good request.

Linseed oil has been quoted at 27*l* 10s. Most other oils have supported previous rates. American spirits of turpentine have advanced to 37s per cwt.

The tallow market has continued steady, and, to-day, P. Y. C. on the spot, has sold at 60s 6d per cwt. Town tallow is 58s 6d net cash.

COTTON.

NEW YORK, January 24.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

	Sales.	Closing.	Middling.	Freights.	F.o.b.
New Orleans... Jan. 21	96000	⅝c higher ...	11¼c ...	9-16d equal to	6.39d
Mobile 21	49000	⅜c — ...	10⅞c ...	¼d —	6.08d
Charleston 23	14000	unchanged ...	10⅞c ...	7-16d —	5.93d
Savannah 13	9000	⅛c lower ...	10⅜c ...	⅜d —	5.81d
New York 24	18000	⅛c bigher ... Upl.	11¼c ...	3-16d —	6.09d
Total.....	186000 bales			Average	6.06d

There is now an excess in receipts of 421,000 bales over last year, when the crop reached 3,851,000, and of 1,321,000 bales over 1857-8 (crop 3,114,000).

New York Market—Improved accounts from Liverpool this week have caused renewed activity in our market. The demand has been general, and being further stimulated by advancing markets at the South, prices are here quoted ¼c to ⅜c higher on the week. The transactions reach about 18,000 bales, of which 10,000 bales in transitu, on the basis of 11¼c for middling New Orleans, with 9-16d freight. Middling Uplands on the spot is worth 11⅜c to 11½c. The market closes steadily.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts. Week's Receipts.	Since 1st Sept.	Exports for the Week. To Great Britain.	To France.	To other For. Pts.
	bales	bales	bales	balea	bales
1859-60.....	163000	2611000	65000	24000	14000
1858-59.....	120000	2190000	40000	12000	15000
1857-58.....	69000	1290000	54000	15000	9000
1856-57.....	102000	1842000	52000	13000	13000
1855-56.....	84000	1817000	50000	15000	19000
1854-55.....	76000	1124000	46000	7000	20000

	Exports Since First September. To Great Britain.	To France.	To other For. Pts.	Total.	Stock.
	bales	bales	bales	bales	bales
1859-60.....	1039000	278000	183000	1450000	1038000
1858-59.....	650000	279000	178000	1107000	870000
1857-58.....	437000	156000	107000	700000	577000
1856-57.....	415000	180000	125000	720000	802000
1855-56.....	637000	224000	168000	1029000	647000
1854-55.....	571000	128000	90000	789000	314000

Thus the receipts show an increase of 421,000 over those of last year, and an increase of 1,321,000 over 1857-58, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock.
Compared with last year.....	Inc.389000	...Dec. 1000	...Dec. 45000	...Inc. 343000	...Inc. 168000
Compared with 1857-8.....	Inc.602000	...Inc.122000	...Inc. 26000	...Inc. 750000	...Inc. 461000

Southern Markets, by Telegraph—The Southern markets have also been influenced by the Liverpool advices being more favourable than anticipated. At the same time, a slight falling off in the receipts at New Orleans has contributed an additional stimulus, so that that market has been quite excited during the week—the sales reaching 96,000 bales—while the eagerness of buyers has forced up prices ¼c to ⅜c per pound. At Mobile a steadier course has been pursued, and though a large business has been done, prices are only ⅛c higher, and Liverpool middling may still be bought at 10¾c. The Atlantic markets have also been moderately active, with gradually improving prices for the better grades, while the lower qualities are irregular. Freights to Liverpool are generally unchanged though there is an easier tendency at Mobile. Sterling exchange is also unaltered. We refer to our table above for latest telegraphic quotations, with price free on board, with freight at each point. The average at all ports is now 6.06d. Receipts—The week's receipts by mail dates show some recovery upon the recent decline, which was caused by the holidays. They sum up 163,000 bales, against 120,000 in the corresponding week last year, and thus the total excess is increased to 421,000 bales. The total receipts now amount to 2,611,000 bales. By telegraph we learn that the receipts at the Gulf ports for the succeeding week just equal those of same week last year; so that any excess in our next tables will depend on the receipts at the Atlantic and smaller ports. The Mississippi has risen eight inches during the week, by telegraph, and the deliveries at Charleston and Savannah are larger than for some weeks past during the holidays. Crop—The course of receipts is so entirely confirmatory of our estimate that the crop will exceed 4,300,000 bales, as to leave us little to say. The present excess in receipts—421,000

bales—added to the last crop of 3,851,000 bales (were there no further excess) would make the crop 4,272.000 bales.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq, of Manchester.*

A large amount of business was transacted in the cotton market on one or two days in the early part of the past week, and in many cases, owing to a little excitement in the market, a decided advance was obtained upon our last week's quotations. The market has become much quieter during the last three days, and any improvement in prices has been again conceded. The business of the week does not quite equal the import, which continues liberal. There is little or no change to notice in long-stapled kinds or in East India. The sales to-day are estimated at 7,000 bales. The market is inactive. The reported export amounts to 8,660 bales, consisting of 3,870 American, 1,530 Brazil, and 3,260 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The late advance in the value of money has had the effect of checking the demand for goods in the manufacturing districts, both for home use and export; nevertheless, there has been no anxiety shown to press sales, and prices have been supported. The stocks everywhere are very low, and manufacturers still complain of a want of profit on woollen goods. Wool, therefore, has been sparingly dealt in, and the quotations have shown a tendency to give way. Iron has commanded extreme rates, and a full average business has been passing in coals.

MANCHESTER, Feb. 9.—If any change has occurred this week, it has been in the direction of stiffer prices with scarcer goods. The current demand has been very steady, but not extensive, being chiefly limited by the length of time almost universally required for delivery. It may be said to be a general experience of both spinners and manufacturers, that new orders come in sufficiently in even quiet weeks to prevent progress in clearing off old orders taken in the weeks of large trade. Delay in the completion of contracts is also experienced from the difficulty of filling the excess of new looms with operatives. Export yarns have been quite firm, with moderate sales; home yarns have been rather more against the buyer, sometimes to the extent of ⅛d. Cloths have been sold moderately at very full rates for delivery within a month, and offers have been, in some cases, made in to April and May at very little less. Telegrams to 16th ult. from Calcutta, report no great change there, but bring better accounts from China, though it may be questioned whether the latter have not been already anticipated here by January purchases. Accounts from some smaller markets, such as the River Plate, have been highly satisfactory.

HUDDERSFIELD.—Business has not been so brisk as of late, but this would seem to have resulted as much from the smallness of and want of variety in stocks in the Cloth Hall and shops as from indisposition to buy on the part of purchasers. The shipping demand for low goods and unions has fallen off again. Wools continue very firm in price in the local market, and stocks in the staplers' hands offer very small choice for selection.——LEEDS.—Stocks continue very low in the warehouses, and are not likely to accumulate at present, inasmuch as the production barely keeps pace with the demand. The flax and yarn trade of the district continues good, the export trade being better than it has been for some weeks.——HALIFAX.—There is a tolerably satisfactory business doing in yarns, and spinners continue well employed. In piece goods there is a steady demand for materials adapted for spring and summer wear; the stocks are within a moderate compass, and manufacturers are busy working to order. The sales of wool have been small, with a tendency to rather diminished prices.——ROCHDALE.—Wool—There was rather more business done at prices rather below those current last week. Flannel—We had a much better market than a week ago, and more buyers in town. The Yorkshire trade is quiet, yet healthy, and generally stocks are but small.——BRADFORD.—Wool—The concessions in price made by the staplers last week caused a few sales to be effected, but during the present week little or nothing has been done. Skin wool is becoming very abundant, and will exercise a depressing influence upon combing wools generally. In noils and shorts the trade keeps steady and prices also. Yarns—The yarn trade is still very depressed. The export houses are taking in their contracts given at the close of last year, but are not giving out fresh orders. Pieces—The piece market is very quiet. The continued absence of the American houses causes many manufacturers to be doing but little business.——LEICESTER.—The hosiery trade continues in a satisfactory condition. Manufacturers are well employed with orders in hand, and all branches that are usually busy at this time of the year are now very brisk. In the country hosiery districts business is in a healthy state. The workpeople are generally well employed. Yarns are a good sale at late prices, and spinners are fully engaged. The wool market continues steady, high prices being realised for all good sorts.——NOTTINGHAM.—There is no improvement whatever in the lace trade. There are a few orders for muslins in the market, and plain goods are also in request. The silk department remains in the same quiet state as for some weeks past. In hosiery there is a good business doing. The home buyers have purchased liberally, and business is in a prosperous state. There is not much stock on hand, and the workpeople are fully employed. Yarn firm.——DUNDEE.—Our market has ruled tolerably firm, and prices, generally, have been well supported.——BELFAST.—Linens have sold at full quotations; but flax has ruled heavy.——GLASGOW.—The wool trade has remained steady. Blackfaced laid is in good request, and prime clips are scarce. Laid Cheviots are not quite so much inquired for. White washed half-breds and Lesters are easily sold at full rates.——BIRMINGHAM.—Almost the only feature to note in connection with the trade of the town since our last report is the continued steady improvement in the home trade, for which the orders are increasing daily. The manufacturers have now a good number on their books, some of them two or three weeks beforehand; and in no respect is there any cause for complaint of trade being dull, or of employment for the artisans being scarce. The iron trade is a little flat, principally in consequence of the shipping orders being limited; but the producers of the best brands of finished iron are pretty well off for orders, and prices, so far as relates to that description of iron, are firm. The price of pig iron is steady, and stocks are not increasing materially. The coal trade is remarkably active; recently, in consequence of some scarcity of the commodity, coke from Durham and the North has been imported into the district.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Jan. 25.—Flour was dull and lower to-day. Sales 5,500 bbls State and Western, 1,250 bbls Southern, and 300 bbls Canadian, within the annexed range:—Superfine State, 5 dols to 5.15 dols; extra State, 5.25 dols to 5.35 dols; superfine Western, 5 dols to 5.15 dols; common to choice Western, extra, 5.25 dols to 6.80 dols; extra Genesee, 5.65 dols to 7 dols; mixed to straight Southern, 5.40 dols to 5.75 dols; straight to good extra ditto, 5.80 dols to 7 dols; choice extra family and bakers' brands, 7.25 dols to 8 dols; rye flour, 3.65 dols to 4.45 dols; corn meal, 3.80 dols to 4.20 dols. Wheat was very quiet, sales having been confined to 5,000 bushels, at 1.60 dol for very choice white Kentucky, and 1.40 dol for white Canada in store. Corn was purchased to the extent of 25.000 bushels Jersey and Southern white and yellow, at 78c to 81c. Sales were also made of 1,500 bushels rye, at 90c to 92c; and 12,000 bushels barley, at 78c for State, and 80c for Western.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

The supplies of English wheat on offer in the whole of the leading markets held this week have been very moderate, but in somewhat improved condition. Good dry qualities have changed hands steadily, at very full prices; but damp parcels have met a dull inquiry, at barely late rates. At the outports, foreign wheat has been in good supply, and in active request, on former terms. Although the receipts of barley have somewhat increased, the trade has ruled steady, at extreme quotations. New malt has moved off steadily, old parcels slowly, on former terms. There has been a steady inquiry for oats, beans, and peas, at full prices. Flour has commanded quite as much money as of late.

Throughout the Continent, very little business has been done in wheat for export to this country. All spring corn has moved off steadily, at very full prices. In the United Sates, both wheat and flour have met a dull inquiry, owing to the continued increase in the stocks.

The supplies of wheat still in stock in this country are seasonably large; but those of spring corn are very moderate. There is no anxiety on the part of the growers to sell wheat at present rates.

In Scotland, most of the markets have been well supplied with wheat, in which about an average business has been passing, at full quotations. Fine barley and oats have continued to sell at fully late currencies, and other articles have ruled firm in price.

The Irish markets have been somewhat heavy for wheat. In prices, however, very little change has taken place. Oats have been in improved request, and there has been a good business doing in Indian corn. The shipments to England, however, have been on a very moderate scale.

The few samples of English wheat on offer in to-day's market were disposed of, at fully Monday's currency. Foreign wheat was firm in

Price. All kinds of spring corn commanded a ready sale, at slightly enhanced rates. The flour trade was firm.

Mr Ed. Rainford states that only two vessels have arrived off coast since the 2nd inst. laden with grain, and that only a moderate business has been passing in floating cargoes at previous rates.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—Business has been partially suspended owing to the suspense felt respecting any change in the duties. The market, although inactive, remains firm, with partial inquiries by private contract at last week's rates, and the home deliveries continue satisfactory. Refiners have purchased West India with more freedom, the sales to yesterday reaching 1,535 casks, including 401 casks Barbadoes by auction: middling soft to fine, 39s 6d to 45s 6d; brown and low, 36s 6d to 39s per cwt. Arrivals keep moderate, and the stock at the chief ports of Great Britain may be computed at 92,000 tons, against 86,000 last year, and 84,000 tons in 1858.

Mauritius.—Small transactions have occurred at previous rates by private contract.

Bengal.—500 bags fine Bally have sold at 41s 3d per cwt.

Foreign.—1,400 bags Manilla have sold by private contract: low unclayed, 32s 3d; and common clayed at 39s. 400 casks Cuba are reported to 40s to 43s 6d; also 200 casks Surinam, and 800 boxes Havana.

Refined.—The market opened flatly, but there has since been rather more inquiry from the trade for low to fair qualities at 51s to 52s 6d per cwt. Crushed and pieces occasionally sold upon easier terms.

MOLASSES.—100 puns West India have changed hands this week. Antigua, 16s 6d to 17s; common Jamaica, 15s; and a parcel of old Cuba muscovado at 17s per cwt.

COCOA.—The chief feature of interest to notice this week has been the decline of 3s to 4s upon Grenada cocoa, of which 165 bags sold at 54s 6d to 57s. Yesterday, however, the depression was recovered, 282 bags bringing 57s 6d to 63s per cwt.

COFFEE.—A steady business has been done in plantation Ceylon, and the sales went off without full prices, especially for the better qualities. 530 casks 890 barrels and bags found buyers: good to fine marks, 78s to 92s; fine ordinary to good middling, 62s to 76s. 2,550 bags 145 casks native growth partly sold from 58s to 64s per cwt for ordinary to superior bold picked. A few parcels have been taken privately, and there are still buyers at previous rates which holders generally seem indisposed to accept. Two floating cargoes of St Domingo have sold for the Mediterranean at 60s per cwt.

TEA.—The market continues very steady, with a fair demand for good descriptions of congou by the trade. At the public sales which concluded on Monday, 7,000 packages sold, and prices ruled rather irregular. Common congou, 1s 5d to 1s 5½d per lb. On the 7th inst., 6,028 packages about one-fourth part sold at the previous value; also, 1,800 packages of Assam growth. The stock in the United Kingdom amounts to 62,000,000 lbs, against 66,000,000 lbs in 1859.

RICE.—The transactions have been of very moderate extent, including low Bengal at 9s 4½d to 9s 6d; low and common old Rangoon, at 7s to 8s; and Java, at 10s. By auction 1,360 bags middling new Rangoon were taken in at 9s 6d per cwt.

SAGO FLOUR.—391 bags were bought in at 16s 6d per cwt.

RUM.—The market is still rather quiet, with limited operations at previous rates: Leewards, low to good, 1s 8d to 1s 10d; Mauritius proof, 1s 7½d; Jamaica, 3s 10d to 4s per gallon.

SPICES.—504 boxes cassia lignea were bought in at 105s to 112s per cwt for second and first piles. 26 cases Cochin ginger realised 90s per cwt. 306 bags Zanzibar cloves sold at 3⅞d to 4d, being nearly ⅛d decline. 200 bags Singapore white pepper were mostly bought in at 7¼d to 7⅜d. 1,664 bags greyish to fair Alleppy were held at 5¼d. 7 pkgs common and damaged mace, 1s 3d to 1s 4d. 12 cases nutmegs, small to fine brown, 1s 6d to 2s 2d. Of 413 bags pimento, a small proportion realised 4d to 4⅛d per lb. Business has been done in rough Bengal ginger at 25s per cwt.

SALTPETRE.—1,913 bags Bengal partly sold: refraction 5 to 4, 41s 6d to 42s; 14½ to 3½, bought in at 38s to 42s 6d. 780 bags Bombay went at 29s to 32s, for refraction 68½ to 36½, per cwt. Transactions by private contract have been very limited.

COCHINEAL.—79 bags partly sold: Honduras silver, 3s 2d to 3s 9d; low to good black, 3s 9d to 4s 5d per lb, being the previous value.

LAC DYE remains without further change to report. 234 chests, offered by auction on Tuesday, were mostly taken in at 4d to 8d per lb for low to middling qualities. Privately, there is less inquiry, still the market keeps very firm.

OTHER DYESTUFFS.—An improved demand has sprung up for Gambier by consumers. 1,050 bales, in public sale, went 6d dearer, from 16s 3d to 16s 9d for common to middling quality. Holders now ask 17s. Cutch keeps steady at 28s to 28s 6d per cwt.

SHELLAC has realised a further advance both at public sale and by private contract, viz.: fair to good orange, 8*l* 5s to 8*l* 10s, common button, 7*l* 5s to 7*l* 10s; garnet, 9*l* 15s per cwt. The stock keeps very small.

METALS.—A quiet tone still pervades the market. Scotch pig iron is, however, very steady, owing to the number of works closed in Scotland. To-day the price was 60s per ton. British has not been much influenced by the advance upon this description. A few contracts have been made in spelter at 21*l* to 21*l* 5s; and the former price for arrival. Banca tin has declined in Holland; here the price is 136s, and Straits 130s per cwt. Copper remains stationary, and there is no change to notice in lead.

JUTE.—The market was firm in the early part of the week, and 5,500 bales sold for arrival, of which particulars did not fully transpire. On Wednesday, however, the large public sales rather unsettled prices, and 8,319 bales brought forward went off irregularly at from 12*l* to 20*l* per ton for ordinary to good quality.

MANILLA HEMP is more readily saleable, and business has recently been done by private contract in common at about 22*l*. 112 bales in public sale realised 22*l* 12s 6d per ton, being higher.

HIDES.—160,000 East India by auction, yesterday, sold at full prices to ¼d per lb advance, the demand from the home trade and consumers being active.

LINSEED.—Supplies arrive freely from the East Indies. Several parcels of Calcutta have sold afloat at 48s 3d to 49s 3d: on the spot, 49s to 50s, and 52s per quarter for Bombay.

OILS.—The chief feature to notice in fish has been the advance on pale seal to 37*l*. Olive has attracted more attention, and the market is firmer. Gallipoli, 59*l* 10s; other kinds, 51*l* to 54*l* 10s. The market for palm has become firmer, and fine Lagos is worth 47s. Cocoa-nut finds steady buyers at improved rates: Cochin, 44s 6d to 45s 6d; Ceylon, 42s 6d to 43s. Both descriptions are influenced by the rise upon tallow. Linseed oil is quiet, with a supply rather in excess of the demand, and 27s 6d may be considered the nearest value on the spot. Rape unaltered: foreign refined, 38s 6d; brown, 36s 6d: the former sold for late deliveries as high as 42s per cwt.

TALLOW.—The improved tendency of prices last week has continued during the present one, and the advance since Friday is 6d to 9d per cwt. This morning 1st sort Petersburg Y. C. closes at 60s 3d to 60s 6d; for delivery in the last three months, 53s 9d to 54s per cwt. The trade have bought to a moderate extent.

PARTICULARS OF TALLOW.—Monday, February 6.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—There was only one public sale of sugar to-day, consisting of Madras, on which the duty had been already paid. 3,369 bags chiefly sold at 31s 6d to 33s 6d for brown to low yellow. 278 casks West India sold for the week. Privately, 6,000 bags Manilla changed hands: unclayed, 32s 3d to 33s 6d per cwt.

COFFEE.—1,007 bags 27 casks native realised 57s to 60s 6d. 48 casks 18 barrels plantation realised the previous value. 138 cases 142 barrels 13 bags Neilgherry brought 68s 6d to 73s. A cargo of St Domingo sold for a near port at 58s per cwt.

RICE.—634 bags Ballam sold at 9s 6d to 10s. 1,410 bags middling white Bengal were bought in at 11s to 11s 6d per cwt.

SALTPETRE.—457 bags Bengal were taken in above the value. A parcel of very low Bombay was bought in at 29s to 30s.

COCHINEAL.—302 bags were sold at 1d to 2d advance.

SAFFLOWER.—95 bales Bengal sold at 5s to 10s cheaper.

OILS.—Palm part sold at 39s to 46s 6d. Cocoa-nut: Cochin, 45s 3d to 46s 6d; Ceylon, 42s 3d to 43s per cwt. 75 tuns sperm, 94*l* 10s to 97*l* per tun.

TALLOW in the public sales went dearer.

ADDITIONAL NOTICES.

REFINED SUGAR.—There is no alteration to note in the home market for refined sugar. Dutch crushed very quiet.

GREEN FRUIT.—Market improving, stock diminished, and consumption good, Some cargoes oranges, sold by Keeling and Hunt at public sale, went freely at an advance of from 1s to 2s per box. Valencia oranges have arrived by steamers, and meet with a ready sale. Seville sours advanced 5s per chest: none left in the market. Lemons lower. Nuts of all kinds without alteration.

DRY FRUIT.—The fruit trade has been stagnant of late, owing to an impression that the duty may be altered in the forthcoming budget. New low currants are wanted, at from 35s to 37s, and any to be met with at that price are readily taken. Meanwhile dealers are getting very low in stock, and large clearances may be expected as soon as the present uncertainty is removed, whatever be the issue.

ENGLISH WOOL.—The market continues quiet; no change in prices.

COLONIAL AND FOREIGN WOOL.—No change in wool. The market is firm. The public sales will commence on Thursday, 1st March: 23,944 bales arrived to date.

FLAX.—Nothing doing.

HEMP.—Market very quiet and but little doing; prices rather lower this week.

COTTON.—Sales of cotton wool from Friday, 3d Feb., to Thursday, 9th, inclusive:—4,300 bales Surat, at 4¼d to 5½d for very middling to good fair; 1,000 bales Madras, at 4½d for fair Western, and 5⅛d to 5⅝d for fully fair to fully good fair Tinnivelly. In the early part of the week an active demand prevailed, and a large business was done in Surat at an advance in some cases of ⅛d per lb; in Tinnivelly a fair amount of business was also transacted at full prices. Within the last few days there has been less doing, but prices are well maintained, and holders of Surat offer very little cotton at present rates. Yesterday, 420 bales were offered at public sale, and bought in, viz.:—270 seedy Carthagens, at 3d; 70 African fair to good fair, 6⅛d to 6⅝d; 60 Tinnivelly middling fair, 5⅛d.

TOBACCO.—The market remains steady for good and choice descriptions of home trade qualities, with sales of a limited character: common and ordinary sorts neglected.

METALS.—There has been a very quiet week in metals. Copper keeps firm in price, and some considerable orders were brought by the last Bombay mail. Iron is quiet for all descriptions, and Scotch pig has receded somewhat. Tin is flat, both in English and foreign. Spelter is lower in price for arrival, and on the spot little is doing. Lead keeps firm. Tin plates are depressed.

METROPOLITAN CATTLE MARKET.

MONDAY, Feb. 6.—The total imports of foreign stock into London last week amounted to 1,434 head. In the corresponding week in 1859 we received 2,012; in 1858, 680; in 1857, 1,257; in 1856, 938; in 1855, 789; and in 1854, 1,982 head.

From our own grazing districts the arrivals of beasts fresh up were by no means extensive, but their general quality was tolerably prime. For all breeds there was a fair, but by no means active, inquiry, at last week's currency. The primest Scots and crosses sold at 4s 10d per 8 lbs. The trade closed flatly. With most breeds of sheep we were rather scantily supplied, even though the number was slightly on the increase. Compared with this day se'nnight, no change took place in the quotations. The mutton trade though healthy, was far from active. The best old Downs sold at 5s 6d per 8 lbs. Although the supply of calves was very moderate, the veal trade ruled somewhat heavy, and late rates were barely supported.

SUPPLIES.

	Feb. 8, 1858.	Feb. 7, 1859.	Feb. 6, 1860.
Beasts	3733	3464	3930
Sheep	14785	16600	18760
Calves	99	133	128
Pigs	273	400	280

THURSDAY, Feb. 9.—Notwithstanding that the supply of beasts in to-day's market was rather limited, all kinds met a slow sale, at Monday's currency. We have to report a very inactive demand for sheep, the show of which was very moderate, at late quotations. The best old Downs sold at 5s 6d per 8 lbs. Calves came slowly to hand; nevertheless, the veal trade was in a sluggish state, on former terms.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	4	5	6
Second quality ditto	3	8	4	2	Large coarse calves	4	10	5	4
Prime large oxen	4	4	4	8	Prime small ditto	5	6	5	8
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto	4	4	4	8	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs...	23	0	29	0

Total supply—Beasts, 922; sheep, 2,950; calves, 120; pigs, 212.
Foreign supply—Beasts, 120; sheep, 500; calves, 70.

NEWGATE AND LEADENHALL.

FRIDAY, Feb. 10.—The supplies here to-day are seasonably good. On the whole, a full average business is doing, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	6	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	4	5	0	Small pork	4	4	5	0

HOP MARKET.

BOROUGH, Monday, Feb. 6.—Our market remains firm, and, with the exception of two or three large speculative sales, the demand has been very limited. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Feb. 10.—Our market continues firm, at full prices.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 4*l* 4s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 9s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 4s to 1*l* 10s per load. A moderate supply.

CUMBERLAND.—Meadow hay, 2*l* 12s to 4*l* 4s; clover, 3*l* 15s to 5*l* 0s; and straw, 1*l* 5s to 1*l* 10s per load. Trade steady.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Feb. 6.—During the past week the arrivals coastwise have been greater than at any period during this season, and a further decline in prices has been the consequence. The following are this day's quotations:—York Regents, 90s to 130s; Lincolnshire ditto, 85s to 95s; Dunbar ditto, 100s to 120s; ditto reds, 90s to 100s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; ditto Rocks and reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, Feb. 9.—Moderate supplies of potatoes have come to hand since our last report, and generally in fair condition. Trade keeps pretty good, and prices firm, as follows:—York Regents, from 140s to 150s; ditto Flukes, 130s to 140s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 80s to 95s; Dunbars, 120s to 140s per ton.

COAL MARKET.

WEDNESDAY, Feb. 8.—Bates's West Hartley 14s 3d—Broomyholm Steam 14s—Buddle's West Hartley 14s 6d—Burnhope Gas 13s 6d—Byass's Bebside West Hartley 15s—Davison's West Hartley 15s—Howard's West Hartley 15s—Tanfield Moor 13s 9d—Tanfield Moor Bute's 13s 9d—Walker Primrose 14s—West Hartley 15s—West Wylam 15s—Wylam 16s—Eden 19s 9d—Eden Main 19s 9d. Powell's Duffryn Steam 22s 6d. Ships at market, 143; sold, 115.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 10.—Since the close of our public sales there has been a lull in the demand, as is usually the case after such occasions, where the trade have had an opportunity of freely supplying themselves. Prices, however, continue very firm.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 10.—Grain market steady. Wheat in better demand at full prices. Flour dull. Indian corn 6d to 1s dearer; choice Galatz, 34s; Ibrail, 33s. Egyptian beans, 35s. Oats a shade dearer, oatmeal and barley steady.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 10.—For both Welsh and Staffordshire manufactured iron there has been throughout the past week a fair demand, at about previous rates. The market for Scotch pig iron has continued quiet all this week, and closes at a decline of about 1s per ton. Copper remains firm. Lead has been in good demand, at higher rates. Tin and tin plates are without alteration.

The Gazette.

TUESDAY, Feb. 7.

BANKRUPTCY ANNULLED.

D. Richards, Tredegar, Monmouthshire, draper.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending January 28 amounted to 455,770*l*, and for the corresponding week of 1859 to 423,870*l*, showing an increase of 31,900*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 193,784*l*, and for the corresponding week of last year to 181,465*l*, showing an increase of 12,319*l*.

GRAND TRUNK OF CANADA.—This railway is now in full operation between Quebec and its Eastern terminus, with manifest advantage to the entire district it traverses. The company have put the fares down very low indeed—1½c per mile for first class and 1c for second class; thus, from St Paschal to Point Levi the fares are 1·55 dol for first and 1 dol for second class. Return tickets are also low in proportion, and the freight tariff is equally low.

GREAT SOUTHERN AND WESTERN.—The report of the directors of this company states that the total traffic receipts for the half-year ending the 31st of December last amounted to 191,065*l*, and for the corresponding half of 1858 to 173,390*l*, showing an increase of 17,675*l*, of which 5,427*l* was derived from passenger traffic, 10,567*l* from goods traffic, and 1,396*l* from cattle traffic. The net surplus revenue for the half-year amounted to 107,873*l*, out of which the directors recommend a dividend at the rate of per cent. per annum on the consolidated stock of the company.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Feb. 6.—The railway market has been very dull, and in most of the chief British stocks a fractional decline is shown. Foreign descriptions, particularly Lombardo-Venetian, have shown increased heaviness. Pernambuco, however, were firmer, and San Paulo closed steadily at ¼ to ⅜ discount. In American securities the shares of the Illinois Central declined 1 dol. There has not been much doing in mines, and prices generally exhibited no change; but, in two or three cases, an advance has taken place. In joint stock banks, Ottoman improved 19½ to 20. No movement of importance occurred in miscellaneous descriptions. The New Canadian Loan was last quoted 2⅜ to 2⅝ premium scrip, and 100⅝ to ¾ bonds; Ocean Marine, 2 to 2½ premium; Universal, ⅝ to ¾ premium; and Bank of Turkey, ⅛ discount to par. The settling-day in the latter shares is fixed for Thursday, the 16th, and in the San Paulo Railway for Monday, the 13th.

TUESDAY, Feb. 7.—The railway market was inactive, and closed at a further slight decline. York and North Midland showed the principal heaviness, leaving off at 78¾ to 79¼, or ½ per cent. lower. The colonial and foreign markets were also rather flat, especially as regards Indian guaranteed, Grand Trunk of Canada, and Lombardo-Venetian. Pernambuco were dull at 1½ to 1¾ discount, and San Paulo at ⅝ to ¾ discount. American securities showed a tendency to depression, particularly those of the New York and Erie and Pennsylvania Central Railways. The transactions in mines were moderate, and in several cases a decline was established, the most conspicuous being in St John del Rey. No change of importance occurred in miscellaneous descriptions.

WEDNESDAY, Feb. 8.—The railway market was not generally affected by the fall in the funds, owing in a great measure to the good dividends that continued to be announced. To-day, after the regular hours of business, the proposed distribution of the Great Western was made public, and an advance immediately took place to 68 to ½, or about 2 per cent. higher than yesterday. In colonial descriptions, Grand Trunk of Canada declined to 34¼ to 35¼. The foreign market was dull. The changes in mines were unimportant. In joint stock banks a reaction occurred in Ottoman to 19 to ½, and, in miscellaneous descriptions, Canada Land advanced.

THURSDAY, Feb. 9.—In the railway market the principal feature was a renewed demand for South-Eastern, which consequently advanced to 85⅞ to ⅞, or ⅝ higher than yesterday. Foreign descriptions were quiet, and in some cases slightly higher. Lombardo-Venetian closed 1⅛ to ¼ premium; Pernambuco, 1 discount; Bahia, ⅝ to ¾ discount; and San Paulo, ¼ to ⅜ discount. No change of importance took place in American securities or mines. The new Victoria Government debentures were rather flat at 110 to ¼. In joint stock banks, Ottoman were again lower, at 19 to ½. In miscellaneous descriptions a decline occurred in Atlantic Telegraph and Australian Agricultural, and a recovery in Mediterranean Extension Telegraph. Canada Loan was last quoted 2 premium scrip, and 100 to ¼ bonds; Ocean Marine, 2 to ½ premium; Universal Marine, ½ to ¾ premium; and Bank of Turkey, ⅝ to ¾ discount.

FRIDAY, Feb. 10.—The transactions in the railway share market were limited, but a further improvement took place in values. The foreign and Colonial lines also showed a slight advance. Joint stock bank and miscellaneous shares were in steady request.

N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the anthor, Harley treet, Cavendish square, W

HOLLOWAY'S PILLS AND OINTMENT.—Dyspepsia.—Disordered Digestion.—Some persons are particularly prone to stomach and liver complaints; while in others these diseases are produced by sedentary habits, irregular living, or mental disquietude. The liver and stomach being distempered, the heart and lungs soon sympathise with them, and both mind and body shortly suffer. These admirable pills act directly on these organs, and soon restore them to a natural and healthy condition. The imprurities are discharged from the system, the respiratory organs are relieved, the heated blood cooled, and the bilious secretion regulated, the heart's action becomes tranquil, the nerves acquire strength, and health benignly dawns again, and happiness returns, and the patient is thoroughly restored to easy digestion, cheering thoughts, and refreshing repose.

ANOTHER CURE THIS WEEK OF LONG-STANDING ASTHMA by DR LOCOCK'S PULMONIC WAFERS.—"Caldicot, Feb. 3, 1860. Sir,—I was afflicted for years with a most violent asthma, with shortness and difficulty of breathing, and at times a cough so bad as to cause me violent vomiting. I had been ill some years, and tried nearly all the medical men about here. I found relief (from Dr Locock's Wafers) almost immediately, and have followed my employment ever since. JAS. GARDNER, Market Gardener. Witness, Mr THOS. I. JONES, Chemist, 5 High street, Newport." To singers and public speakers, Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

NO MORE MEDICINE.—For Habitual, Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD —Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D.F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaits, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, at 1s 1½d; 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly, London; and all grocers and chemists.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

79 St Paul's churchyard, London.

DR. DE JONGH'S (Knight of the Order of Leopold of Belgium) LIGHT-BROWN COD LIVER OIL administered with the greatest success in cases o CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted, Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NON CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,
ANSAR, HARFORD, and CO., 77 STRAND, LONDON, W.C

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d an 31s 6d; Postage, 1s. Double do to, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effect on the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Genorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years, nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I. Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S CELEBRATED SHERRIES.

RAIL PAID TO ANY STATION IN ENGLAND.

THOMAS NUNN AND SONS,

WINE, SPIRIT, AND LIQUEUR MERCHANTS,

(ESTABLISHED 1811),

21 LAMB'S CONDUIT STREET, FOUNDLING HOSPITAL, W.C.,

Respectfully call the attention of the public to the SHERRIES of the above eminent shipper: they are extremely soft and nutty, and so perfectly mellow and free from heat or the slightest approach to acidity, as to render them like favourites both with the connoisseur and the invalid.

ECONOMY AND EXCELLENCE.—

E. MOSES and SON, Merchant Tailors, General Outfitters &c., undertake to combine economy and excellence in all articles of Clothing, in a manner, and to an extent, quite beyond the reach of any other firm in London or elsewhere. The vast scale on which their business is conducted enables them to accept prices that to traders with a less extensive list of customers would be utterly ruinous.

Juveniles' Clothing in every variety.

The Bespoke Tailoring Department contains fabrics of every description from the lowest to the highest qualities. The most skilful English and foreign cutters are employed, ensuring the latest and most gentlemanly styles.

A large and well-assorted stock of Hosiery, Drapery, Shawls, Mantles, Dresses, Underclothing, Hats and Caps, Boots and Shoes, &c.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the history of British costume, with rules for self-measurement, and lists of prices, gratis, on application, or post free.

E. MOSES and SON'S establishments are as follows:—

LONDON—Aldgate and Minories (opposite Aldgate church); and New Oxford street (corner of Hart street).

COUNTRY BRANCHES—Sheffield and Bradford, Yorkshire.

THE "INDISPENSABLE" SUIT,

made of various colours and patterns, particularly adapted to walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced; price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and New Oxford street, corner of Hart street.

THE GREAT EASTERN.—

An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Minories and Aldgate, and New Oxford street, corner of Hart street.

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

ELECTRO-SILVER PLATE.—

The largest and most varied Stock in London of Elegant Dinner, Tea and Coffee Services, Urns, Kettles, Dish Covers, Side Dishes, Trays, Waiters, Presentation Plate, &c., is on view in the splendid show-rooms of the Panklibanon General Furnishing Ironmongery Company, 56 and 58 Baker street. Public attention is particularly invited to the following list of prices, which may be taken as an index to the whole:—

	Fiddle Pattern.	Double Thread.	King's Pattern.
	£ s d	£ s d	£ s d
Table Spoons..per doz.	1 11 6	2 2 0	2 10 0
Dessert ditto	1 3 0	1 10 0	1 15 0
Table Forks	1 11 6	2 2 0	2 10 0
Dessert ditto	1 3 0	1 10 0	1 15 0
Tea Spoons	0 15 0	1 0 0	1 5 0

A single article at the same rate. Tea and Coffee Services from £4 4s; a set of four Dish Covers, £10; a set of four Corner Dishes, forming eight Dishes, £8. And some beautiful articles for presentation of the most artistic designs, and of first-rate quality and finish. Old silver bought or taken in exchange. Electro-Plating and Gilding done on the shortest notice. Illustrated books sent free.

N.B. Colza oil, finest quality, 4s per gallon.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormoln ornaments and two sets of bars, £3 10s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu arnaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR

SILVER.—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d

Any article to be had singly at the same prices. An Oak Chest to contain the above, and a relative number of knives, &c., 2l 15s. Tea and Coffee Sets, Dish Covers, and Corner Dishes, Cruet and Liqueur Frames, &c., at proportionate prices. All kinds of replating done by the patent process.

DISH COVERS AND HOT-WATER

DISHES in every material, in great variety, and of the newest and most recherché patterns. Tin Dish Covers, 6s 6d the set of six; Block Tin, 12s 3d to 27s the set of six; elegant modern patterns, 35s 6d to 62s 6d the set; Britannia Metal, with or without silver plated handles, 3l 11s to 6l 8s the set; Sheffield Plated, 10l to 16l 10s the set; Block Tin Hot-Water Dishes, with wells for gravy, 12s to 30s; Britannia Metal, 22s to 77s; Electro-Plated on Nickel, full size, 11l 11s.

WILLIAM S. BURTON'S

GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illimited stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c, with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1a, 2, and 3 Newman street; and 4, 5 and 6 Perry's place, London.—Established 1820.

SPRING OVERCOATS.—

The Volunteer Wrapper, 30s; the Victor, 25s; the Inverness, 25s; the Pelissier, 21s; ready-made or made to order. The Forty-seven Shilling Suits made to order from Scotch, Heather, and Cheviot Tweeds and Angolas, all wool and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. Patterns, designs, and directions for self-measurement sent free. N.B.—A perfect fit guaranteed.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1853."

6 Edwards street, Portman square, London.

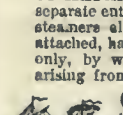
TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, tha Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.



BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

*AFRICA for New York direct, Saturday Feb. 18.
*Taking Passengers and Goods for Nassau and Havana, to be transferred at New York on board the R.M.S.S. Karnak.
AMERICA, for BOSTON, Saturday, February 25.
ASIA*, for NEW YORK direct, Saturday, March 3.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

*** IMPROVED ACCOMMODATION FOR PASSENGERS LANDING AND EMBARKING AT ST KATHARINE'S WHARF.—An additional and separate entrance, leading direct to and from the steamers alongside the wharf, with waiting-rooms attached, has been provided for the use of passengers only, by which all confusion and inconvenience arising from the goods traffic is avoided.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday morning. Feb. 8 at 11; 11 at 6. Chief cabin, 2l; fore, 1l 5s.

ROTTERDAM—Every Tuesday, Thursday, and Sunday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 34s 6d or 19s 0d.

ANTWERP, BRUSSELS, and the RHINE—The Rhine and Dolphin every Tuesday and Thursday, at 11 morning. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at 11 morn.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. Feb. 15 at 8. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday. Feb. 16 at 6 a.m. Chief cabin, 14s; fore, 10s. London to Paris, 1l.

PARIS, via CALAIS, direct—From London Bridge Wharf, every Tuesday and Saturday morning. Feb. 14 at 6; 18 at 11 Chief cabin, 14s; fore, 10s. London to Paris, 17s 8d.

BOULOGNE—From London Bridge Wharf, every Wednesday, Friday, and Sunday morning. Feb. 12 at 4; 15 at 7; 17 at 9; 19 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf, adjoining the Tower, every Wednesday and Saturday, at 10 morning. Fares: chief cabin, 25s; fore, 15s; deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning Chief cabin, 6s 6d; return, 10s; fore cabin, 4s; return, 6s.

NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning. Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d.

YARMOUTH—From London Bridge Wharf, every Wednesday and Saturday, at Four afternoon. Saloon, 8s; return, 12s: fore cabin, 5s; return, 7s 6d.

Offices, 71 Lombard street, 37 Regent circus, and 35 Cadenhall street; and St Katharine Wharf.

THE OAKERTHORPE IRON AND COAL COMPANY (Limited).—Capital £120,000, in 12,000 shares of £10 each.

COMMITTEE.

William Worswick, Esq., Leicester (Swannington and Coleorton Collieries, Leicestershire.)
Thomas Walker, Esq. (Patent Shaft and Axletree Company), Brunswick Ironworks, Wednesbury.
Frederick Palmer Morewood, Esq., Leamington (and Swadwick Collieries, Alfreton.)
Edwin Marshall, Esq. (Brown, Marshalls, and Co.), Birmingham.

MANAGER AT THE WORKS—Mr William Evans, formerly of the Dowlais Iron Works, Merthyr Tydvil.

CONSULTING ENGINEERS — Messrs Woodhouse and Jeffcock, Derby.

BANKERS—The Derby and Derbyshire Banking Company, Derby and Belper; Messrs Williams, Deacon, and Co., London; Messrs Spooner, Attwoods, and Co., London; Messrs Attwoods, Spooner, Marshalls, and Co., Birmingham.

SOLICITORS—Messrs Stewart and Baly, 6 Gray's inn square, London.

SECRETARY PRO TEM.—Mr Edward Corry.

Offices, 8 New Broad street, City, London, E.C.

The Oakerthorpe estates, comprising upwards of 1,000 surface acres, abounding in coal and ironstone of superior quality, are situate immediately contiguous to the town of Alfreton, and communicating with the Midland Railway by a branch line, intersecting the whole, at the Wingfield station, 14 miles north of Derby, in the immediate vicinity of the celebrated Butterley, Clay Cross, Swanwick, and Wingerworth collieries and ironworks.

These estates are held under leases for long terms for mining purposes at low royalties, viz., at the rate of 4½d per ton on coal, and 6d per ton on ironstone.

The minerals have been developed, workings carried out, and a blast furnace erected under the able supervision of Messrs Woodhouse and Jeffcock, the eminent mining and civil engineers, of Derby. Large quantities of coal and ironstone have been already raised, and their superior quality fully tested.

Shafts have been sunk, headings are being driven, railways are made, pumping and winding engines and other requisite machinery erected, and preparations are making for raising 2,400 tons of hard and furnace coal per week, and a sufficient quantity of ironstone for feeding two blast furnaces capable of making upwards of 280 tons of pig iron per week.

During the last two years the collieries and one blast furnace have been in active operation, the furnace producing iron of the highest character, and proving incontestably the excellence both of the stone and coal, and their adaptability to each other.

The pig iron and coal have both, from the first, found ready markets, and have given the greatest satisfaction to consumers. The demand for them is constantly increasing.

The coal and ironstone are got at extremely moderate rates, and limestone for fluxing, for which Derbyshire is celebrated, is procured in unlimited quantities, and at a low price, from the neighbourhood.

The whole of the materials for the manufacture of iron, whether pig or bar, being so readily obtainable, it is obvious that the locality is eminently adapted for the production of the best qualities of iron, at a minimum cost, and that works upon an extensive scale will pay a high per centage on the capital proposed to be employed.

The present proprietors have invested upwards of £60,000 in opening out the collieries and ironstone workings, sinking pits, erecting furnaces, pumping, winding, and blowing engines, engine-houses, fitting shops, managers' and workmen's houses, pneumatic lift, and all other machinery and plant (including 180 railway waggons) necessary for the efficient carrying on of the collieries and furnaces.

The second blast furnace in course of erection, and nearly completed, will ensure the consumption of the present yield of ironstone and the production of 280 tons of hot blast forge and melting pigs weekly as proposed.

The extreme purity of the furnace coal rendering it most suitable for puddling purposes, and the quality of the pigs having been most satisfactorily proved at some of the best works in Yorkshire and Staffordshire, it is proposed, hereafter, to extend the works, and to erect another blast furnace (the foundation of which is laid), with a mill and forge, to convert its produce into malleable iron, as thereby the profits of the undertaking will be materially increased, and the full benefits that should result from a vigorous working of the estates be obtained.

To ensure the most steady and complete realisation of the advantages to result from carrying out the foregoing plan, the lessees are desirous of forming a Joint Stock Company, with limited liability, and of assigning thereto all their interest in the leases, workings, machinery, stock, and plant, in consideration of the repayment of their outlay without bonus, contributing themselves at least one-fourth of the proposed capital of the Company.

The profits of the undertaking it is estimated will be fully equal to 15 per cent. per annum on the capital employed.

It is proposed to call up the capital by five calls of £2 each per share; the first call being payable on allotment; the second call, March 31; third, May 31; fourth, July 31; and the remaining £2 as the extension of the works may require.

Applications for shares may be addressed to the Secretary pro tem., at the offices of the Company, 8 New Broad street, London; to the Consulting Engineers, Messrs Woodhouse and Jeffcock, Derby; or to the Solicitors, Messrs Stuart and Baly, 6, Gray's inn square, London.

REPORT OF THE CONSULTING ENGINEERS TO THE COMPANY.

Midland road, Derby, Dec. 24, 1859.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

Gentlemen,—The mines of coal and ironstone referred to in the accompanying prospectus lie under a surface of about one thousand acres, and include all the more valuable seams of coal and rakes or beds of ironstone found in Derbyshire.

Both coal and ironstone can be worked at a moderate cost, and iron can be made here at as low a rate, and of as good a quality, as at any of the works in the county.

The iron has been sold in various parts of the Kingdom, and pronounced to be of excellent quality, and the coal finds a ready market at remunerative prices.

The works are very favourably situate in every respect, being within 200 yards of the Midland Railway, with which they have direct communication, for the ready transit of their produce, and all the materials for the production of iron lying on the spot, it is almost impossible for a property of this nature to possess more advantages.

The royalties to the lessors are low, being only 6d per ton on ironstone, and £75 per acre for coal, being 4½d per ton.

The whole of the results of past outlay are available for future operations.

We have read and carefully considered the Prospectus of your Company, and are of opinion that the prospects of the undertaking fully warrant the expectations held out therein.—We are, Gentlemen, yours faithfully,

WOODHOUSE and JEFFCOCK.

FORM OF APPLICATION FOR SHARES.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

GENTLEMEN,—I request you will allot me Shares in the said undertaking; and I hereby agree to accept the same, or any less number that may be allotted to me, and to pay the calls thereon, in conformity with the regulations of the Company.

Signature.
Name in full.....
Residence .....
Occupation, if any, or description .....

Printed forms may be had on application.

EAST KONSBERG NATIVE SILVER MINING COMPANY OF NORWAY, Limited.

Incorporated under the Joint Stock Companies Acts, 1856, 1857, 1858.

Capital, £150,000, in 30,000 shares of £5 each; deposit 5s per share on application, and 5s per share on allotment.

DIRECTORS.

Major General Pemberton, York house, Chertsey, Chairman.
William Barnard Boddy, Esq., M.D., Saville row, Walworth.
John C. Fuller, Esq., Woodlands, Isleworth.
Edward A. Lamb, Esq., Iden Park, Rye, Sussex.
James Lawrie, Esq., 33 Lombard street.

BANKERS.

The City Bank, Threadneedle street, E.C.

SOLICITOR.

James Bourdillon, Esq., Jun., 30 Great Winchester street, E.C.

CONSULTING ENGINEER.

John Hamilton Clement, Esq., F.G.S., &c., &c., Kensington.

SECRETARY.

Mr George Searby, offices, 35 Moorgate street, E.C.

The directors of this Company have acquired an exclusive mining grant from the Norwegian Government of upwards of 56,000 acres, immediately contiguous to, and formerly an integral part of, the Royal Kongsberg Silver Mines, so successfully worked by the Government, at an average profit from two mines only (as appears from the annexed extract of the official returns for the last twenty-five years) of £44 200 per annum. The Anna Sophia District, ceded to this Company, embraces upwards of thirty mines proved to contain Silver, upon which the working may be resumed at a small outlay, with every prospect of immediate and profitable results.

Prospectuses and a pamphlet, embodying the reports of the Government Inspectors of Norway, and of Mr J. H. Clement, F.G.S., &c., &c., who surveyed and inspected the property for this Company, may be had on application to the Secretary at the offices.

Applications for Shares in the usual form must be accompanied with a deposit of 5s paid to the Company's Bankers, or forwarded by post-office order to the Secretary, who will return Bankers' receipt for the same.

GEORGE SEARBY, Secretary.

35 Moorgate street, E.C., Feb. 11, 1860.

THE BUDGET—ITS VALUE AND ITS PRICE.

Most cautious men of business will have been at first startled by Mr Gladstone's proposal to take off 4,000,000*l* of indirect taxes at the time that the estimates for the military, naval, and other services of the State were increased by 3,000 000*l*. They will not have been reassured by looking at the mode in which he purposes to provide for the expenditure of the coming year. They will have found that very considerable credit is taken for an increased consumption which must be hypothetical,—for the yield of taxes of which the very existence is problematical,—and for savings in departmental expenditure which have not yet been made. They will see that a considerable loan is to be called in to eke out the ways and means of the year. They will have feared that we shall have to bear an amount of direct taxation which the country has never yet borne in time of peace, and which it will be difficult to make it endure. Such are the difficulties which must occur at once to the mind of one who is accustomed to watch the national finances narrowly year by year; but a most careful examination of the Budget has convinced us that it contains excellences which more than counterbalance these risks, very considerable as they undoubtedly are. Let us shortly enumerate the benefits which Mr Gladstone offers to us.

In the first place, we have the almost entire removal of protective duties. The most important of these were, as we all know, abolished several years since; but a considerable number of other important ones yet remain, contrary to all principle, and waiting as it were till they find the hand that would take the trouble to destroy them. In the timber trade, in the glove trade, the trade in silk and ribbons, and in many others, very important vestiges are yet to be found of the once universal system of protection to the British manufacturer, and, consequently, of loss to the British consumer. These are now, with the most insignificant exception, to be abolished.

Secondly, we have now offered to us that which we have so often recommended—the simplification of our tariff. We have often shown how few are the commodities by which our Customs revenue is really raised, and how absurdly insignificant the gain to the revenue of many of the articles now subject to duty in fact is. Since the time of Sir Robert Peel there has undoubtedly been great improvement in this respect. But even in last year's accounts there are such items as these:—

	£	s	d
Hats or bonnets of straw, yielding	882	11	10
Opera glasses, and all marine and race glasses, not being telescopes	2,609	6	6
Toys	4,158	15	11

All such nonsensical items are now to be abolished, and the number of articles subject to Customs duties is to be reduced from 419 to 48. It is true that there are very many of the articles from which duty is now removed which may not seem very important, but we must be careful how we decide on the importance of various articles. Without experience, no one would have guessed that innumerable articles which we know to be essential to manufacturing industry would really be so. When things are made common, uses are found for them which were not dreamt of when they were uncommon. We must not hastily assume that the cheapening any article will be unimportant to trade. We may be quite certain that, if we cheapen a great number of articles, some one or other of them will turn out to be very important to it. In the list of articles from which it is now proposed to remove the duty, some, as in the case of currants, will be of considerable importance to the consumer.

This part of the subject brings us to a consideration which Mr Gladstone brought fully to view, but which has not ordinarily been enough attended to. It is in actual practice very difficult to say what are protective duties and what are not. England enjoys an advantage as to Customs revenue which is hardly possessed in a similiar degree by any other nation. She imports from tropical countries enormous quantities of some articles of general consumption for which she could not from her own soil raise a passable substitute or plausible imitation. All duties on these articles are of necessity revenue duties and nothing else. But when we once pass from the narrow circle of these commodities,—when we deal with articles which we cannot indeed produce, but for which we can provide inferior substitutes and imitations more or less like, we at once encounter a very formidable difficulty. Our Customs duty on the genuine article becomes a protection to the spurious one; our duty on the imported article is a protection to the home-made substitute. Port wine, for example, seems at first sight a commodity which could not be produced in England, but something which calls itself Port wine is produced here and is sold as such. No doubt in mere theory this might be met by a corresponding Excise duty; but in reality this is impossible. Excise duties are always most unpopular; and, in the complexity of our present manufacturing processes and in their changing nature, the producer, especially the unfair producer, has an immense advantage over the revenue officer. It is most advisable to confine our Customs duties to articles of which no semblance of an imitation can be produced in this country. In simplifying our tariff, we are often, therefore, rooting out protection when we do not know that we are doing so.

Thirdly, we have now offered to us the benefits of the French Commercial Treaty. As to the amount or exact nature of these benefits, nothing but experience can decide. The most plausible anticipations with respect to international commerce are apt to fail, and the most unlikely events come to pass. Still those who are best qualified to judge,—our manufacturers themselves,—seem to be confi-

dent that they shall be able to carry on a considerable trade with France. And we must remember that in this matter we are not dealing with France alone,—we are dealing to a certain extent with the whole Continent. The intellectual influence of France is immense almost everywhere, and whatever she does is nearly sure to be extensively copied elsewhere. If she were to adopt a thoroughly free-trade tariff, we might not unreasonably anticipate that free trade would become the prevailing fashion on the Continent. The extent, therefore, of the market which may in the end be opened to us is immense. We know that this prospect is a distant one, and that very many circumstances may happen which would prevent its being realised; yet still it exists, and cannot but be taken into the account. The Emperor of the French is certainly a Free-trader, if anything is certain about him; and there is no saying how far he may not act on his opinions if he is able and if he is helped.

It is not necessary to regard this Treaty as a reciprocity treaty at all. We may look at it not as a bargain for equivalents, but as a compact concerning items mutually advantageous. There is, indeed, considerable danger that the French, who are not generally very well educated in matters of political economy, may not look at it in this light. But Mr Gladstone announced very clearly that the English Government did not regard the Treaty as a mercantile bargain, but as a demolition of obstructions and an interchange of gifts; and after this clear explanation, France ought not to be disappointed if, from some hypothetical calculation of profit and loss, she hereafter conceives that she has the worse half of the transaction.

As to the benefit which the English consumer will directly derive from the abolition of the duty on French wine, a great deal must be left to experience. No one can tell before trial what the demand for French wines will be in England. It is proper to bear in mind, however, that on a former occasion when Mr Pitt reduced the duty on French wines, a considerable increase in their consumption took place. This appears by the following table:—

Period previous to Reduction.	Amount imported. gallons.	Period subsequent to Reduction.	Amount imported. gallons
1781	79,569	1787	969,856
1782	95,929	1788	731,227
1783	77,728	1789	646,334
1784	80,993	1790	652,590
1785	82,296	1791	644,000
1786	Returns destroyed.	1792	723,820

The fourth advantage which Mr Gladstone promises us is the repeal of the Excise duty on paper. On this head there is no occasion that we should say very much. The press of this country has long made known all the arguments in favour of a proposition which so materially affects their interests. One remark, however, we may make which is of some importance. Penny papers have become an institution. In many districts they anticipate the principal news, and in part supersede the perusal of the London daily papers. As their influence is likely to be great, it is of great importance that its tendency should be good. As there is a stiff competition, and as it will still be impossible to reduce the price below a penny, we may expect that the reader of these very influential journals will benefit by the reduction of the paper duty, and that the matter which they contain will be improved.

These four great benefits Mr Gladstone offers to us. What, then, is their price?

In the first place he proposes to lay on certain small new taxes of small amount, such as the following:—

Goods in packages or parcels ..... per package	1d
Goods in bulk, by weight ..... for every ton	1d
— — measure	1d
— — number ..... per 1,000	1d
Animals ..... per head	1d
On bills of sale, foreign and colonial produce, brokers' contract notes	1d
Stock warrants	3d
The license duty on eating houses, &c.	

Many of these imposts meet with great objections from the parties who will have to bear them; and we have not now the opportunity to discuss them at length, but we may fairly assume that some of them will pass, and that those of them which do pass will be those most easy to bear. These taxes, therefore, do not, we think, form a very important part of the price which we have to pay for the benefits of the present Budget.

The real price is the increase of the income tax. There can be no doubt that, if we adopt this Budget, we must pay a high income tax for a considerable period. There will be much difference of opinion as to how high the tax will have to be; but a high tax there must be; and the real danger of this is not seen commonly in its true light. Direct taxation is so painful that, when it has continued at a high rate for some years, people will do anything to be rid of it; and, when our representatives legislate under a painful pressure of this kind, their judgment is not to be trusted. They may be driven to courses which we now little anticipate. In the first place, they might reduce the expenditure of the country in such a manner as ultimately to cause a great increase of expense. We do not profess to believe that there is no room for economy in our expenditure. We believe that the country might get all that it now obtains for very much less than it now pays. We showed, on a recent occasion, how we think that this in some measure arises, but we should not like to see a violent reduction in our public expenditure caused by the mere painfulness of taxation. We should be sure, in our hurry, to save in the wrong place, and to continue to spend in the wrong place. A few years afterwards there would be an outcry such as there has lately been as to the insufficiency of our national defences. We should have to incur again the great outlay we are now incurring, and we should be as uncertain as we are now how much good we are to expect from our vast expense. The only mode by which we can hope to obtain more efficient services is by a steady and consistent regulation of our expenditure; and this we fear the torture, so to speak, of a very high income tax endangers.

Or, on the other hand, we fear that this same painful process might drive us even to resort to loans for the current expenses of the year. This may seem chimerical, but is it so? Suppose a Chancellor of the Exchequer under a very weak Government and with a very strong desire for popularity. Suppose, in a word, Mr Disraeli once more in the same position and the same mood as he was in when he reduced the income tax from 7d to 5d. Would he refuse to resort to loans? We doubt it. Borrowing is a very easy and a very pleasant process. He would throw the blame on Mr Gladstone; he would say, 'If I had still at my disposal 'the duties which you took off in 1860, I should not want 'to resort to any loan. Is the industrious taxpayer of the 'country to be ground down merely to carry out the im-'provident plans of an extinct Government?' We are not at all sure that a Chancellor of the Exchequer such as we have imagined would not use such language as this; and we are sure that if he did make use of it the Opposition would be very nearly powerless. Whatever else a party out of power may do, we do not believe they could ever maintain an income tax which the Government of the day proposed to remove, or obtain office by promising that they would themselves continue it.

We, therefore, think that we have to pay a most serious price for the benefits which Mr Gladstone offers to us. We think it is of the utmost importance that the country should plainly understand the price of the good which is now offered it. It will be a great strain on the moral fortitude of the country, and on that very account it should *from the first* be looked steadily and fully in the face. We know it will be said that much of the expense we have lately incurred is of a casual and temporary nature; but then we must consider that in the widely-ramified relations of a great country like this there will always be casualties. We may hope and wish for reductions of expenditure, but we should not *count* upon them. We should brace our minds to bear whatever income tax may be necessary to provide for Mr Gladstone's benefits. If we do this, they are safe; but if not, they are not safe.

LORD JOHN RUSSELL AS A FOREIGN MINISTER.

The authoritative information which we received yesterday, that the Emperor of the French is willing to be guided by the wish of the other European Powers, with regard to Savoy,—is at once another evidence of the singular care with which that remarkable man avoids his uncle's error of despising the public opinion of Europe, and another testimony to the influence which the opinion of the English Government, firmly and consistently expressed, retains on the Continent, even when the physical power of England does not back her representations. Lord John Russell's administration at the Foreign Office has been one continued course of

success. And the more we read of his despatches to other Powers, the better we understand the secret of this success. Those who have any distinct remembrance of that celebrated "secret correspondence" with Russia relating to the affairs of Turkey, in 1853, in which Sir Hamilton Seymour played so conspicuous a part, will remember that Lord John Russell's despatches were remarkable for a simplicity and a vigour which did not characterise all the English despatches in that correspondence. Had he continued at the Foreign Office instead of suddenly leaving it at that time, we can have but litte doubt that Russia might have been undeceived as to the views of England with regard to Turkey, and would not have been led into the false assumption that England would look on passively while Russia annexed large portions of the Ottoman Empire.

The same qualities of vigour, simplicity, consistency, and high principle which marked those despatches, mark the despatches of Lord John Russell in the Italian correspondence which has just been laid before Parliament. Moreover, there is, together with these qualities, that dignity and reticence in which Lord Malmesbury's correspondence was so strikingly deficient. When Lord John Russell wishes to mark out the view and policy of England, he does so with the utmost frankness; he gives a straightforward exposition of our national convictions. But he does not make useless overtures and renew them with purposeless importunity. Where, as between Austria and England, there is no hope of a reconciliation of views, Lord John Russell wisely contents himself with stating forcibly and without argument the view of the British Administration, and leaving it to exert its natural weight,—that which attaches to all decisive convictions of so great a nation, and that alone.

The history of the Italian negotiations shows that Lord John Russell, by the steady reiteration of English principles, has not a little contributed to the gradual amelioration of the dark prospects for Italy which seemed her only possible future after the conclusion of the convention of Villafranca. We do not, of course, mean to claim for English influence any *paramount* influence in determining that course of events. Had Italy been less firm and less temperate, England could have done nothing for her. Had England completely betrayed her trust, and acted with that complete indifferentism and even hostility to Sardinia which Lord Normanby desires to see, we do not feel sure that even then the hour of Italian freedom could have been very long delayed. But we do feel tolerably sure that, but for the resolute opposition of England to the patronising plans of France, the Emperor would have succeeded in carrying out some part of the policy he adopted at Villafranca,—in persuading Sardinia probably to refuse definitively the sovereignty offered her,—in convincing Victor Emmanuel, that with Austria and France united against him he must surrender all hope of fulfilling the wishes of the Italian people. It is easy to see that the Sardinian Government was on the verge of this disheartenment even as it was;—and, but for the hearty sympathy of England and the manifest support,—and not obscurely intimated advice,—of our Foreign Secretary, we strongly believe that it would have adopted this course. Had it done so, the blow to Italian hopes must have been severe. Sardinia alone is the centre of constitutional order in Italy. And had Tuscany and the Romagna been, as it were, cast adrift, and obliged to provide for themselves,—apart from the danger of any attack from Austria, they could scarcely have kept clear of the dangers of Mazziniism and revolutionary fanaticism.

Lord John Russell's use of his power as English Foreign Secretary has, we believe, in great measure saved Italy from this danger. His first despatches, both to France and Austria after the conclusion of the Convention of Villafranca, point out most ably the untenable ground adopted in that Convention,—and the dislike England would feel to any such measures as would be needful to carry it into effect. In subsequent despatches he brings home to Austria the strict consistency of England in maintaining the principle of non-intervention, by the whole history of her policy during the last forty years. To France he exposes, in the most masterly way, the absurdity of the federal scheme for Italy,—sets forth the advantage of leaving the Duchies to their own choice,—and the groundlessness of any expectation that Austria would make sacrifices in Venetia. To Tuscany he urges the importance of having an immediate expression of free popular feeling. To Sardinia he advances arguments in favour of prudence and moderation,—while at the last critical moment he does not shrink from intimating that Victor Emmanuel's provisional acceptance of the offered rule, might be the wisest solution of the complications. Even with Russia it is obvious that his despatches had much influence,—and Prussia, though too cautious to speak out, seems inclined to lean to the English rather than to the Austrian side.

On the whole, these despatches are in the highest degree creditable to the British Government. They prove beyond a doubt that the Emperor of France did distinctly contemplate the possibility of forcible Austrian intervention in the Duchies at the time of the treaty of Villafranca, and was not even prepared entirely to disavow all thoughts of forcible French intervention, if it should prove necessary. England has kept up a constant pressure in favour of the Italian cause, which at last bids fair to be crowned with success. We owe much to Lord John Russell for his part in bringing about this issue.

THE NAVY ESTIMATES.

The speeches of Monday last, taken in connection with the document on which they were comments, are by no means calculated to display the auditing powers of a miscellaneous representative assembly in a very imposing light. Lord Clarence Paget's able speech is, indeed, an express confession that the Admiralty have not at present at their command even the means of judging how far the money they ask from the country is really expended, with anything approaching to accuracy, on the purposes for which they ask it. And Lord Clarence Paget shifts most of the blame of this neglect on to the shoulders of the House of Commons, for the uninquiring apathy with which they have continued to vote the item the most important in magnitude, save one, of all in the list of naval votes, and which alone absorbs this year exactly the fourth part of the enormous vote of 12,800,000*l* for this service.

Before touching further, however, on this subject, we may remark that it is a matter for congratulation that we have at last some reliable estimate of the relative importance of the Steam Navies of the only three European countries whose navies are of really considerable magnitude. Till this year we knew that we were paying away vast sums, but we did not know, and could scarcely even conjecture, with what result as regards the safety of our shores these sums were paid away. We have now at last some faint dawning of intelligence on this subject. We know now nearly as much about the relative magnitude of our Navy and other Navies as we do about the relation between our expenditure and its results. The following will be found to be a condensed statement of Lord Clarence Paget's information concerning the effective strength of the French, Russian, and English Steam Navies:—

STEAM NAVIES OF FRANCE, ENGLAND, AND RUSSIA.

	France.		Russia.		England.
	Complete.	Building.	Complete.	Building.	In Commission.
Ships of the Line	32	5	9	9	28
Frigates	34	13	18	3	45
Iron-cased Ships	...	5	...	...	...
Corvettes	17	2	10	11	...
Gunboats	39	29	112	25	94
Floating Batteries	5	4	...	...	...
Transports	31	...	8	...	...
Avisos	86	3	30	small vessels.	80 guard & coast-grd. stm. ships
	244	61	187	48	247 in commission.

The number "in commission" in England is therefore not greater than the number "complete" in France alone; and, as Lord Clarence Paget explained, in calculating our real war resources, the number "complete" in France must be compared with the number "in commission" in England,—since in a few days, or at furthest a week or two, the system of the French Navy would enable France to man and fit out for service all her ships now completed, while England could only do the same by the number *in commission*;—since the difficulty of finding and training crews would postpone for at least some months the efficient equipment of those ships "afloat" which are not yet in commission. We may add that the building programme for the next financial year is to add to the strength of the Navy before the end of March, 1861, 10 line-of-battle ships, 12 frigates, 4 iron-cased ships, 4 corvettes, 15 sloops, and 23 gunboats;—an increase of ships which strikes us as somewhat disproportionate to the probable increase of the resources for manning them, unless the

scheme of the Naval Reserve turn out better than the Secretary to the Admiralty can at present lead us to expect.

And now as to the more immediate subject of our remarks, the *cost* of these active efforts in the Admiralty. It is distributed into seventeen votes, of which two alone (No. 1 and No. 10) make up more than half the whole, and of which four items (Nos. 1, 2, 10, 17) show an increase which is more than the total increase of expenditure over the last year,—the increase in these items, which is 1,245,532*l*, being balanced by some decrease in other items of expenditure. The principal items of increased expenditure are as follows:—

	1859-60.	1860-61.	Increase.
	£	£	£
No. 1.—Wages to officers, seamen, marines	3,066,757	3,476,757	410,000
No. 2.—Victuals for do. do.	1,242,859	1,458,087	215,228
No. 10.—Materials for building, repair, and outfit of fleet	2,817,130	3,204,434	387,304
No. 17.—Transport of stores and troops	245,000	478,000	233,000
Total of four items	7,371,746	8,617,278	1,245,532

The increase of the first and second votes is caused by the increase of men in the naval service, and the increase, accordingly, is in something like the same proportion in these first two votes.

But on the large increase in vote 10, for repairing and building new ships, Lord Clarence Paget has to make the confession to which we alluded in commencing our remarks,—that he knows not whence it is, or whither it goes. His remarks are so striking in their illustration of the inefficiency of public assemblies in checking expenditure, and so sound in relation to the best palliative for the disease,—the best *remedy* it can, we fear, scarcely be called,—in frank and full publicity, that we cannot but extract them. "The items are large," he says, "and the information "small. I should have liked to lay this vote on the table "very much in the same form as vote 11 for public works; "but the Admiralty laboured under great difficulties with "regard to it. I am very unwilling to impute blame to any "one, but if I am to impute blame to any one, it "would be to the House of Commons, who have never "really asked for any detailed information with regard to "this great vote No. 10. I am naturally told when I ask "for information, 'How can we give an estimate for a future "'year, when we really don't know what proportion of money "'we have expended during the past year on building, or on "'repairing, or on what particular ships it has been "'expended.' The Board of Admiralty called on the "Accountant-General to give a return, which I very "much wish was now on the table of the House, "of the cost of ships during the past year. That "return, which is of a very interesting character, gives the "name and the cost of every ship in the Navy under six dif-"ferent heads,—namely, ships building, converting from "sail to screw, maintenance of ships in commission, of the "steam reserve, of old sailing ships in ordinary, and of the "dockyard guard. The timber, beams, and other stores re-"quired for these different purposes are likewise shown. I "do not say that the return is perfect because it is a novelty; "it has hitherto existed in the dockyard, but it has never "yet practically been turned to account, and the items con-"sequently have not been properly charged: in fact, it may "be said that its present value is *nil* as compared with what "it will be in future years.....In all matters of account "there is nothing like publicity, and I am persuaded that "the great and immediate effect of this comparative view of "the cost of ships will be a direct tendency to economy in "the general establishments."

This statement and Lord Clarence Paget's former speeches on the same theme do credit to his candour, and give us hope for the future. But what can throw a more striking light on the principles of House of Commons economy? Mr Bright has complained bitterly of these estimates for years, and has zealously assured all his audiences, as he did his Manchester audience on Tuesday last, that there was no remedy for such expenditure except in his own scheme of democratic innovation,—that is, in substituting for the representatives of the middle classes representatives of the working classes in all the large constituencies. It has never occurred to him that the remedy for a great and vague expense was to inquire into its details. If a man wants to contract his expenditure, says Lord C. Paget, he gets in his bills. Her Majesty's Admiralty are in the same position; they are beginning to wish to know how and what they have been spending. But to incite them to this wise preliminary process seems to Mr Bright not worth his while. He thinks that when he has doubled or trebled the constituencies, the representatives will do this of their own accord, and, till then, will only make a show of doing it. We fear he is very greatly mistaken, and that it will be found under the doubly reformed, as under the once reformed Parliament, that it is the sense of personal responsibility and duty which is alone adequate to produce anything like a consistent and diligent policy of economy,—and that when this responsibility is divided among 650 gentlemen, it will always be weak, whether the constituencies be as large as the Tower Hamlets or as small as those of Calne and Harwich.

THE MANNING OF THE NAVY.

Neither the Army nor the Navy, as we showed at length last week, can now be recruited to any large extent except by competing with other claims, draining other sources, robbing other trades and professions. The Navy, more especially, can only obtain the supply of seamen it requires from two sources: it must bring up boys to the service, or it must rob the mercantile marine. Now the importance of the first of these resources has been recognised for many years, and, we are glad to say, increasingly so. But for any sudden supply of sailors to the Royal Navy, our Captains and Admiralty authorities still trust to the merchant service, whose seamen they hope to tempt away, when needed, by some means or other. In this expectation they appear to us both to be leaning on a broken reed and trusting to an illegitimate resource. The supply from this quarter must always, we hold, be uncertain, scanty in amount, defective in quality, extravagant in cost, and undesirably if not unwarrantably obtained.

It must be uncertain, because it must always depend upon the relative amounts of inducement which the respective services can offer to the seamen whom they wish to tempt; and, as a rule, the shipowner can bid higher than the Queen. If trade is prosperous, if mercantile enterprise is unfettered and undeterred, and if the demand for articles of exchange at home and abroad be as brisk as every patriotic Englishman must wish perpetually to see it, the goods *must* be shipped or imported, merchants must and will pay whatever rates of freight shipowners may be enabled to demand, and these rates will leave profits ample enough to cover any wages which are found necessary to secure a full crew. No mere bounty, no advance of pay which the Admiralty would like to propose or Parliament to vote to 70,000 seamen, no prospect of prize-money (which, indeed, can now, under the new maritime law, scarcely be held out as an inducement) will compete with the offers which the shipowners will be able to make. In periods of great demand for freight, these gentlemen sometimes have been known to clear the entire value of their vessel in two voyages or even in one. What signifies to them one or two hundred pounds additional distributed among their crews? If, indeed, the outbreak or the prospect of a war should paralyse commerce and frighten our shipowners into inactivity or our merchants into shipping everything in neutral bottoms—as is probable enough—then, indeed, there might be a glut of sailors in our ports, and Her Majesty might buy them cheap. But this is a contingency which no one can contemplate without alarm;—and it may be laid down as a rule that, except under very extraordinary and disastrous circumstances, the shipowner can always afford the merchant seamen higher wages to remain than the Queen can offer him to desert.

For similar reasons, not only will the supply of merchantmen to the Royal Navy be scanty and insufficient in amount, but the quality will be defective also. The best men will not go. Only those whom the shipowner is not anxious to keep will leave him for the Admiralty service. This has been found so on a late occasion: the bounty offered last Spring brought in men very slowly; and of those who did come, only a small proportion were able-bodied seamen, or in any way desirable acquisitions. That this is natural, and must ever be the case, may be shown by another consideration, which has not received the attention it deserves; and which, moreover, goes far to explain why the formation of the Naval Reserve—an excellent measure in itself—has proceeded so much more slowly than was hoped. It is simply unreasonable and absurd to expect that good men, desirable

hands, and really well-trained and serviceable seamen, *should* leave the merchant service to enter the Royal Navy—or should even promise, for the sake of a small annual stipend, to do so when called upon. For, the mode of proceeding, the sort of discipline, the relation of men to their officers,—nay, even the very mode of handling the ropes, and much of the technical nomenclature also, we believe, are so entirely different in the two services, as *virtually to constitute two distinct professions.* What is it, therefore, that the Admiralty asks from the men whom they endeavour to bribe away from the mercantile marine either as immediate effectives or as reserves? Neither more nor less than this:—that they—grown men, masters of their business, and possessors of capacity and character in their own line—shall in middle life come into a new line of occupation, go to school among boys and strangers, and begin at 30 years of age to learn their work over again! And they ask them to do all this—in the case of ordinary seamen, for the sake of a bounty of 10*l*, which can be no equivalent for stricter discipline and lower wages;—and in the case of the Naval Reserve, for a retaining fee of 6*l* or 8*l* a year, clogged with the condition (which must deprive it of almost all the character of a boon) of abstaining from entering for long voyages. Is this reasonable? or likely to be attended with very signal success?

Lastly, a system of which the recognised practice is to discharge experienced and trained crews as soon as they arrive in port, and collect them together again a year or two after, as emergencies arise, with relaxed discipline, demoralised habits, and composed for the most part of inferior men, tempted in or tempted back by a fresh bounty at each enlistment, may surely be called a costly and a wasteful one. And against the *habit* of *calculating* on manning the Navy by crippling the merchant service—of robbing one department of enterprise and action to feed another—of injuring the great producers of national wealth at the very moment when that wealth is about to be most heavily burdened,—we must ever protest, in the strongest language, as an unjust, short-sighted, and silly policy. It may be right enough, when sudden and tremendous emergencies *have* arisen, that every branch of industry, as well as every individual citizen, should have its interests postponed and, if need be, its resources drained, rather than the country should be imperilled or destroyed. But to persist in a course of policy which *deliberately and habitually contemplates* this wasteful and wicked robbery, and refuses to make such a timely and regular provision as would render the injustice unnecessary, appears to us, we confess, as astonishing as it is unwarrantable.

There is, indeed, one mode of forming an active and efficient Naval Reserve, which, we venture to think, the authorities might do well to consider. There is no reason why seamen *trained in the Royal Navy,* should not, at the age (say) of 35 years, be permitted to enter the merchant service, where their character and education would secure them a high place, and into which the higher wages of that service might allure them,—on condition of returning to the Queen's service on three or six months' notice;—and still drawing, as a retaining fee, such portion of their usual annual stipend (say 10*l*), as, added to the extra 12*l* or 15*l* which they would earn in their new occupation, would enable them to make some provision for their family—a thing which sailors now can seldom manage. Sufficient numbers might always be secured for this Reserved Force, if Parliament were to enact that not more than one-fifth or one-sixth of the men annually voted should be above the age of 35, but that those thus compelled to leave the Navy might at once enter the Reserve, with the advantages thereto attached. We do not attempt to work out the details of this plan; but we think the suggestion deserves a careful consideration. A Reserved Force, formed on this plan, would have the great advantage of consisting entirely of thoroughly-trained and experienced seamen, to whom the discipline and habits of the Royal Navy would be familiar.

THE BOARD OF TRADE TABLES FOR 1859.

The Board of Trade Tables for the year 1859, and for the last month in it (December), have at length appeared. They show exports to the amount of 130,440,427*l*,—the largest amount ever yet reached by our export trade. In 1858 the exports were valued at 116,608,756*l*; and in 1857, the year of largest export previously known, at 122,066,107*l*. Indeed but for the great falling off in the export trade during the months of November and December, 1857, in consequence of the commercial crisis, the exports would even then have reached very near the value at which they are given in the present year. The declared value for the month of December, 1859, is 10,827,242*l*, as against 10,058,769*l* in 1858; and 7,148,041*l* in 1857.

That the increase of last year on 1857 is due almost entirely to the Indian trade, will be seen at once when we show the relative items in the increase:—

Exports.	1857. £	1858. £	1859. £
To foreign countries	84,910,893	76,386,299	84,315,381
To colonies exclusive of British India	25,488,500	23,440,071	26,292,347
To British India	11,666,714	16,782,386	19,832,699
	122,066,107	116,608,756	130,440,427

Hence it appears that the whole eight millions worth of goods by which the British export trade has increased since 1857, may be said to have been sent to British India,—the slight decrease in 1859, as compared with 1857, in the foreign trade, being compensated by a nearly equally slight increase in the colonial trade, so that but for the increase to British India, we should have now recovered, and no more than recovered, the prosperity of 1857. Our trade to the United States of America is that which exhibits the variations next in importance. As the months of November and December, 1857, were months of such extreme depression in the American trade as to affect in a very important way the total of the whole year, we will go back in our return to the year 1856, in order to exhibit the true course of our trade thither:—

Exports to United States and California.

1856. £	1857. £	1858. £	1859. £
21,918,105	18,985,939	14,510,616	22,611,283

Hence it appears that we have more than recovered the prosperity of 1856 in the American trade, and that the exports are not far short of those of 1853.

Next to the American trade, the Chinese shows the largest increase. The largest amount which our exports to China (exclusive of Hong Kong) had ever before reached was 1,918,244*l* in 1852, and of late years it had not exceeded 1,730,782*l*. But in 1859 we exported thither,—in consequence, no doubt, of the promise held out by Lord Elgin's treaty,—goods to the declared value of 2,526,036*l*, and separately to Hong Kong, goods to the value of 1,931,595*l*. The Russian trade is also considerably on the increase. To the Northern Russian ports it has reached 3,493,016*l*, which is 600,000*l* more than in any previous year.

In other directions our exports had on the whole fallen off in 1859, as compared with former years: to Holland, to Belgium, to France, to Hanover, to Prussia, there has been no recovery of the trade of 1857. To Egypt and Turkey there is some increase.

With regard to the imports, the quantity of raw cotton imported in the year shows a large increase on that of any previous year, an increase of near 20 per cent. on 1858. The imports of corn and coffee are considerable, though hardly so large as those of last year; those of tea are considerably increased. The returns of the estimated *value* of the imports for the year 1859 will not be given till next month.

THE PENNY TAXES AND THE BONDING CHARGES AND THEIR EFFECT ON TRADE.

[COMMUNICATED.]

Mr Gladstone's financial propositions introduce a new phase in taxation. He follows the example of the late Sir Robert Peel in scattering to the winds large amounts of revenue derived from articles assumed to be of prime necessity; but from this point Mr Gladstone takes his own line of departure. He relinquishes duties yielding considerable revenue, proposing to obtain compensation by the imposition of numerous small imposts, which he classes under the generic term of "penny charges." The wisdom or the propriety of the reductions proposed by Mr Gladstone is not so likely to attract attention as the mode by which he proposes to replenish the Exchequer after these sacrifices.

The principle of penny charges was established and popularised by the penny postage, which has found admirers and imitators throughout the civilised world; but in this a dis-

tinct and special service was rendered to each individual who paid the tax, and the full equivalent of money's worth was given for every penny so paid. Then followed the penny receipt stamp; and this was also said to have rendered money's worth, in relieving the settlement of all transactions from the serious complications of the old stamp regulations. More recently, Mr Disraeli introduced a stamp of one penny upon bankers' cheques, in which it would be difficult to find any compensating value for payment of the impost; but, as the sum was small in amount, and had mainly application to those wealthier classes of the community that kept banking accounts, it was allowed to pass, with some murmuring, but without any strong definite opposition. Upon these precedents, Mr Gladstone creates a series of propositions, which, if realised, will undoubtedly, for the time, open up very considerable sources of revenue, and may possibly not be altogether unpopular in the assembly to which they are propounded. as pressing exclusively upon the commercial and manufacturing interests of the country.

Following the resolutions, as laid upon the table of the House of Commons, to their legitimate consequences, it will be found—

1. That all contracts which affect the buying and selling of *any* wares or merchandise, or *any memoranda* made in regard thereof, will be liable to a penny stamp.

2. That all warrants or symbols of goods, or any document which entitles the holder or bearer to the delivery of goods lying in *any warehouse,* whether bonded or private stores, shall be liable to a charge of *three* pence.

3. Every note or memorandum by which any party is intitled to receive any sum of money is to bear a stamp of one penny.

4. All engagements to pay, or intimation of intended payment at any future day, to bear a tax of sixpence.

5. A tax of one penny per package upon merchandise imported and exported. The average range of sterling value of the contents of these packages is from half-a-crown to one hundred pounds: the tax is proposed to be the same in every case.

And with this may be concluded the list of what Mr Gladstone terms his "penny charges." But the novelties do not end here.

If any intelligent mercantile man were asked by what portion of our fiscal regulations, as affecting commerce, the revenue and trade had mutually derived the largest advantage, he would immediately point to the bonding system, by which Government has arranged to place goods liable to duty within the immediate reach of the payers of duty, with perfect security to the revenue, and without cost to the payee. This principle of leaving the monies required for duty until the actual need of the goods by the traders, has been found to operate most beneficially upon the revenue, in the economy of capital, the extension and diffusion of wholesale business by establishing bonded warehouses in most of the principal ports and towns of the United Kingdom: hence the recognised principle that commercial facilities are as beneficial to the revenue as to the trader, has become a canon of our fiscal legislation.

But all this, if not suddenly reversed, is likely to be seriously affected and injured by Mr Gladstone's propositions as contained in Nos. 12 and 13 of the resolutions; whereby he proposes to impose new and heavy taxes upon every package of goods brought under the arrangement of the inland bonding system. These new charges are alike onerous and uncertain,—for in an official letter* lately published, Mr Gladstone admits that he has thrown the net as wide as possible, in order that he may have the merit of conceding in cases of extreme pressure or hardship.

The mercantile objections will be found to be quite as strong against the principle as against the details of these official costly interferences. The only satisfactory solution is the withdrawal of these two resolutions. If they become law, the duty payments will, as formerly, be centralised at the ports of import, and the taxes, with all the annoyances consequent upon the necessity of having to be under the inert and obstructive management of the Customs, be thus avoided; but the free policy in regard to unfettering the inland commerce of the country will have been reversed, the revenue scarcely increased, and trade sorely injured.

* This letter will be found in another column.—[Ed. Econ.]

THE BUDGET.

The following letter has been addressed by the Chancellor of the Exchequer to Mr Glyn, M.P.:—

"Downing Street, Feb. 16, 1860.

"My dear Mr Glyn,—I think the suggestion which you have conveyed to me that contract notes, like receipts under 40s, should be exempt from stamp is a very good one; and it likewise seems clear that the law should be so altered as to permit the transactions which are known as time-bargains.

"I will avail myself of this opportunity to mention certain points chiefly, though not exclusively, with respect to such of the resolutions now before the House of Commons as impose what I may call collectively, for convenience, the new penny charges.

"1. These resolutions differ broadly from those which relate to the imposition or removal of Customs duty, with respect to the time when they take effect. For immediate practical purposes, the latter have the force of law when the resolution itself has been adopted. The former will have no effect whatever until bills shall have been brought in, shall have passed through all their stages, and shall have received the Royal assent. Indeed, as most of these charges will be laid in the form of stamp duties, a further interval for the preparation of the stamps, and for various executory arrangements, will in general be required. Even the preliminary arrangements themselves cannot be proposed until the greater questions of Customs and Excise shall have been submitted to the judgment of the House of Commons. In this part, therefore, of the subject, there is ample time for the consideration of details.

"2. It is likewise important to recollect that from their nature, all those resolutions which contemplate increased or new charges cannot in general fully explain the measures of which they are to be the basis. The salutary rules of the House of Commons require that for the greater security of the subject all new taxes shall first be submitted, not in the shape of bills, which admit of clear and full detail, but in the shape of resolutions which are intended to state the general outline only. Unless this be borne in mind such resolutions must of necessity create uneasiness, as they cannot set forth the exemptions or the modifications with which the application of the general principle is usually accompanied. The place for the consideration of all these is the subsequent committee on the bill. It is, on the other hand, necessary that the resolutions should be drawn so largely as to include everything which might come within their range; for by the rules of Parliament, as you well know, a charge may be limited, but cannot be increased or extended in the discussions on the bill.

"3.—I have no doubt that in the adjustment of these penny and minor charges we shall find many details requiring consideration. At the present moment the course most favourable to the progress of public business would be that those gentlemen who are immediately concerned should, if they think fit, make known to me, in writing, the modifications which they may think most necessary, and should set forth whatever they may think the extreme cases in which the application of the general rule would be productive of inconvenience to trade. I should thus be enabled to bring together the results of much general experience, and should be prepared to enter advantageously into personal examinations a little later.

"4. With respect, however, to one or two of the measures, I may mention the general rule by which the Government intend to be guided.

"(a) As regards the registration due of one penny upon imports and exports, I compute that its average amount will be about 1s 10d upon the hundred pounds, while it will be levied off the ships' papers. In particular cases it will be lower, and in some others higher; but, speaking generally, I should regard ¼ per cent. as the maximum, and I do not think it can be found necessary for the purposes of simplicity of adjustment in any case to carry it so far as to make it equal to ½ per cent. I anticipate from it a material improvement in the statistics of our external trade. In fixing the details of the charge, we shall have to consider the number and complication of the entries, as well as the values of the goods.

"(b) In the charges upon certain operations performed with respect to goods in warehouses, the Government stand upon a twofold principle, just, I think, in both its parts. The first is, that the very heavy cost of the warehousing system to the nation, as it is connected with certain operations, especially upon wines and spirits, may be equitably reviewed, and moderate charges imposed upon such operations in relief of the department against the cost to which it is put. The second is, that by means of a charge on removals we propose to lay the ground for a system of inland bonding on principles which will be fair and equal as between inland towns and ports which have the privilege of warehousing with respect to articles that they do not import. As to the particular rates to be fixed, I think that they will require to be carefully considered in detail.

"(c) As respects the proposed charge upon contract notes and dock warrants, we shall have to consider carefully the definition proper for the first with respect to the ordinary course of trade; and as respects the latter, I have no hesitation in saying that if we find the charge of threepence likely to amount in a large

number of instances to a serious burden, we shall not hesitate to reduce it.

"5. Leaving the subject of the new or penny charges, I subjoin information which I ought, but for the pressure of other matter, to have conveyed on Friday night, with respect to certain articles subject to Excise at home, which are to be imported from abroad on altered terms. The proposed changes will take effect for the foreign article only at the time when the duty on the domestic production is reduced or removed. The duties of Customs will not be removed from articles of paper until the 1st of July, and the duty on foreign hops will not be reduced to 14s until the 1st of January.

"6. Lastly. With respect to desires which have been expressed in various quarters for further changes in the French Customs laws, over and above those which are comprehended in the treaty. These cannot, I apprehend, be made the subject of any communications which can affect the course of Parliament with regard to the treaty itself. But, inasmuch as the Government have proposed to Parliament various measures favourable to French commerce, in addition to those which the treaty contains, they will, if those measures shall be adopted by Parliament, feel no difficulty whatever in making representations to the French Government in support of any demand which may appear in itself to be reasonable, so far at least as to recommend it to favourable consideration.—I remain, Sir, your's sincerely,

"G. C. Glyn, Esq., M.P. "W. E. GLADSTONE."

THE COMMERCIAL TREATY.

THE following is the Treaty of Commerce between Her Majesty and the Emperor of the French, signed at Paris, January 23, 1860, and the ratifications of which were exchanged at Paris, February 4, 1860:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland and His Majesty the Emperor of the French, being equally animated with the desire to draw closer the ties of friendship which unite their two people, and wishing to improve and extend the relations of commerce between their respective dominions, have resolved to conclude a treaty for that purpose, and have named as their Plenipotentiaries, that is to say:

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, the Most Hon. Henry Richard Charles Earl Cowley, Viscount Dangan, Baron Cowley, a Peer of the United Kingdom, a Member of Her Britannic Majesty's Privy Council, Knight Grand Cross of the Most Hon. Order of the Bath, Her Majesty's Ambassador Extraordinary and Plenipotentiary to the Emperor of the French; and Richard Cobden, Esq., a Member of the British Parliament;

His Majesty the Emperor of the French, M. Baroche, Grand Cross of the Imperial Order of the Legion of Honour, &c., a Member of his Privy Council, President of his Council of State, provisionally charged with the Department of Foreign Affairs; and M. Rouher, Grand Officer of the Imperial Order of the Legion of Honour, &c., Senator, his Minister and Secretary of State for the Department of Agriculture, Commerce, and Public Works:

Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:—

ARTICLE I.—His Majesty the Emperor of the French engages that on the following articles of British production and manufacture, imported from the United Kingdom into France, the duties shall in no case exceed 30 per cent. *ad valorem*, the two additional decimes included. The articles are as follows:—Refined sugar; turmeric in powder; rock crystal worked; iron forged in lumps or prisms: brass wire (copper alloyed with zinc), polished or unpolished of every description; chemical productions, enumerated or non-enumerated; extracts of dye-woods; garancine; common soap of every description, and perfumed soap; stoneware and earthenware, fine and common; china and porcelain ware; glass, crystal, mirrors, and plate glass; cotton yarn; worsted and woollen yarn of every description; yarns of flax and hemp; yarns of hair, enumerated or non-enumerated; cotton manufactures; horsehair manufactures, enumerated or non-enumerated; worsted and woollen manufactures, enumerated or non-enumerated; cloth list; manufactures of hair; silk manufactures; manufactures of waste and floss silk; manufactures of bark and all other vegetable fibres, enumerated or non-enumerated; manufactures of flax and hemp; mixed manufactures of every description; hosiery; haberdashery and small wares; manufactures of caoutchouc and gutta-percha, pure or mixed; articles of clothing, wholly or in part made up; prepared skins; articles of every sort manufactured from leather or skins, included or not under the denomination of small wares, fine or common; plated articles of every description; cutlery; metal wares, whether enumerated or not; pig and cast iron of every description, without distinction of weight; bar and wrought iron, with the exception of the kinds specified in Article XVII.; steel; machinery, tools, and mechanical instruments of every description; carriages on springs, lined and painted; cabinet ware, carved work, and turnery of every description; worked ivory and wood; brandies and spirits, including those not distilled from wine, cherries, molasses, or rice; ships and boats. With respect to refined sugar and chemical productions of which salt is the basis, the excise or inland duties shall be added to the amount of the above specified duties.

ARTICLE II.—His Imperial Majesty engages to reduce the import duties in France on British coal and coke to the amount of 15c for the hundred kilogrammes, with the addition of the two decimes. His Majesty the Emperor also engages, within four years from the date of the ratification of the present treaty, to establish upon the importation of coal and coke by land and by sea a uniform duty, which shall not exceed that which is fixed by the preceding paragraph.

ARTICLE III.—It is understood that the rates of duty mentioned in the preceding articles are independent of the differential duties in favour of French shipping, with which duties they shall not interfere.

ARTICLE IV.—The duties *ad valorem* stipulated in the present treaty shall be calculated on the value at the place of production or fabrication of the object imported, with the addition of the cost of transport, insurance, and commission neccessary for the importation into France as far as the port of discharge. For the levying of these duties the importer shall make a written declaration at the custom house, stating the value and description of the goods imported. If the custom house authorities shall be of opinion that the declared value is insufficient, they shall be at liberty to take the goods on paying to the importer the price declared, with an addition of 5 per cent. This payment, together with the restitution of any duty which may have been levied upon such goods, shall be made within the 15 days following the declaration.

ARTICLE V.—Her Britannic Majesty engages to recommend to Parliament to enable her to abolish the duties of importation on the following articles:—Sulphuric acid, and other mineral acids; agates and cornelians, set; lucifers of every description; percussion caps; arms of every description; jewels, set; toys; corks; brocade of gold and silver; embroideries and needlework of every description; brass and bronze manufactures, and bronzed metal; canes, walking canes or sticks, umbrella or parasol sticks, mounted, painted, or otherwise ornamented; hats, of whatever substance they may be made; gloves, stockings, socks, and other articles of cotton or linen, wholly or in part made up; leather manufactures; lace manufactured of cotton, wool, silk, or linen; manufactures of iron and steel; machinery and mechanical instruments, tools, and other instruments; cutlery and other articles of steel, iron, or cast iron; fancy ornaments of steel and iron; articles covered with copper by galvanic process; millinery and artificial flowers; raw fruits; gloves and other leather articles of clothing: manufactures of caoutchouc and gutta percha; oils; musical instruments; worsted and woollen shawls, plain, printed, or patterned; coverlids, woollen gloves, and other worsted and woollen manufactures not enumerated; handkerchiefs and other manufactures not enumerated, of linen and hemp; perfumery; cabinet ware, carved work, and turnery of every description; clocks, watches, and opera-glasses; manufactures of lead, enumerated or not enumerated; feathers, dressed or not; goat's and other hair manufactures; china and porcelain ware; stone and earthenware; grapes; sulphate of quinine; salts of morphine; manufactures of silk, or of silk mixed with any other materials, of whatever description they may be; articles not enumerated in the tariff, now paying an *ad valorem* duty of 10 per cent.—subject, however, to such measures of precaution as the protection of the public revenue may require, against the introduction of materials liable to custom or excise duties, in the composition of articles admitted duty free in virtue of the present paragraph.

ARTICLE VI.—Her Britannic Majesty engages also to propose to Parliament that the duties on the importation of French wine be at once reduced to a rate not exceeding 3s a gallon, and that from the 1st of April, 1861, the duties on importation shall be regulated as follows:—1. On wine containing less than 15 degrees of proof spirit verified by Sykes' hydrometer the duty shall not exceed 1s a gallon. 2. On wine containing from 15 to 26 degrees the duty shall not exceed 1s 6d a gallon. 3. On wine containing from 26 to 40 degrees the duty shall not exceed 2s a gallon. 4. On wine in bottles the duty shall not exceed 2s a gallon. 5. Wine shall not be imported at any other ports than those which shall be named for that purpose before the present treaty shall come into force, Her Britannic Majesty reserving to herself the right of substituting other ports for those which shall have been originally named, or of increasing the number of them. The duty fixed upon the importation of wine at ports other than those named shall be 2s a gallon. 6. Her Britannic Majesty reserves to herself the power, notwithstanding the provisions of this article, to fix the *maximum* amount of proof spirit which may be contained in liquor declared as wine, without, however, the *maximum* being lower than 37 degrees.

ARTICLE VII.—Her Britannic Majesty promises to recommend to Parliament to admit into the United Kingdom merchandise imported from France at a rate of duty equal to the excise duty which is or shall be imposed upon articles of the same description in the United Kingdom. At the same time the duty chargeable upon the importation of such merchandise may be augmented by such a sum as shall be equivalent for the expenses which the system of excise may entail upon the British producer.

ARTICLE VIII.—In accordance with the preceding article, Her Britannic Majesty undertakes to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France at a duty exactly equal to the excise duty levied upon home-made spirits, with the addition of a surtax of 2d a gallon, which will make the actual duty payable on French brandies and spirits 8s 2d the gallon. Her Britannic Majesty also undertakes to recommend to Parliament the admission of rum and tafia imported from the French colonies at the same duty which is or shall be levied on these same articles imported from the British colonies. Her Britannic Majesty undertakes to recommend to Parliament the admission of paper-hangings imported from France at a duty equal to the excise tax,—that is to say, at 14s per hundredweight; and cardboard of the same origin at a duty which shall not exceed 15s per hundredweight. Her Britannic Majesty further undertakes to recommend to Parliament the admission of gold and silver plate imported from France at a duty equal to the stamp or excise duty which is charged on British gold and silver plate.

ARTICLE IX.—It is understood between the two high contracting Powers that if one of them thinks it necessary to establish an excise tax or inland duty upon any article of home production or manufacture which is comprised among the preceding enumerated articles, the foreign imported article of the same description may be immediately liable to an equivalent duty on importation. It is equally understood between the high contracting Powers that, in case the British Govern-

ment should deem it necessary to increase the excise duties levied upon home-made spirits, the duties on the importation of wines may be modified in the following manner :—For every increase of 1s per gallon of spirits on the excise duty there may be on wines which pay 1s 6d duty an augmentation not exceeding 1½d per gallon; and on wines which pay 2s an augmentation not exceeding 2½d per gallon.

ARTICLE X.—The two high contracting parties reserve to themselves the power of levying upon all articles mentioned in the present treaty, or upon any other article, landing or shipping dues, in order to pay the expenses of all necessary establishments at the ports of importation and exportation. But in all that relates to local treatment, the dues and charges in the ports, basins, docks, roadsteads, harbours, and rivers of two countries, the privileges, favours, or advantages which are or shall be granted to national vessels generally, or to the goods imported or exported in them, shall be equally granted to the vessels of the other country, and to the goods imported or exported in them.

ARTICLE XI.—The two high contracting Powers engage not to prohibit the exportation of coal, and to levy no duty upon such exportation.

ARTICLE XII.—The subjects of one of the two high contracting Powers shall in the dominions of the other enjoy the same protection as native subjects in regard to the rights of property in trademarks and in patterns of every description.

ARTICLE XIII.—The *ad valorem* duties established within the limits fixed by the preceding articles shall be converted into specific duties by a supplementary convention, which shall be concluded before the 1st of July, 1860. The medium prices during the six months preceding the date of the present treaty shall be taken as the bases for this conversion. Duties shall, however, be levied in conformity with the bases above established:—1. In the event of this supplementary convention not having come into force before the expiration of the period fixed for the execution by France of the present treaty. 2. Upon those articles the specific duties on which shall not have been settled by common consent.

ARTICLE XIV.—The present treaty shall be binding for the United Kingdom of Great Britain and Ireland so soon as the necessary legislative sanction shall have been given by Parliament, with the reserve made in Article VI. respecting wines. Further, Her Britannic Majesty reserves to herself the power of retaining, upon special grounds, and by way of exception, during a period not exceeding two years, dating from the 1st of April, 1860, half of the duties on those articles, the free admission of which is stipulated by the present treaty. This reserve, however, does not apply to articles of silk manufacture.

ARTICLE XV.—The engagements contracted by His Majesty the Emperor of the French shall be fulfilled, and the tariffs previously indicated as payable on British goods and manufactures shall be applied within the following periods:—1. For coal and coke, from the 1st of July, 1860. 2. For bar and pig iron, and for steel of the kinds which are not subject to prohibition, from the 1st of October, 1860. 3. For worked metals, machines, tools, and mechanical instruments of all sorts, within a period which shall not exceed the 31st of December, 1860. 4. For yarns and manufactures in flax and hemp, from the 1st of June, 1861. 5. And for all other articles from the 1st of October, 1861.

ARTICLE XVI.—His Majesty the Emperor of the French engages that the *ad valorem* duties payable on the importation into France of merchandise of British production and manufacture, shall not exceed a *maximum* of 25 per cent. from the 1st October, 1864.

ARTICLE XVII.—It is understood between the two high contracting Powers, as an element of the conversion of the *ad valorem* duties into specific duties, that for the kinds of bar iron which are at present subjected on importation into France to a duty of 10f, not including the two additional decimes, the duty shall be 7f on every 100 kilogrammes until the 1st of October, 1864, and 6f from that period, including in both cases the two additional decimes.

ARTICLE XVIII.—The arrangements of the present Treaty of Commerce are applicable to Algeria, both for the exportation of her produce, and for the importation of British goods.

ARTICLE XIX.—Each of the two high contracting Powers engages to confer on the other any favour, privilege, or reduction in the tariff of duties of importation on the articles mentioned in the present Treaty, which the said Power may concede to any third Power. They further engage not to enforce one against the other, any prohibition of importation or exportation which shall not at the same time be applicable to all other nations.

ARTICLE XX.—The present Treaty shall not be valid unless Her Britannic Majesty shall be authorised by the assent of her Parliament to execute the engagements contracted by her in the articles of the present Treaty.

ARTICLE XXI.—The present treaty shall remain in force for the space of 10 years, to date from the day of the exchange of ratifications, and in case neither of the high contracting Powers shall have notified to the other, 12 months before the expiration of the said period of 10 years, the intention to put an end to its operation, the Treaty shall continue in force for another year, and so on from year to year until the expiration of a year, counting from the day on which one or other of the high contracting Powers shall have announced its intention to put an end to it. The high contracting Powers reserve to themselves the right to introduce by common consent into this Treaty any modification which is not opposed to its spirit and principles, and the utility of which shall have been shown by experience.

ARTICLE XXII.—The present Treaty shall be ratified, and the ratifications shall be exchanged at Paris within the period of 15 days, or sooner if possible. In faith whereof, the respective Plenipotentiaries have signed it, and affixed thereto the seal of their arms.

Done in duplicate at Paris, the 23rd day of January, in the year of our Lord 1860.

(L.S.) CowLEY.
(L.S.) RICHARD CoBDEN.
(L.S.) V. BARUCHE.
(L.S.) F. ROUHER.

THE BUDGET AND THE TREATY.

THE following are the resolutions to be proposed in Committee on Customs Acts, by the Chancellor of the Exchequer :—

1. RESOLUTIONS IMPOSING A DUTY ON CHICORY, RAW OR KILN-DRIED.—Resolved—That the following duty of customs shall be charged on the article undermentioned on importation into the United Kingdom, on and after the 11th February, 1860, viz.:—Chicory, or any other vegetable matter applicable to the uses of chicory or coffee, viz., raw or kiln-dried, the cwt, 6s. [Agreed to in committee on Friday, 10th February.]

2. WINE DUTIES.—Resolved—That in lieu of the duties and drawbacks of customs now charged or allowed on the articles undermentioned, the following duties shall be charged thereon, on importation into the United Kingdom, viz.:—Until the 31st day of March, 1861, inclusive:—Wine of and from foreign countries, red, 3s the gallon; white, 3s the gallon; lees of such wines, 3s the gallon, with an allowance for drawback on exportation until the said 31st day of March, 1861, inclusive, of 3s per gallon on such wine exported or used as ships' stores, but that no drawback be granted on lees of wine; and with an allowance of drawback to licensed dealers in wine who have complied with the provisions of the minute of the Lords of the Treasury, dated the 7th July, 1843, on the foreign wine which they have had in stock on the 10th February, 1860, on the conditions of the said minute, at the rate of 2s 9d per gallon. On and after the 1st day of April, 1861:—

	Containing less than the following rates of proof spirit, verified by Sykes' hydrometer, viz.:—						If imported in bottles.

3. SPIRIT DUTIES.—Resolved—That in lieu of the duties of customs now charged on the articles undermentioned, the following duties shall be charged thereon, on importation into the United Kingdom, viz.:—Spirits or strong waters, not being sweetened or mixed with any article so that the degree of strength thereof cannot be ascertained by Sykes' hydrometer, for every gallon of the strength of proof by such hydrometer, and so in proportion for any greater or less strength than the strength of proof, and for any greater or less quantity than a gallon, the gallon 8s 2d; other spirits, being sweetened or mixed, so that the degree of strength cannot be ascertained as aforesaid, and perfumed spirits to be used as perfumery only, the gallon 12s; spirits or strong waters imported into the United Kingdom, mixed with any ingredient, and although thereby coming under some other denomination, except varnish, shall nevertheless be deemed to be spirits or strong waters, and be subject to duty as such—water, Cologne, the flask (30 of such flasks containing not more than one gallon), each 5d; when not in flasks, as perfumed spirits, the gallon 12s.

4. ARTICLES TO BE MADE FREE OF DUTY (UNDER TREATY).—Resolved—That the duties of customs chargeable upon the goods, wares, and merchandise hereinafter mentioned, imported into the United Kingdom, shall cease and determine, viz.:—Agates, or cornelians, set; apples, raw; apples of and from British possessions; arms, as denominated in the tariff; brass, manufactures of; brocade of gold; brocade of silver; bronze, manufactures of, or of metal bronzed or lacquered; canes, walking canes or sticks, mounted, painted or otherwise ornamented; canes, umbrella and parasol sticks; caoutchouc, manufactures of; cherries, raw; china or porcelain ware, plain, painted, gilt, and ornamented; clocks, as denominated in the tariff; corks, ready made, and squared for rounding, after the 31st March, 1861; cotton manufactures, as denominated in the tariff; earthenware, not otherwise enumerated or described; embroidery and needlework, as denominated in the tariff; feathers as denominated in the tariff; flowers, artificial; fruit, raw, not otherwise enumerated; grapes; gutta percha, manufactures of, not moulded; gutta percha, articles moulded; hair, manufactures of hair or goats' wool, or of hair or goats' wool and any other material, wholly or in part made up; hats or bonnets, viz, of chip, of bast, cane or horsehair, of straw, after the 31st March, 1861; of hair, wool, or beaver, or felt hats, of silk or silk shag, laid upon felt, linen, or other material; iron and steel, wrought or manufactured, viz., machinery, wrought castings, tools, cutlery, and other manufactures of iron or steel not enumerated; iron and steel, fancy ornamental articles of iron or steel; iron and steel, manufactures of, coated with brass or copper by any galvanic process; jewels, emeralds, and other precious stones, set; lace and articles thereof, as denominated in the tariff; lead, manufactures of, not otherwise enumerated; leather manufactures (except gloves), as denominated in the tariff; leather gloves, after the 1st of February, 1861; linen, or linen and cotton manufactures, as denominated in the tariff; lucifers of wood, lucifers of wax, medlars, morphia and its salts; musical instruments, as denominated in the tariff; oil of almonds, oil of bays; oil, chemical, essential, or perfumed, as denominated in the tariff; opera glasses, single or double; pears, raw; percussion caps; perfumery, not otherwise enumerated; quinces, quinine, sulphate of; silk, millinery, or manufactures of silk, or of silk and any other material, as denominated in the tariff; stays or corsets, of linen or of cotton, or of linen and cotton mixed; sulphuric acid; toys, viz., marbles; all other toys; turnery; watches, as denominated in the tariff; woollens, viz., manufactures of wool, or of wool mixed with cotton, as denominated in the tariff; goods, being either in part or wholly manufactured, and not being enumerated or described, nor otherwise charged with duty, and not prohibited to be imported into or used in Great Britain or Ireland; but if any such goods shall be composed of any article liable to duty, as

a part or ingredient thereof, then such goods shall be chargeable with the full duty payable on such article, or if composed of more than one article liable to duty, then with the full duty payable on the article charged with the highest rate of duty.

5. Resolution reducing the Duty on Corks, Hats, and Gloves (under Treaty).—Resolved—That in lieu of the duties of customs now chargeable on the undermentioned articles on their importation into Great Britain and Ireland, the following duties shall be charged until the days hereinafter mentioned, and that from and after those days the duties shall cease and determine, viz.:—Until the 31st day of March, 1861, inclusive:—Corks, viz., ready made, 3d the lb; squared for rounding, 4s the cwt; hats or bonnets, viz., of chip, 1s 3d; bast, cane, or horsehair, 1s 3d; straw, 1s 3d the lb. Until the 1st of February, 1861, inclusive:—Leather manufactures, viz., gloves of leather: habit mitts, 1s 2d; ditto gloves, 1s 9d; men's gloves, 1s 9d; women's gloves or mitts, 2s 3d the dozen pairs.

6. Articles to be made Free of Duty (not under Treaty).—Resolved—That the duties of customs chargeable upon the goods, wares, and merchandise hereinafter mentioned, imported into the United Kingdom, shall cease and determine, viz:—Almonds, not Jordan nor bitter; ditto Jordan; ammunition, as denominated in the tariff; apples, dried; baskets; beads, as denominated in the tariff; books, as denominated in the tariff; boxes, viz., brass; ditto, not otherwise charged with duty; butter; ditto of and from a British possession; candles, as denominated in the tariff; capers, including the pickle; cassia lignea; cheese, ditto of and from a British possession; chloroform, cinnamon, cloves, coculus indicus; copper, manufactures of, not otherwise enumerated or described, and copper plates engraved; coral negligees, daguerreotype plates; dates, eggs, ditto of and from a British possession; extracts, as denominated in the tariff, ginger; glass, flint cut glass, flint coloured glass, and fancy ornamental glass of whatever kind; gongs; grains, Guinea and of Paradise; japanned or lacquered ware, liquorice paste, ditto of and from British possessions; ditto, powder, ditto of and from British possessions, ditto juice, mace, millboards; mustard, flour; ditto mixed or manufactured, except flour; nutmegs, as denominated in the tariff; nuts, small nuts; ditto walnuts, nux vomica, oilcloth, onions, oplum, oranges and lemons; paper, as denominated in the tariff; pasteboard, pears, dried; pewter, manufactures of, not otherwise enumerated; pimento, platting, as denominated in the tariff, after March 31, 1861; pomatom, prints and drawings, as denominated in the tariff; quassia, salacine, sauces, not otherwise enumerated; scaleboards, seeds, caraway; seeds, caraway, of and from British possessions; ships, foreign built, broken up, or sold to be broken up or abandoned by the owners, or sold as wreck, whether afterwards recovered or repaired or not; soap, as denominated in the tariff; soy, spa ware, spelter or zinc, manufactures of, not otherwise enumerated: stearine, tallow, tallow of and from British possessions, tinfoil; tinfoil, manufactures of, not otherwise enumerated; veneers, washing balls, wood, fire-wood; yarn, viz, woollen or worsted, as denominated in the tariff.

7. Reducing the Duty on Platting (not under Treaty),—Resolved—That in lieu of the duties of customs now chargeable on the undermentioned articles on their importation into Great Britain and Ireland, the following duties shall be charged until the 31st day of March, 1861, inclusive; and that from and after that date the duties shall cease and determine:—Platting, viz., of chip, not being of greater value than 6d per piece of 60 yards, the lb, 3d; platting, or other manufactures of straw, chip, or other materials, to be used in, or proper for making or ornamenting hats or bonnets, not otherwise enumerated or charged with duty, the lb, 1s; platting, cordonet, single and twist, of straw or other materials, the lb, 3d; platted willow, squares, the cwt, 5s.

8. General Alterations of Duty—Wood, Currants, Figs, &c. (not under Treaty).—Resolved—That in lieu of the duties of customs now chargeable on the articles undermentioned, imported into the United Kingdom, the following duties shall be charged:—Plate of gold, the oz troy, 17s; plate of silver, gilt or ungilt, the oz troy, 1s 6d; powder, viz., hair powder, the cwt, 4½d; perfumed, the cwt, 4½d; vermicelli and maccaroni, the cwt, 4½d; wood and timber, viz., timbar or wood, not being deals, battens, boards, staves, handspikes, oars, lathwood, or other timber or wood sawn, split, or otherwise dressed, except hewn, and not being timber or wood otherwise charged with duty, the load of 50 cubic feet, 1s; of and from British possessions, the load of 50 cubic feet, 1s; deals, battens, boards, or other timber or wood, sawn or split, and not otherwise charged with duty, the load of 50 cubic feet, 2s; of and from British possessions, the load of 50 cubic feet, 2s; staves exceeding 72 inches in length, 7 inches in breadth, or 3¼ inches in thickness, the load of 50 cubic feet, 2s; of and from British possessions, the load of 50 cubic feet, 2s; handspikes, not exceeding 7 feet in length, the 120, 6d; of and from British possessions, the 120, 6d; handspikes exceeding 7 feet in length, the 120, 1s; of and from British possessions, the 120, 1s; knees, under 5 inches square, the 120, 3d; of and from British possessions, the 120, 3d; knees, under 8 inches square, the 120, 1s; of and from British possessions, the 120, 1s; lathwood, the fathom of 216 cubic feet, 1s; of and from British possessions, the fathom of 216 cubic feet, 1s; oars, the 120, 3s 9d; of and from British possessions, the 120, 3s 9d; spars or poles, under 22 feet in length, and under 4 inches in diameter, the 120, 6d; of and from British possessions, the 120, 6d; spars or poles, 22 feet in length and upwards, and under 4 inches in diameter, the 120, 1s; of and from British possessions, the 120, 1s; spars and poles of all lengths, 4 and under 6 inches in diameter, the 120, 2s; of and from British possessions, the 120, 2s; spokes for wheels, not exceeding 2 feet in length, the 1,000, 1s; of and from British possessions, the 1,000, 1s; spokes for wheels, exceeding 2 feet length, the 1,000, 2s; of and from British possessions, the 1,000, 2s; planed or otherwise dressed or prepared for use, and not particularly enumerated or otherwise charged with duty, for every 100*l* value, 5*l*; of and from British possessions, for every 100*l* value, 5*l*; currants, the cwt, 7s; figs, the cwt, 7s; fig cake, the cwt, 7s; hops, the cwt, 15s; raisins, the cwt, 7s.

9. Repealing the Prohibition to the Importation of Malt, and Fixing a Duty thereon.—Resolved—That so much of Act 16th and 17th Vict., cap. 107, sec. 44, as prohibits the importation of malt, be repealed, and that the following duty be charged thereon, on importation into the United Kingdon, viz.:—Malt, 3s, per bushel.

10. Tea and Sugar Duties.—Resolved—That the duties and drawbacks of customs now charged and allowed on the articles undermentioned shall continue to be levied, charged, and allowed, on and after the 1st of April, 1860, until the 1st of July, 1861, on importation into the United Kingdom, or on exportation therefrom to foreign parts, or on removal to the Isle of Man for consumption therein, viz.:—Tea, sugar, as denominated in the tariff; molasses; cherries, dried; comfits, dry, confectionary; ginger, preserved; marmalade; plums, preserved in sugar; succades, including all fruits and vegetables preserved in sugar not otherwise enumerated.

11. Import and Export Charge of One Penny on Goods in Packages and in Bulk.—Resolved—That in aid of the charges of the customs establishments incident to the importation and exportation of goods, and to the statistical accounts thereof, there shall be charged (irrespective of any duties of customs or other rates or charges payable by law), upon the articles hereinafter mentioned, on the landing and shipping thereof for importation into or exportation from the United Kingdom of Great Britain and Ireland, the respective rates and charges following, viz.:—Goods in packages or parcels, per package or parcel, 1d. Goods in bulk—By weight, for every ton, 1d; by measure, per quarter, 1d; by measure, per load, 1d; by number, per 1,000, 1d; animals, per head, 1d. The rates on goods in bulk to be charged by weight, measure, or number, as such goods are required to be returned to the officers of customs for the preparation of the statistical accounts of trade and navigation of the United Kingdom.

12.—Charges to be Levied on the Removal of Warehoused Goods under Bond.—Resolved—That in aid of the charges of customs establishments incident to the removal of goods under bond, there shall be charged (irrespective of any duties of customs, or other charges payable by law) upon the several articles hereinafter mentioned, and which are or may be warehoused in any warehouse for the security of duties of customs under the laws and regulations for the warehousing of goods, on removal of such goods under bond from any such warehouse in any port or place to any such warehouse in any other port or place, the respective rates or charges following, viz.:—Tea, the 100 lbs, 1s 4d; sugar, the cwt, 4d; coffee, the 100 lbs, 6d; cocoa, the 100 lbs, 6d; pepper, the 100 lbs, 6d; tobacco, the 100 lbs, 1s; wine, the 100 gallons, 5s; spirits, the 100 gallons, 5s; fruit, viz., figs, currants, raisins, the cwt, 4d; other goods, the package, 3d.

13. Charges on Operations in Warehouses.—Resolved—That before any of the operations hereinafter mentioned are or shall be performed at the requeat of the proprietor or his agent, in respect of goods deposited in any warehouse or place for the security of duties of customs under the laws and regulations in force for the warehousing of goods, there shall be charged for every such operation the respective rates or charges hereinafter mentioned, irrespective of any duties of customs or other rates or charges upon the importation into Great Britain and Ireland, or otherwise, of the goods in respect of which such operations are performed, viz.:—Repacking, 1s the package; reweighing, 4d the package; filling up casks, 1s the cask; racking casks, 2s the cask; vatting casks, 2s the cask; bottling, 2d the dozen bottles; disgorging bottled wine, 6d the case; repacking bottled wine or spirits, 6d the case; regauging, 1s the case; other operations, 6d the package. Provided that when any such operation is required for the purpose of removing goods from any such warehouse in any port or place, and in respect of which the rates or charges payable on removal under bond shall be paid, such operations shall be exempt from the said rates or charges in respect thereof, and that delivery out of warehouse upon payment of duty or for exportation be not held to be an operation within the meaning of this resolution.

The following are the resolutions to be proposed in committee of ways and means by the Chancellor of the Exchequer:—

1. Contract Notes.—That towards rising the supply granted to Her Majesty, the exemption from stamp duty contained in the schedule to the Act 56 Geo. III., chapter 184, and also in the schedule to the Act 55 Geo. III., chapoer 56, in the following words, that is to say, "Memorandum, letter, or agreement made for or relating to the sale of any goods, wares or merchandise," shall be repealed. And there shall be charged and paid for and upon every note or memorandum, commonly called a contract note, for or relating to the sale or purchase of any goods, wares, or merchandise, or of any stocks, funds, or securities, or share or shares of or in any joint stock or other public company, and for and upon every agreement under hand only, letter, minute, or memorandum made by the vendor or purchaser, or any person on their behalf respectively, for or relating to the sale or purchase of any goods, matters, or things as aforesaid, the stamp duty of one penny.

2. Dock Warrants.—That towards raising the supply granted to Her Majesty, for and upon any warrant or document commonly called a dock warrant, or any other writing or document, by whatever name the same shall be designated, entitling or intended to entitle any person therein named, or his assigns, or the holder thereof, to the property in any goods, wares, or merchandise lying in any dock or warehouse, or upon any wharf; and also for and upon every transfer of any such warrant, writing, or document as aforesaid, there shall be charged the stamp duty of threepence.

3. Bills, Drafts, or Orders.—That towards raising the supply granted to Her Majesty, all bills, drafts, or orders for the payment of any sum of money, though not made payable to the bearer or to order, and whether delivered to the payer or not; and all writings or documents entitling or intended to entitle to the payment of any sum of money any person whatever, whether named or designated therein or not, or whether delivered to him or not, shall respectively be deemed to be bills, drafts, or orders for the payment of money chargeable with stamp duty as if the same had been made payable to bearer or to order.

4. Extracts.—Births, Deaths, &c.—That towards raising the supply granted to Her Majesty, for and upon every certified copy or extract of or from any register of births, deaths, or marriages, there shall be charged the stamp duty of 1d.

5. Cost Book.—That towards raising the supply granted to Her Majesty, for and upon every note, instrument, or writing requesting or authorising the purser or other officer of any mining company conducted on the cost book system, to enter in the cost book any transfer of any share or part of a share in any mine, or any notice to such purser or officer of any such transfer as aforesaid, there shall be charged and paid the stamp duty of 6d.

6. Heritable Bonds.—That towards raising the supply granted to Her Majesty, money secured on heritable property in Scotland, and money secured by Scotch bonds in favour of heirs and assignees, excluding executors, shall be held and interpreted to be moveable property, and shall be included in any inventory to be exhibited and recorded in any commissary court in Scotland, of the estate and effects of any person deceased entitled thereto, and in England and Ireland respectively shall be deemed to be estate and effects for or in respect whereof any probate of will or letters of administration shall be granted; and every such Inventory, probate, and letters of administration shall be chargeable in respect of such moveable property.

7. Agreements.—That towards raising the supply granted to Her Majesty, the respective stamp duties now chargeable upon any agreement, or any minute or memorandum of an agreement, made in England or Ireland under hand only, or made in Scotland without any clause of registration, and not otherwise charged nor expressly exempted from all stamp duty, where the matter thereof shall be of the value of 20*l* or upwards, whether the same shall be only evidence of a contract, or obligatory upon the parties from its being a written instrument, together with every schedule, receipt, or other matter put or endorsed thereon, or annexed thereto, shall cease; and in lieu thereof there shall be charged for and upon every such agreement, minute, or memorandum as aforesaid, whether the matter thereof shall or shall not be of the value of 20*l* or upwards, the stamp duty of 6d. And where the same shall contain 2,160 words, then for every entire quantity of 1,080 words contained therein over and above the first 1,080 words, a further progressive duty of 6d. Provided always, that where divers letters shall be offered in evidence to prove any agreement between the parties who shall have written such letters, it shall be sufficient if any of such letters shall be stamped with a duty of 1s.

8. Building Societies.—That towards raising the supply granted to Her Majesty, any exemption from stamp duty granted or conferred by the Act 6 and 7 William IV., cap. 32, for the regulation of benefit building societies other than the exemptions contained in section 8 of the said Act shall cease and be repealed.

9. Agreements for Leases.—That towards raising the supply granted to Her Majesty, every agreement for a lease or tack of any lands, tenements, hereditaments or heritable subjects, and every agreement, minute, or memorandum of agreement, containing the terms and conditions on which any lands, tenements, hereditaments, or heritable subjects are let, held, or occupied, shall be chargeable with the stamp duty payable on a lease or tack for the term, rent, consideration, and conditions mentioned in such agreement, minute, or memorandum. And any lease or tack of the same lands, tenements, hereditaments, or heritable subjects, afterwards made in pursuance of, and conformably to, any such agreement, minute, or memorandum, which shall have actually paid the duty payable on such lease or tack as aforesaid, shall not be chargeable with any higher stamp duty than 2s 6d, exclusive of progressive duty. Provided always, that where any such lease or tack would, but for the last preceding provision, be liable to any higher rate of stamp duty than 2s 6d (exclusive as aforesaid), such lease or tack shall not be available unless stamped with a particular stamp for denoting or testifying the payment of the full and proper stamp duty on such agreement, minute, or memorandum as aforesaid, which said particular stamp shall be impressed upon such lease or tack on the same being produced, together with such agreement, minute, or memorandum, and on the whole being duly executed or signed, and duly stamped in all other respects.

10. Probate Duty.—Powers of Appointment.—That towards raising the supply granted to Her Majesty, the stamp duties payable by law upon probates of wills and letters of administration, with a will annexed, in England and Ireland, and upon inventories in Scotland, shall be levied and paid in respect of all the personal or moveable estate and effects which any person hereafter dying shall have disposed of by will under any authority enabling such person to dispose of the same as he or she shall think fit.

11. Malt Credit.—That towards raising the supply granted to Her Majesty, the time limited for payment of the duty of excise on malt by every maltster or maker of malt, who shall have given security in the manner directed by the Act passed in that behalf, in respect of all malt begun to be made on or after the 1st day of October, 1860, shall be six weeks in lieu of 12 weeks, after the making of such account or return of duty as in the said Act is mentioned.

12. Hops.—That towards raising the supply granted to Her Majesty, in lieu of the duties of excise now payable on hops growing or to grow in Great Britain, there shall be charged the following rate of duty, that is to say:—For every pound weight avoirdupois of such hops which shall be cured and made fit for use, the duty of three halfpence; such duty to be paid by the owner or possessor of such hops, and to be payable on the 1st day of January next after the curing thereof.

13. Chicory.—That towards raising the supply granted to Her Majesty, there shall be charged and paid upon chicory, or any other vegetable matter applicable to the uses of chicory or coffee, grown in the United Kingdom, for every hundredweight thereof, raw or kiln-dried, until the 1st of April, 1861, the duty of 3s, and on and after that day the duty of 6s, and so in proportion for any greater or less quantity than a hundredweight.

14. Game.—Licenses to Kill.—That towards raising the supply granted to Her Majesty, the duties contained in schedule (L) of the several Acts 48 Geo. III., cap. 55, and 52 Geo. III., cap. 93, and payable in respect of killing game, and also the further additional duty payable in respect of the same under the Act 3 Vic., cap. 17, sec. 8, shall cease and determine on the 5th day of April, 1860, and in lieu thereof there shall be charged and paid the following duties, that is to say:—For a license to be taken out by every person who shall use any dog, gun, net, or other engine for the purpose of taking or killing any game whatever, or any woodcock, snipe, quail, or landrail, or any conies, or shall take or kill, by any means whatever, or shall assist in any manner in the taking or killing, by any means whatever, any game, or any woodcock, snipe, quail, or landrail, or any coney, if such person shall be a servant to any person duly charged to the duties of assessed taxes in respect of such servant, and shall be acting by virtue of any deputation or appointment, duly registered or entered as gamekeeper for any manor or royalty in England, Wales, or Berwick-upon-Tweed, or for any lands in Scotland, 1*l* 7s 6d; and if such person shall not be such servant acting as aforesaid, then, if the license shall be taken out after the 5th day of April, and before the 1st day of October in any year, 3*l*; or, if the same shall be taken out on or after the 1st day of October, and before the 1st day of December in any year, 2*l*; or, if the same shall be taken out on or after the 1st day of December in any year, and before the 6th day of April in the following year, 1*l*.

15. Eating-houses.—Every person who shall, in any house, room, shop, or building, sell any victual or refreshment, to be consumed on the premises where the same shall be sold (except beer, cider, wine, and spirits respectively sold under a proper license in that behalf); and every person who shall keep open any house, room, shop, or building for the consumption therein by the public of any victual or refreshment (except as aforesaid), although the same shall not be sold therein, shall respectively be deemed to keep a refreshment house, and shall, unless he shall be duly licensed by the justices to keep a common inn, alehouse, or victualling-house on the same premises, take out a license to keep a refreshment house; and every such license shall be charged with the respective duties following, that is to say:—For every license to keep a refreshment-house, if the house and premises shall be under the rent and value of 25*l* a year, 10s; and if the same shall be of the rent or value of 25*l* a year or upwards, 1*l*; and if any person who shall take out a license to keep a refreshment house shall be desirous of selling beer or wine, or beer and wine by retail, to be consumed therein, a license shall be granted to him for that purpose on payment of the respective duties following, that is to say:—For every such license to sell beer only, or wine only, if the house and premises shall be under the rent and value of 25*l* a year, 3*l*; and if the same shall be of the rent or value of 25*l* a year or upwards, 4*l* 10s; and for every such license to sell both beer and wine, if the house and premises shall be under the rent and value of 25*l* a year, 5*l*; and if the same shall be of the rent or value of 25*l* a year, 8*l*. Provided always that no license for which the foregoing duties shall be paid shall authorise any person to keep open any refreshment house after the hour of twelve o'clock at midnight, or to open the same before the hour of four o'clock in the morning. And for every such license as aforesaid which shall authorise any person to keep open any refreshment house after the hour of twelve o'clock at midnight, and to open the same before the hour of four o'clock in the morning, there shall be charged and paid double the rates of duty aforesaid respectively.

16. Paper Duty.—That on and after the first of July, 1860, all duties of excise on paper, button-board, mill-board, paste-board, and scale-board, made in the United Kingdom, and all drawbacks and allowances in respect thereof, shall cease and be repealed.

17. Income Tax.—That, towards raising the supply granted to Her Majesty, there shall be charged, collected, and paid, for one year, commencing on the 6th of April, 1860, for and in respect of all property, profits, and gains, charged or chargeable under the Act passed in the 16th and 17th years of Her Majesty's reign, chapter 34, for granting to Her Majesty duties on profits arising from property, professions, trades, and offices, either by assessment, contract of composition, or otherwise, the following rates and duties, that is to say:—Upon any assessment on the annual value or amount of any property, profits, or gains (except property, profits, and gains chargeable under schedule (B) of the said Act), the rate or duty of 10d for every 20s of the annual value or amount of all such property, profits, and gains respectively; and for and in respect of the occupation of lands, tenements, hereditaments, and heritages chargeable under schedule (B) of the said act, the rate or duty of 5d in England, and of 3½d in Scotland and Ireland respectively, for every 20s of the annual value thereof.

Agriculture.

AGRICULTURAL PROGRESS IN FRANCE.

In resuming our notice of the Emperor's efforts to induce improvement amongst French agriculturists, we must refer for a moment to the statement made in reference to the Imperial dairy farm at St Cloud, that the Ayrshire heifers purchased at the Paris Exhibition had proved barren. We have since been informed that other Ayrshire heifers have since been sent from this country to the Imperial farms, which have also proved non-breeders, and that experienced men in this country, who saw the animals which had been selected by the Emperor's agents, said at once they would not breed. Now it is greatly to be regretted that the well-devised and spirited plans of the Emperor for affording to French agriculturists the opportunity of trying a breed of dairy cattle, which has been found so useful in Scotland, should be counteracted by want of vigilance or want of discretion on the part of his agents. The system of prize-giving for live stock, which has so largely prevailed of late in this country, has diffused good stock, if it has not actually promoted its improvement, but it has at the same time led occasionally to acts of fraud, the possible perpetration of which should render purchasers, especially foreign purchasers, of prize stock extremely cautious.

Several of the agricultural journals have lately referred to the case of "Volga," a Shorthorn cow of great beauty, which has been competing at numerous exhibitions as an in-calf heifer, and as a cow in calf or in milk, while it has recently been ascertained that she never bred, having been sold by her first owner to a butcher to be slaughtered! On the last occasion she was actually shown with a calf by her side (not her own), and was awarded the prize for the best cow in milk. Of course such atrocious frauds are comparatively rare, but there are not a few two and three-year-old heifers shown as in calf which have been so pampered and "conditioned" for exhibition that the chances are more than equal that they will not breed. Now these are just the animals likely to be bought by foreign agents who may not be extremely cautious and well-advised. These animals are usually creatures of great beauty, but such defects as they may have are hidden by their "condition"—*i.e.*, their fat,—while their repreductive powers are thereby reduced to a minimum. A well-advised foreigner coming to this country to purchase breeding stock should avoid the prize specimens, but treat them as guides merely to the herds or flocks to be inspected at the farms of the breeders, where, if really competent judges of stock, the foreign agent may select animals which will do credit to his own discrimination and prove useful to his employer. It is no imputation on the general skill of a foreign purchaser to say that he will scarcely be able to act safely on his own judgment in purchasing breeding stock, while he is not a little liable to be imposed upon by unscrupulous exhibitors. Usually his best plan will be to throw himself fairly on the honest or respectable breeders, and, as a rule, to avoid prize animals. From this digression let us revert to the account of the Imperial farming. We may add, that since our former notice was published Mr Gladstone's grand and comprehensive financial scheme has been announced, and one of its results cannot fail to be a vast increase of intercourse between the people of this country and of France. No class will benefit more by this than the French agriculturists and breeders of live stock,—and we doubt not that the impulse now given by the Emperor's practical examples in husbandry will eventuate in much and general improvement in the agriculture of France, especially in the branches of green cropping and stock keeping.

The Imperial domain of "Des Landes" is situated in the middle of the Grande Landes, and about 60 miles from the great commercial city of Bordeaux. The railway from Bordeaux to Spain by Bayonne passes through the domain, and there are two stations close to the property, from which the sea is distant about seven miles. The extent of the Imperial domain is about 18,000 acres. The soil is sandy and very light, consisting in a great degree of pure fine sand. The subsoil is sandstone, and at about four feet deep a tertiary sand which contains water. There is no clay on the property, and none is found within a sufficient distance to be profitably brought. The original herbage was scanty and meagre, consisting chiefly of a thin heath; in short, it was a wretched sheep-walk. Twenty years ago this land sold at from 3f to 5f per hectare (2½ acres per hectare); now its value is about 60f, and the Imperial domain was bought for 70f per hectare. Possession was obtained at the beginning of 1856. The first step was to enclose the property, for in France there is no law to prevent animals running in common over any land not under crop. Next it was drained, for in the winter great part of the Landes is swampy. Though the tract is apparently flat, there is a sufficient and uniform fall to carry off the water. Then roads were made with proper side ditches two yards wide, and three or two feet deep according to the level of the land. Similar ditches were also made all round the property. Smaller ditches carry off the water from all parts of the land, which is divided into suitable fields by fences made of turf. The land has by these means been laid quite dry to a depth of three and four feet. Sluices are placed in the ditches so as to retain the water in the summer at a depth of about 2½ feet. In such a soil, of course, nothing more than open ditches around the fields are required for its complete drainage, and thus this land has been laid quite dry, at an average cost of 3f per hectare. Bearing in mind that the object of the Emperor, in purchasing this great tract of moor land, "was to show the best method of improving the land, and the most profitable mode of applying capital, skill, and labour, to reclaim land from its sterile condition," he has wisely determined to adopt locally known means of improvement. The plan he has determined on is to cover this property to the extent of four-fifths with wood, "and, in order to increase the population, to have persons to cultivate the forests of 'pines maritima,' which require a good deal of superintendence at every stage of growth." Besides the plantations, fourteen small farms, with from 40 to 50 hectares of land attached to each, are formed, in order to set an example of agricultural improvements. "The low-lying and best parts are to remain under grass, the highest parts being planted or sown give to the whole the aspect of a large park." Thus taste and beauty are no less promoted than utility by these improvements. Now this plan is highly judicious. To have attempted to bring the whole of such a tract of poor light land into cultivation would have involved an enormous expense which could never have been returned to the proprietor, and, instead of operating as an example to the neighbouring landowners, might have effectually deterred them from attempting any improvement. By the actual system adopted, advantage has been taken of the natural capabilities of the district to show how capital may be judiciously laid out in improvement. "In a few years this Imperial domain will present from the railway a most picturesque appearance, with fine forests of pinus maritima mixed with some other trees, and studded with a few well-managed small farms and good meadows sheltered by plantations." By 1858 no less than 7,500 acres have been sown, in the most economical and effective manner, with the pinus maritima, at the cost of 12f 80c per hectare. The details of this sowing are given in the *North British Agriculturist*, but we can state the results only. It is sufficient to say, that the Emperor has adopted the method which the experience of the district has shown to be the best for forming and protecting the growth of the young plantations. In the autumn of 1859, 2,000 hectares more of plantation will have been formed, which will complete the operation. The whole outlay will be about 15f per hectare, which, added to the cost of the land 70f per hectare, will make a total of 84f per hectare. The cost of this outlay at the end of 30 years, calculated at compound interest, will be 363f per hectare; the selling price of the hectare of plantation is from 700f to 800f per hectare, showing a profit on the plantations of from 337f to 437f per hectare. We shall return to this subject in reference to the further results of this improvement on an early occasion.

Literature.

NARRATIVE OF LORD ELGIN'S MISSION TO CHINA AND JAPAN. By LAURENCE OLIPHANT. 2 Vols. 1860.

LORD ELGIN'S Mission has been given to the public by Lord Elgin's Private Secretary; and a better historiographer for such an occasion could scarcely have been found. Mr Oliphant is an experienced traveller and a practised writer; he knows what to report and how to report it; he enters on expeditions with the true spirit of a hardy and adventurous explorer, and he handles his pen with spirit, taste, and reticence. In a word, he combines qualifications which are usually found dissevered. If a man is accustomed to wander over the world, to rough it in all climates, to penetrate into wild places, to live hard and to venture much, in nine cases out of ten his literary faculty has been undeveloped or untrained, his workmanship is inadequate to do justice to his materials, and he lacks that mastery of style and arrangement which makes lucid narrative and pleasant reading. If, on the other hand, he is eminent and experienced in the author's craft, the chances are that a studious and sedentary life will have impaired his habits of observation, softened away his spirit of adventure, made him little able to endure privations and fatigue, and disposed him to be disproportionately prolix in describing them. Mr Oliphant errs in neither direction; he evidently likes to see everything, but has discretion enough to know that his readers will only care for a *selection* from what he has seen; his style is unusually simple and easy, never ambitious and never heavy; while his good sense and right feeling are conspicuous in every page.

Two portions of the book are particularly interesting—the visit to Japan, and the operations in the Gulf of Petcheli. The latter derives a special interest in reference to the recent disaster at the mouth of the Peiho. Lord Elgin seems at once to have hit the nail on the head—so far at least as a clear perception of what was necessary to do, and a decided use of the very imperfect means at his disposal for doing it, are concerned. He saw at once that the only way to bring the Chinese Emperor to reason and compel him to enforce the necessary policy on his viceroys and governors throughout the country, was to bring the pressure to bear as near the capital as possible,—that, in fact, any lesson we desired to teach must be taught, not at Canton, but at Pekin. Accordingly, as soon as the unlucky circumstances which embarrassed him on his first arrival in the Chinese Seas permitted, he got all his available naval force up into the Gulf of Petcheli; and, after a long and disastrous delay caused by the non-arrival of expected and appropriate gunboats, he entered the Peiho, bombarded and took in three or four hours the forts where we have recently suffered so deplorable a check, and proceeded, without encountering any further resistance, to Tien-tsin, a large city situated about 60 miles up the river, and the nearest place of importance to Pekin. He was thus enabled in a great degree to command the capital, by occupying the entrance to the Grand Canal as well as that of the stream through which the annual supply of grain reaches Pekin. As soon as he had attained this important and critical position, the victory was virtually won; commissioners with full powers were at once sent down to meet him; a most successful commercial treaty was negotiated and ultimately approved by the Emperor; and by the display of a little firmness, promptitude of action, and directness of purpose, the whole object of the expedition was triumphantly accomplished. We wis particularly to draw attention to Lord Elgin's reasons for insisting upon the most questionable and obnoxious clause in the treaty—viz., the right of our Minister in China, when appointed, to reside at Pekin or to visit it at pleasure,—because this stipulation has been blamed as harsh and unwise, and because it has indirectly been the cause of the present renewed *imbroglio*. Lord Elgin was

equally clear as to the necessity of extorting the privilege, and the importance of using it sparingly as possible;—and in both points we think he was unquestionably in the right. The following is Mr Oliphant's account of Lord Elgin's views and reasons:—

The instructions furnished by the Emperor to Yeh furnish unmistakable evidence of the inefficacy of protracted diplomacy at a distance to influence the policy of the Imperial Government in its treatment of foreigners; while, so far from the capture of Canton—which was the result of his acting in accordance with those instructions—humbling the Court of Pekin, as it was prophesied at Hong-Kong would be the case, the hauteur and and obstinacy of the Imperial Government were increased by this event. The Prime Minister declined to communicate direct with Lord Elgin according to treaty, and refused to send commissioners to meet him at Shanghai. At a later period, when we were dallying in the Gulf, orders were sent down to Canton calling out the Braves, who immediately responded to them, and attacked the city. Shortly after the signing of the treaty, counter orders were despatched disbanding them, and commanding them to remain at peace with foreigners, and these were also ultimately obeyed. The popular impression among the British heretofore had been, that the Canton question was purely local, and that authorities and Braves were alike acting independently of orders from Pekin.

But if these incidents went to show how impossible it was to influence the Court of Pekin by coercion applied at remote parts of the Empire, still more hopeless was it to effect this object by diplomacy exercised at a distance from the seat of Government. Yeh's stubbornness and Keying's shuffling alike proved that a provincial governor, charged with the conduct of foreign affairs, was approved of at Court only so long as he could show that he was thwarting the barbarians, whether by obstinacy or craft. To bring conviction to the mind of a functionary so situated was of little avail, because it only made him an object of suspicion to his Imperial Master. Lord Elgin's observation had, therefore, led him to the conclusion, that it was necessary to be at the heart to affect the extremities, and that it was impossible to affect the heart through the extremities. Conceiving this to be the knot of the situation, he determined to establish the principle of direct communication between the British Ambassador and the Imperial Ministers at the capital, and to secure, at all events, the right of the former to a permanent residence at Pekin. It would rest with the Government whether to exercise the right or not, attended as it doubtless was with many objections of a practical character,—such as difficulties of access, severity of climate, absence of accommodation in the first instance, and almost absolute isolation. But whatever point might ultimately be fixed upon for the residence of the Minister, the fact that he had a right to be at Pekin would be a source of influence in his hands, scarcely less powerful than that which he might acquire by his actual presence there; and the dread of his exercising that right operate as a check not less effectual than if it was already in existence. It would still be *through* the heart, although not absolutely at it, that the extremities would be affected. It will be seen from Lord Elgin's despatch from Shanghai, of the 5th November, which I have placed in the Appendix, upon what grounds he was ultimately induced to recommend non-residence at Pekin.

The account of the visit to Japan is far the most agreeable and entertaining portion of the book. The voyagers saw everything *couleur de rose*,—as was not unnatural, considering whence they came. Everything in China seemed disgusting and contemptible: everything in Japan attractive and satisfactory. The scenery appears to be exquisite; the views which burst upon the traveller at every turn fascinating in the extreme; the people, friendly, ingenious, industrious, good-humoured, full of fun, and above all *clean*,—which, after the universal nastiness of China, was felt as an unspeakable relief. The authorities seem at first to have desired to keep the strangers at a distance; but as the strangers would not be so kept, and were in fact very impudent, the Japanese gave in with a pleasant laugh, and made the best of the matter, and were as civil and attentive as possible to their self-invited guests. Mr Oliphant does not enter upon the question of ethnology; but from the various portraits and groups with which the volumes are illustrated, it is clear that the Japanese must come from a very different stock from the Chinese. The government seems to be a mild, vigilant, bureaucratic despotism; the people are orderly, submissive, happy, prosperous, and diligent; and on the whole far the most really civilised, hopeful, progressive, and teachable nation of the far East. A fair and beneficial commercial treaty was negotiated with them without difficulty; and if we are only judicious and conscientious in our selection of consuls to reside in Japan, and can only abstain from our usual turbulence and insolence in our dealings with the people, we may inaugurate an extensive interchange which shall be mutually profitable and pleasant.

FRASER'S MAGAZINE. February. J. W. Parker.
MACMILLAN'S MAGAZINE. February. Macmillan.
THE CORNHILL MAGAZINE. February. Smith and Elder.

"FRASER'S MAGAZINE" is, as usual, ably written,—full of entertaining matter, spreading over a wide surface. The essayist who calls himself A. K. H. B. is one of the pleasantest writers, in his own rather light line, of the present day. The essay on "Giving Up and Coming Down" is full of quaint, talkative humour, mixed with insight and wisdom. Mr Kingsley has a song, but the most poetical piece in this number of Fraser is that on Autumn, which has much quiet beauty. Mr Hare, the author of the book on Representation which has attracted so much well-deserved attention, has a paper on the *literary* views of the representative question, and their superiority to the political. There is a light amusing paper on the "Battle-fields of 1859," and other articles of interest. Few of the subscribers to this thoughtful magazine are likely to leave it, we think, for its younger rivals.

"Macmillan's Magazine," No. 4, is the best number yet issued. It compares creditably with the new number of the "Cornhill Magazine." Mr Thackeray and Mr Maurice have both short papers on Lord Macaulay,—the former in the "Cornhill," the latter in "Macmillan's Magazine." Mr Thackeray's is of course well-written, but says little. Mr Maurice picks out with great truth the one feature which gives unity to Lord Macaulay's unfinished history, and renders it perhaps even less really fragmentary than it might have been had it covered the reign of Anne. There is also in "Macmillan" a very striking record of Macaulay's youth, in two letters from Mrs Hannah More. "Tom Brown at Oxford" is continued in "Macmillan's Magazine" with spirit and effect.

Mr Thackeray and Mr Trollope are of course both of them very entertaining in the new number of the "Cornhill Magazine," especially Mr Trollope. But the principal attraction of the number is the Poet Laureate's "Tithonus," which is quite one of his finer minor poems. The paper on "Young Hogarth,"—apparently in the style of Mr Thackeray, but said to be written by Mr Sala,—is also entertaining, though somewhat spun out. Mr Monckton Milnes has contributed some very weakly verses, to which Millais has added a very ugly illustration.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The French Government has not yet published the French text of the treaty, but it has given a very full analysis of it. This analysis, however, does not say what the English treaty says, that from 1st October, 1864, the 30 per cent. *ad valorem* duties are to be reduced to a maximum of 25. It mentions one point which Mr Gladstone omitted, namely, that the *ad valorem* duties not exceeding 30 per cent. are to be fixed by a special treaty before the 1st July next; and are to be based on the average price during the last six months of the different articles to be taxed.

One very objectionable clause of the treaty is the 3d:—"It is understood that the rates of duty mentioned in the preceding articles are independent of the differential duties in favour of French shipping, with which duties they shall not interfere." Now these differential duties are very oppressive to foreign shipping, and especially to that of England, which takes a far larger share in the navigation of France than any other country. The following table will give some idea of what the the duties are:—

	French Vessels. (Most of these rates are per 100 kilogs—2 cwts)	Foreign Vessels.
Timber	5c	1f
Wood for cabinet making, cedar, &c.	Exempt or from 1f to 55f 50c	7f to 64f 50c
Wax candles	85f to 220f	91f 70c to 233f 50c
Coffee	50f to 100f	Prohibited, or 105f
Camphine	20f to 150f	50f to 160f
Caoucthouc	Exempt, or 5f to 200f	10f to 212f 50c
Pasteboard	80f to 200f	86f 50c to 212f 50c
Chocolate	150f	160f
Wax	1f to 2f	7f to 16f
Cochineal	50c to 1f	1f 50c
Copper	10c to 286f	1f to 302f 80c
Coal	15c to 30c	65c to 80c
Elephant's teeth	Exempt, or 50f	60f
Tin ore and tin	Exempt, or 2f to 60f	Prohd., or 1f to 65f 50c
Iron	10f to 14f	11f to 15f 40c
Cotton	Exempt, or 10f to 25f	Prohibited, or 7f to 25f
Flax and hemp threads	38f to 260f	41f to 303f 80c
Tallow, &c.	2f to 20f	8f to 30f
Manure and guano	Exempt, or 50c to 2f	Prohibted, or 3f
Hops	45f	49f 50c
Oysters, French fishery	Exempt.	Prohibited.
Do. Foreign fishery	1f 50c	5f
Indigo	50c to 3f	4f
Agricultural implements	80f to 120f	86f 50c to 128f 50c
Wool	5f to 100f	15f to 115f
Machinery	15f to 200f	16f 50c to 212f 50c
Marble	2f to 40f	2f 70c to 44f
Lime, slates, bricks, and other materials for building	Exempt, or 1c to 30f	Prohibited, or 1c to 46f
Paper	80f to 150f	86f 50c to 160f
Perfumery	Exempt, or 8f to 164f	9f 90c to 174f 70c
Skins	Exempt, or 1c to 612f	10c to 629f 50c
Lead	Exempt, or 5f to 26f	Prohibd. or 1f to 28f 60c
Fish	Exempt, or 40f to 100f	Prohbd. or 11f to 107f 50c
Earthenware or porcelain	6f to 327f	6f 60c to 344f 50c
Rice	50c to 3f	4f 50c to 9f
Salt	Exempt, or 50c to 2f 75c	Prohibd. or 1f to 3f 25c
Silk	5c to 62f	
Sugar	35f to 63f	Prohibited, or 65f to 68f
Tobacco	Exempt, or 5f to 7f	10f to 15f

By the re-establishment of the sliding scale, too, foreign vessels are also prejudiced; the duty on the import of the hectolitre of wheat being 10c to 4f 75c by French vessels, but 15c to 6f by foreign; and the duty on other grain and on flour being in the same proportion.

The treaty with England will, as I explained in my last, not have occasion to be submitted to the Legislative Body, the Constitution giving the Emperor power to conclude such things of his own authority; accordingly, when sanctioned by the British Parliament, His Majesty will promulgate it here. But his other commercial reforms, that is to say, the abolition of the duty on cotton and wool, and the reduction of the duty on coffee and sugar, will have to go before the Legislature; and so strong are the prohibitionist and protectionist parties therein, that it is not impossible that the measures, notwithstanding their evident utility, may encounter opposition. The precise date which the Government will fix for the suppression of the prohibitions, and the adoption of the reductions is not yet authoritatively known; but the 1st of July next is still spoken of for the former, whilst, as regards the latter, fears are expressed that the reduction in sugar will not commence before the early part of the next year, and will not be completed until 1862; and that, for "financial reasons," the reduction in coffee will not take place before the 1st Jan., 1862.

Addresses to the Emperor on the subject of the proposed reforms are still coming in; but seeing that the great towns and great seaports have already pronounced, these addresses present little interest. I notice, however, one from St Etienne, the centre of the ribbon and fire-arms trades:—it expresses pleasure of having the English market thrown open to ribbons, and prays earnestly for liberty to export muskets and other military weapons which at present it is forbidden to do. St Etienne being in a department in which there are several ironworks, the address prays that measures may be adopted for enabling those works to obtain the conveyance of fuel cheaper than at present, in order to enable them to sustain English competition. A similar wish I find expressed in the name of the owners of the coal-pits of the department of the Pas de Calais,—that nearest England, in which Boulogne and Calais are situated.

The Bank of France has not to-day made any alteration in its rate of discount.

On the Bourse very little business has been done during the past week, though this is generally the business part of the year. The uncertainty which hangs over the political situation is, of course, the great cause of the stagnation. The following are the quotations:—

	Thursday Feb. 9.		Thursday Feb. 16.
	f c		f c
Threes	67 75		67 55
New 3 per Cent. Loan	67 80		67 70

South Austrian Lombard	443 75		542 50
Russian	485 0		481 25

By decree of the Emperor, just issued, a great many natural and manufactured products of Algeria, which have heretofore been more or less heavily taxed on being imported into France, are to be admitted duty free. Amongst the natural productions are silk, wax, preserved provisions, bread, sea biscuit, timber, madder, iron, copper, tin and zinc; and amongst the manufactured articles are perfumery, candles, wines, alcohols, vinegar, mats, rope, paper, pasteboard, straw hats, &c. On soda, soap, skins, certain species of cloth and certain articles in wool, the decree imposes rather heavy duties.

One of the great banking firms in the city has under consideration a grand project for establishing extensive docks and warehouses, on the English plan, at Saint Nizaire, near Nantes.

The Credit Foncier is, it is said, about to obtain authorisation to lend money on mortgage to towns and villages (*communes*), a branch of business for which it has hitherto been debarred, but which is likely to be profitable.

The following is an account of the markets:—

Flour.—At *Paris*, prices have risen, owing chiefly to the weather having latterly been very severe all over France. Yesterday the ordinary sorts were 53f to 55f the sack of 159 kilogs (sack included); good marks, 56f to 57f; superior, 57f 50c to 58f. Four marks have been firm, and yesterday they were at 57f for the month, 57f 50c for March, 58f for March and April.

Wheat.—Yesterday, the quotations were from 29f 50c to 31f 75c; and for some small lots, 32f the sack of 120 kilogs; a slight rise in the superior sorts on last week's quotations. In as many as 89 provincial markets there has been a rise of from 11c to 1f the hectolitre; and 43 have remained unchanged. In 8 there has been a fall of from 25c to 66c.

Cotton.—The sales at *Havre*, in the week ending Friday, were 12,397 bales, and the importations 23,700 bales. Prices of "low" New Orleans rose 1f—that is to 100f the 50 kilogs; those of all other sorts remained unchanged. The market was animated on Monday, but on Tuesday and yesterday was calm. "Low" New Orleans has been done at 100f 50c, and "good low" at 101f.

Coffee.—At *Marseilles*, last week, 500 sacks Rio went at 73f to 78f in bond; and 9,100 sacks Hayti, for delivery, at 75f to 77f.

Sugar.—At *Havre*, in the week ending Friday, 1,350 hogsheads French West India went at 58f to 58f 75c the 50 kilogs, and a small lot of "usine" ditto 59f; 1,550 sacks Pernambuco at 33f 25c. Some small quantities of damaged Havana and Rio were also sold. This week, business has not been important: French West India has been at 58f 50c to 59f, Reunion 61f 50c.

Naples, Feb. 8.

A treaty of commerce between the Two Sicilies and England is about, it is said, to be signed. This treaty, will make, it is alleged, rather large reductions in the import duties on a great many articles. At present these duties are so high as to be virtually prohibitive, and smuggling on a large scale is the natural consequence.

COMMERCIAL AND MISCELLANEOUS NEWS.

St Petersburg accounts state that the financial position of Russia continues to be a subject of much anxiety, and that the question is whether the means of relief are to be found in a loan or by some other method. The result of the conversion of Bank bills into 5 per cent. stock has been the withdrawal of about 42,000,000*l* of these bills from circulation, and the run for money consequent upon the reduction of interest from 3 per cent. to 2 has obliged the Bank to pay off an additional 22,000,000*l*, making a total of about 64,000,000*l* converted or cancelled out of the 125,000,000*l* originally in the hands of the public. Of the balance now outstanding, it is estimated that a large proportion belongs to the agricultural classes, and others who are not likely to ask for payment; but, looking at the quantity for which provision may still have to be made, and the existing excess of the ordinary note circulation, the fact is admitted that a heavy amount will be required to restore the currency from the serious discount at which it has so long stood. That a loan will be raised if the money markets of London and Paris are found to admit of such an operation is not doubted.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month and of the previous year are added:—

Debtor.	February, 1860.	January, 1860.	February, 1859.
	F c	F c	F c
Capital of the Bank	91,250,000 0	91,250,000 0	91,250,000 0

* Not given.

Advices from Jamaica to the 27th ult. state that a fair business had been done in the markets, considering the season of the year. The arrivals had been very limited, and stocks in consequence having been small, the operations had not been forced. Sales of coffee effected at 38s to 42s per 100 lbs for very good quality. At Demerara the weather had been showery, and more favourable for sugar-making and for the growing crops. The exports during the fortnight included 1,300 hogsheads 44 tierces 891 barrels of sugar, 1,179 puncheons 76 hogsheads 55 barrels of rum, 67 casks of molasses. The decrease in the amount of produce exported in 1859 as compared with 1858 was 3,674 hhds of sugar, 2,123 puncheons of rum, and 1,860 casks of molasses.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 15th day of February, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,864,545	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,389,545
		Silver Bullion	...
	28,864,545		28,864,545

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,171,190
Rest	3,438,504	Other Securities	21,084,139
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	6,830,256	Notes	7,873,400
Other Deposits	14,289,756	Gold and Silver Coin	715,742
Seven Day and other Bills	732,955		
	39,844,471		39,844,471

Dated the 16th February, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,724,100	Securities	31,177,329
Public Deposits	6,830,256	Coin and Bullion	15,105,287
Private Deposits	14,289,756		
	42,844,112		46,282,616

The balance of Assets above Liabilities being 3,438,504*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£380,775
An INCREASE of Public Deposits of	526,039
A DECREASE of Other Deposits of	11,930
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	22,923
An INCREASE of Bullion of	127,970
An INCREASE of Rest of	17,559
An INCREASE of Reserve of	491,525

The satisfactory increase in the reserve is occasioned mainly by the addition to the Treasury balance, the variation in the "other" securities and "other" deposits being unimportant. There is also an increase in the coin, although no imported gold was sent in during the week.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,339,864	£ 19,587,356	£ 20,586,378	£ 21,289,293	£ 21,724,100
Public deposits	7,987,030	7,987,607	4,556,976	7,620,255	6,830,256
Other deposits	9,848,781	9,774,058	15,783,238	14,538,898	14,289,756
Government securities	14,399,368	11,545 009	9,857,999	10,696,147	10,171,190
Other securities	9,657,067	18 247.794	17,634,873	16,442,466	21,084,139

Bank rate of discount	2½ p. c.	6 p. c.	3 p. c.	2½ p. c.	4 p. c.
Price of Consols	95	94	97½	95⅝	95⅛
Average price of wheat	37s 9d	56s 5d	45s 8d	40s 11d	43s 6d
Exchange on Paris (sbrt)	25 45 50	25 25	25 7½ 10	25 7½ 15½	25 10 15
— Amsterdam ditto	12 1	11 15 15⅛	11 14	11 15 16	11 13 14
— Hamburg (3months)	13 13	13 7 7⅛	13 5 5⅛	13 6 6¼	13 5¼ 5⅛

At the corresponding period of the year 1850, trade was stagnant, and money very cheap. The Piræus was blockaded by the English fleet. The Prussian constitution had been completed, and the King and Chambers had solemnly sworn to it. Politics in France were very unsettled.

In 1857, the speech of the Emperor of the French, at the opening of the Legislature, was very pacific, and suggestive of commercial progress. The prospectus of the Grand Russian Railways had been issued, with a proposed "first capital" of 12,000,000*l* sterling.

In 1858, the French Government was still apparently under the influence of the panic with which it was seized upon the occasion of Orsini's attempt upon the Emperor's life. The sternest measures of repression were enforced, except as regards the tone of the French press and army towards England. The position of the Bank of England was becoming stronger daily, and the rate of discount had been reduced to 3 per cent.

In 1859, it had been announced that the requirements of the Indian Government would be satisfied by a loan of seven millions. The rate of discount for the best bills was only 2 to 2¼ per cent. France, Sardinia, and Austria were busily arming.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 191,714*l*; in 1857, a deficiency of 8,473,736*l*; in 1858, a deficiency of 1,851,635*l*; and in 1859, a deficiency of 1,903,568*l*. In 1860, the deficiency is 6,794,383*l*.

The course of the money market has been decidedly more favourable this week. The drain of bullion has been checked, and, although there is no immediate prospect of any supplies of importance, the resumption of small shipments of gold to this country from the United States forms a favourable feature. Now that it is tolerably clear that the value of money has reached its highest point for the present, numerous holders, who hitherto had stood aloof, waiting for a good market, have come forward as lenders. The consequence is a decided decline in the rates in the open market. The best bills, having from two to three months to run, are now discounted at 3¾ to 4 per cent. The terms for long bills have likewise fallen, and the amount of paper of this class offered is limited. As the general market has become cheaper, the business at the Bank of England has fallen off. Yesterday and to-day the demand at that establishment has been slack.

There have been no withdrawals of bar gold from the Bank for exportation since the date of the return given above, with the exception of the small sum of 4,000*l* taken out yesterday.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Silver remains without alteration. We quote prices 62d to 62⅛d per oz standard.

There is not much inquiry for Mexican dollars; sales have this day been effected at 62¾d per oz.

Exchange, on India, for banks' drafts, 60 days sight, continue without change at 2s 0¼d to ⅜d. Madras, nominal, 2s 0⅛d. Documented bills, 1s 11⅞d.

India Government Loan Notes are weaker than on the 9th instant; and we quote 5 per Cents. 97 to 97½; 5½ per Cents. 103¼ to 103½. There has, however, been a better market to-day, more paper having changed hands than for some days past.

The Continental exchanges this week have been generally firm, at the recent improvement.

In the various departments of business, including the wine, sugar, tea, and other trades, a good deal of excitement has prevailed all the week, in consequence of an apprehension that the provisions of the Budget will press with an exceptional degree of hardship upon some interests. This feeling has been partially allayed by the publication of a very moderately-couched letter from the Chancellor of the Exchequer, who recalls attention to the full discussion which the new stamp duties will undergo, and intimates his perfect readiness to entertain all reasonable suggestions.

A rumour that the India Office is about to be transferred to the West-end has excited the attention of the City firms whose business takes them to that establishment, and who apprehend that they may be subjected to great inconvenience.

Messrs Smythe, Searle, and Co., commission agents, have this day stopped payment, with liabilities estimated at 20,000*l* or 30,000*l*.

We regret to hear of the death of Mr T. H. Devitt, of the firm of Devitt and Moore, who has for thirty-five years been engaged as a ship broker in the Australian trade.

The Stock Exchange Committee have delegated to a sub-committee, especially appointed for the purpose, the task of taking steps for remedying the existing anomalous condition of the law with reference to "time bargains." The repeal of of Sir John Barnard's Act is to be agitated for.

The Union Discount Company, Limited, is announced. The capital is fixed at 250,000*l*, and is to be increased to 500,000*l*. The shares are of 5*l* each, of which only 1*l* is to be called up. The Company's operations will consist of discounting bills and making advances upon convertible securities. The shareholders of the Company are to "have a preference as to any approved bills or securities they may send in for discount or to be advanced upon." Agents are to be appointed in Manchester, Liverpool, and other large towns. The names connected with the undertaking are highly respectable.

Another new undertaking is the London and Provincial Marine Insurance Company. Business at the outports is to especially cultivated, and liberal promises of support have already, it is stated, been obtained. London, Liverpool, Hull and Bristol are all represented on the board. A special clause in each policy is to limit the liability of the shareholders. The capital is to be one million, in shares of 20*l* each. The deposit is fixed at 2s per share on application, and 1*l* 18s more on allotment. The shares were quoted this afternoon ¼ to ⅜ prem.

The railway dividends officially announced during the present week are as follows, viz. :—

Caledonian Railway—at the rate of 5 per cent. per annum, against 4 per cent. per annum for the corresponding six months of 1858.

Eastern Counties Railway—at the rate of 6s 9d per 20*l* share, being equal to 3⅜ per cent. per annum, against 3¼ per cent. per annum for the corresponding six months of 1858.

Ambergate, Nottingham, and Boston Railway—at the rate of 3½ per cent. per annum, against 3¼ per cent. per annum for the corresponding period of 1858.

The Caledonian Company's dividend has been considered somewhat of a disappointment in the market. That of the Eastern Counties is as good as was expected.

It is believed that the forthcoming dividend on South-Eastern Railway stock will be at the rate of 6 per cent. per annum, with a surplus of about 10,000*l*, or 6¼ per cent. per annum, with a surplus of about 4,000*l*.

It is officially announced that the Directors of the Ottoman Bank intend, at the ensuing general meeting of shareholders, on the 14th March, to propose that a dividend be declared out of the profits up to the 31st December last of 16s per share, together with a bonus of 12s per share.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 2 3-16 to 2 5-16 prem.; Universal Marine Insurance, ½ to ⅝ prem.; San Paulo (Brazilian) Railway, ¼ to ⅜ dis.; Bank of Turkey, ½ to ¼ dis.; and City of London Brewery preference shares, ¾ to 1¼ prem.

The shares of the Bank of Turkey have given rise to a vast deal of gambling excitement in the Stock Exchange this week. The price has varied from ½ premium to 1 discount. What is termed a "rig" has been attempted by two or three speculators belonging to the Greek community. The Committee of the Stock Exchange have been obliged to interpose, and to place temporarily in abeyance one of the laws of the establishment, which compels the seller of a share to deliver it. An artificial scarcity of shares at the settlement had been ingeniously brought about.

The new Canadian 5 per Cent. loan remains rather dull—the scrip at 1⅞ to 2⅛ prem., and the paid-up bonds at 100⅜ to ⅜.

At Paris, to-day (Friday), the closing quotations of the 3 per Cent. Rentes were as follows, viz., for money, 67.75; ditto, for account, 67.75. These prices are ⅜ per cent. above those of yesterday, yet still a fraction below those of last Friday. The Bourse has shown heaviness almost throughout the week, in consequence of the proposed annexation of Savoy. The rise to-day is attributed to a statement that the policy of the French Government in this matter will not run counter to the views of the great Powers of Europe.

The English funds have been stronger, owing chiefly to the continued absorption of stock for investment. This has caused a large influx of money into the Stock Exchange, and the rate for loans on Consols has fallen to 2 per cent. To-day a stimulus was given by the rise on the Paris Bourse, coupled with a statement that the Savoy question has passed out of its dangerous stage. Consols closed this afternoon at 94¼ to ⅜ for money, and 94¾, "sellers," for the 8th of March. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

The market for British railway stocks has been buoyant. Attention has been chiefly directed to South-Eastern and Midland stocks, the former of which has risen no less than 2½ per cent., and the latter 1½ (after allowing for the deduction of the dividend); but the generally satisfactory character of the dividends lately declared, combined with the continued increase in the traffic, has rendered holders of all kinds of stock unwilling to sell. There has been an improvement of ¼ to ½ per cent. in most of the other principal lines. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422 per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 2-10ths per cent. dearer in London than in Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the importation of gold from the United States.

Imports of the week ..... 54,715 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The few samples of English wheat on offer at Mark lane to-day changed hands, at fully Monday's advance in the quotations. Foreign wheat was in improved request, but not dearer. All spring corn—especially fine barley and oats—commanded full prices. The flour trade was tolerably healthy. The imports from abroad, this week, are small, viz., 1,640 quarters of wheat, 5,310 barley, and 3,770 oats.

There was less activity in the trade generally, at Liverpool, this morning, at about Tuesday's currency.

The sales during the week in the Liverpool cotton market have amounted to 51,000 bales, including 41,500 bales to the trade, 3,500 bales on speculation, and 6,000 bales for export. Quotations are the same as on Friday last. To-day the market closes quietly but steadily: sales 7,000 bales. In the London market 1,400 bales have been sold during the past week, at about previous rates.

Advices from New Orleans to the 8th inst. state that cotton had declined ⅛d per lb. During the previous week, the sales had amounted to 45,000 bales, and the receipts were 49,000.

We have no change to notice in the value of any kind of tea—the supply of which is on the increase—and the demand for all descriptions has continued limited.

The sugar market has ruled healthy, notwithstanding the full average stock on hand, and late quotations have been well supported. In the value of refined goods, scarcely any change has taken place.

Plantation coffee has moved off freely, on rather higher terms, and all other kinds have supported previous quotations.

There has been more doing in the rice market than for some time past, and very full prices have been realised in every instance.

Currants have changed hands at an advance of 4s per cwt, and the value of raisins has shown a tendency to improve. Other fruits have moved off slowly.

At public sale, Spanish indigo has produced 3d to 4d per lb more money for all good and fine qualities.

Owing to the approaching public sales, the wool trade has been in a most inactive state; nevertheless, no quotable change has taken place in value. Hemp has commanded full prices; but flax has sold slowly.

The public sales of silk have been held this week. Messrs Durant and Co. observe:—"The quantity offered was 1,000 bales Bengal, and 8,000 bales China, including about 600 bales Japan. The whole were allowed to pass without biddings as usual. In the present instance, unfortunately, we cannot report 'fair business by private contract.' The market is really quiet, and has been so for some few weeks. The Japan silk has attracted considerable attention, and some 400 to 500 bales of the finest and better classes have been sold at 24s 6d to 26s 6d; some even at 28s per lb."

	Imports Warehoused from 1st to 16th Feb., 1860.	Deliveries from 1st to 16th Feb., 1860.	Stock, sold and unsold on 16th Feb., 1860.
	bales	bales	bales
Bengal	209	545	5264

Japan	1145	145	1070

"The great event of the day, in fact of our days, the treaty of commerce between France and England," observe Messrs Dufour and Co., of Lyons, writing on the 8th inst., "has surprised the political as well as the commercial world. Everybody feels instinctively that this great fact, which is the best guarantee, perhaps the only possible guarantee for a lasting peace, must have an immense influence on the commerce and the prosperity of the two countries. Notwithstanding the excitement in the public mind, and the usual flatness of this season of the year, prices of silk are rather firm."

DELIVERIES of SILK through the LYONS CONDITION HOUSE.

	bales.	kilogs.
From December 1 to 31, 1858.....	4,200	342,000
From December 1 to 31, 1859.....	3,000	216,000
From January 1 to 31, 1859	2,640	220,000
From January 1 to 31, 1860	2,600	186,000

Rum has moved off slowly; but a considerable advance has taken place in the value of brandy. Grain spirits have maintained previous rates.

Scotch pig iron has changed hands steadily at 60s to 60s 6d cash, mixed numbers. Spelter, on the spot, has been quoted at 20*l* 15s per ton. Other metals have ruled about stationary.

The oil market has been tolerably healthy at, mostly, very full prices. Tallow, although higher rates have come to hand from St Petersburg, has continued quiet, at 60s to 60s 6d per cwt on the spot.

"The prevailing irregularity and consequent dissatisfaction among the trade," observes the New York *Shipping List* of the 1st instant, "are the most striking features of the dry goods market, which continues without change, and the sales are not up to general expectation, though the past week has been more prosperous than during any week in the month of January, while the indications are decidedly more favourable for a good spring business. Stocks are ample, and purchasers have every opportunity to procure a good supply of every desirable fabric. Woollen goods are in moderate inquiry, and without noticeable change in price. Prices are nominally unchanged. The demand for cotton goods for exports is good, and the shipments continue heavy."

Galveston 31	4	2	1
Total	159	65	151

The market is without essential change, the demand having been moderate at prices not varying materially from our previous quotations, though slightly favouring the buyer. The sales for the three days are 5,000 bales, about half of which were in transit, at previous rates. The market closed quietly at our revised quotations. We quote:—

NEW YORK CLASSIFICATION.

	Upland.	Florida.	Mobile.	New Orleans and Texas.
	c	c	c	c
Ordinary	9	9	8	9¼
Good ordinary...	9⅞	10	10¼	10⅜
Middling	11¼	11⅜	11¼	11⅜
Good middling...	11⅞	12	12¼	12⅜
Middling fair.....	11⅞	12⅜	12⅜	13⅜

The arrivals have been from Nassau, N.P., 55 bales; Texas, 2,105; New Orleans, 314; Florida, 2,094; Georgia, 2,070: South Caroline, 2,672; North Carolina, 1,477; Virginia, 758; total, 11,545. Total import from 1st to 31st January, 48,207 bales. Export from 1st to 31st January, 18,267 bales, against 8,919 in 1859.

NEW YORK, Feb. 9.—Cotton is steady. Sales in four days amount to 6,000 bales. Middling uplands, 11¼c; middling Orleans, 11⅜c.

MARKETS IN THE MANUFACTURING DISTRICTS.

In most of the leading markets there has been rather more doing in goods for shipment, both to the Continent and India; whilst, for home use, the demand has continued in a healthy state. Stocks continue unusually low for the time of year, and manufacturers, generally, are fully employed. In the coal districts, business is somewhat active, and there is a good demand for iron, both on English and foreign account.

MANCHESTER, Feb. 16.—This week has been rather more inactive than last, but no impression has been produced on the tone of steadiness generally observable throughout the market. A few sales of 40's mule were made on Tuesday for India, 32's twist and a few other counts for the home trade have still been wanted at full rates, and fine spinnings for the Yorkshire district have been taken very freely. In cloths, the absence of hourly expected accounts from the East, the existing engagements of producers, and the high range of prices now attained, have caused a lull. The chief sales reported, and they have not been much, have been in the better class of shirtings and printers.

HUDDERSFIELD.—The country trade continues quiet. The local wool market has been somewhat less brisk during the week, manufacturers buying more sparingly.——LEEDS.—Rates may be said to be without change. The warehouses are not so busy as they were last week, but the orders of the buyers, if not large, may be considered to indicate a satisfactory position of trade.——BRADFORD.—The piece market is in no way improved. The American houses are doing nothing. There is no change to report in the wool market. Sales are limited chiefly to the immediate requirements of buyers. The yarn market is very quiet: the export houses have ceased to operate, and the demand for home consumption is very slack.——HALIFAX.—The carpet and woollen trades in this district continue brisk, but there is a little slackness in the worsted trade, rather, however, as to purchasers than as to the condition of the spinners and manufacturers, most of whom are well employed.——ROCHDALE.—Wool—The operations in most of our warehouses have been very quiet, and manufacturers, considering the present prices far too high, show a disposition to keep out of the market. Prices are much the same as they were on Monday last. Flannel—We have not had so many merchants in town as last week, and transactions have not been active.——LEICESTER.—There is a fair business doing in most descriptions of hosiery. In the country districts, trade remains in a satisfactory state. Yarns are unaltered in price, spinners being well employed. The wool market is firm, and high prices continue to be given for superior sorts.——NOTTINGHAM.—There is very little alteration to report in the state of the lace trade. Some of the German buyers have left tolerable orders. The home trade, however, still remains quiet. In hosiery there continues to be a good amount of business transacting. Yarns firm, with no appareot indication of giving way.——DUNDEE.—The market, generally, is firm, but no change has taken place in prices.——BELFAST.—Yarns have been less active. In linens, however, more business is doing, at extreme rates. Stocks are very low.——BIRMINGHAM.—Less of briskness prevails in the trade. The iron trade of South Staffordshire is not quite so brisk; such slackness as may exist applies chiefly to inferior makes of finished iron, for which there is only a moderate demand. The coal trade is remarkably active.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Feb. 1.—FLOUR AND MEAL.—The market for State and Western flour continues much depressed, and the inquiry has been confined almost exclusively to the requirements of the local and Eastern trade. Prices have not varied materially, but the tendency has been to lower rates. The sales for the three days comprise 14,700 bbls. Southern flour is also dull, and 20 to 35 cents per bbl. lower. The receipts continue heavy, and the stock is accumulating; transactions comprise 2,300 bbls. Export from 1st to 31st January: wheat flour, 49,303 bbls, against 31,322 bbls in 1859.

GRAIN.—Inactivity continues to be the principal characteristic of the market for wheat, and the trade appear to be settling down under the conviction that there can be no important or prominent improvement for some considerable time to come, or until the receipt of more favourable European advices. The market for corn has also been very dull, and holders have granted a further concession, amounting to 2 cents per bushel. Export from 1st to 31st January: wheat, 50,196 bushels, against 10,759 in 1859: corn, 4,149 bushels, against 5,972 in 1859.

NEW YORK, Feb. 9.—The demand for wheat and flour is steady, at extreme rates.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Owing, in some measure, to the improved condition of the supplies on offer, there has been an improved demand for all kinds of English wheat this week, at an advance in the quotations of fully 1s per quarter. The business done, however, has been only moderate. Foreign wheat, both red and white, has commanded more attention, but no actual advance has taken place in prices. Most descriptions of barley—the receipts of which have not increased—have moved off freely, at fully the late improvement in value. The malt trade has been in a sluggish state, on former terms. Oats, however, have commanded rather more money, with a fair inquiry. Both beans and peas have tended upwards in price, and the value of flour has been well supported.

In the leading agricultural districts, rather large quantities of wheat have been thrashed out this week; hence we may look forward to increased arrivals, coastwise and by land carriage. Throughout the Continent, wheat for spring shipment has commanded rather more attention. In prices, however, very little change has taken place. There has been an improved inquiry for most kinds of spring corn, at extreme rates. The latest advices from New York state that both wheat and flour were selling slowly, at about previous rates. Shipments were progressing slowly.

In Scotland, wheat, fine barley, and oats have commanded rather more attention, at slightly enhanced rates. The value of other produce has been well supported.

The Irish markets have shown more firmness. In the general quotations, however, very little change has taken place.

Only a limited supply of English wheat was on offer here today, and all kinds moved off freely, at fully Monday's advance in the quotations. Barley was firm, at extreme rates, but malt commanded very little attention. Oats were the turn dearer, and all other articles ruled steady.

Mr Ed. Rainford reports that only two vessels laden with grain have arrived at ports of call since the 7th inst., and that a fair business has been passing in floating cargoes, at full quotations.

The London averages announced this day were:—

	qrs	s	d

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There have been increased supplies brought forward by the importers this week, which met with a steady demand from the trade and refiners, but the market is now quiet, general quotations showing little variation on those current last Friday. Arrivals keep light, in consequence of the contrary winds, and the stock was further diminished according to the latest returns made up. Only 2,030 casks West India had changed hands to yesterday (Thursday), including 378 casks Barbadoes, by auction, at 37s to 44s 6d, and several lots of grainy Berbice, at 37s 6d to 41s for brown, and 41s 6d to 48s for low to fine grey. The Netherland Trading Company's sale on the 13th proximo will comprise 53,600 baskets, or 4,000 less than the previous season's. The deliveries in London last week were 3,650 tons, and the landings 2,500 tons, consequently the stock has fallen to 53,500 tons, against 51,200 in 1859, and 51,000 tons in 1858. The present stocks of Mauritius and colonial East India are still relatively light.

Mauritius.—On Tuesday, 8,058 bags of the new crop principally found buyers at about the former value: low to good middling grey, 39s to 42s; low to good brown, 30s to 38s 6d; grainy and crystalised sorts, 41s to 46s 6d; crystalised white, 49s to 50s per cwt.

Bengal.—The public sales, mostly comprising grainy kinds, went off flatly, and 2,634 bags about half found buyers: fine grocery, 47s; syrupe, 41s 6d to 46s; Cossipore withdrawn at 45s 6d to 47s 6d; low soft Gurpatta date, at 38s 6d per cwt.

Madras.—3,200 bags principally met with buyers: native brown and yellow, 32s to 35s. Business has also been done by private treaty in Jaggery at 30s per cwt.

Penang.—524 bags soft brown and yellow sold from 36s 6d to 41s 6d per cwt

Port Natal.—211 bags went at 40s to 45s per cwt.

Foreign.—6,400 bags clayed Manilla, offered by auction, were taken in at 39s 6d to 40s. Of 6,563 bags Siam, three-fourths sold at 43s 6d to 46s 6d for middling to fine strong grey; white, 47s to 47s 6d per cwt. 627 boxes Havana brought 40s 6d to 43s 6d for washed grey and yellow. Privately, 8,000 bags unclayed Manilla have sold at 32s to 33s. A cargo of 1,900 baskets Java is reported at 45s 6d per cwt, equal to No. 13.

Refined.—There has not been any change in general quotations this week, but the market is rather quiet. Low to middling goods quoted 51s to 52s per cwt, upwards.

Molasses.—The sales are unimportant.

Rum.—There has been only a limited business done this week. The stock of rum at this port is 26,620 puns, against 25,000 puns last year. Deliveries keep very steady.

Coffee.—The imposition of a duty on chicory has not influenced the market very materially, and the moderate quantity of plantation Ceylon submitted went a little dearer for middling qualities. 568 casks 640 barrels and bags nearly all sold at 61s 6d to 70s for ordinary pale rather broken to low middling; and 71s to 79s for middling to good. A few parcels have changed hands by private treaty. Of 1,508 bags 89 barrels and bags native, a considerable portion sold at 58s to 61s for ordinary to good. 245 bags Wynaad plantation, 65s to 73s per cwt.

Cocoa.—60 bags Trinidad sold at high prices, ranging from 73s to 85s 6d for low mixed greyish to good red. This description is still scarce. 400 bags Bahia realised 47s per cwt. No sales of importance have occurred by private contract.

Tea.—There has been less business done in this market, and prices generally remain unchanged. Good to fine congous still attract partial attention. Common is quoted nominally 1s 5½d per lb. No public sales have taken place.

Rice.—The sales have been moderate this week, but holders do not seem anxious to sell, and the previous value is maintained. Good middling white Bengal realised 12s 1½d; pinky Madras, 9s 9d; and low Ballam, 9s per cwt cash. By private contract, 10,000 bags common old soft grain descriptions are reported at 7s 9d to 8s per cwt.

Imports and Deliveries of Rice to February 11, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	500	3950	15240	16100

Exported	2350	2250	1660	4500
Stock	67550	84700	73000	56730

Spices.—The chief feature to notice has been the rise of 2d to 6d per lb paid for nutmegs, the greatest rise being upon consuming sorts. 70 cases brown sold from 1s 7d to 2s 10d for low small to fair mixed; one lot bold, 3s 8d. 9 cases mace sold at 3d to 6d advance: fine, 3s 4d; low and worm-eaten to fair reddish, 1s 4d to 2s 2d. Black pepper has been quiet. 771 bags fair Singapore part sold at 4¼d to 4⅜d. 101 bags good Penang realised 4⅜d. 210 bags pimento were bought in at 4d to 4⅛d; a portion since sold at 4d. Common sorts of ginger are firmer. African last sold at 32s 6d. 35 cases Bombay were withdrawn, holders requiring very high rates. There is no improvement to notice in cassia lignea: 80 cases were bought in at 100s to 107s per cwt.

Saltpetre is rather lower this week, and few parcels have changed hands by private contract. Some Bengal, refraction 6 per cent., realised 40s 6d; 3¼, 41s 6d per cwt cash. At auction, 1,834 bags Bombay, refraction 41⅜ to 29¾, sold from 29s 6d to 32s 6d per cwt.

Imports and Deliveries of Saltpetre to February 11, with Stocks on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	2350	2140	1060	1560
Delivered	1370	2100	1800	1350
Stock	5000	2980	5660	2270

Delivered last week 266 tons.

Cochineal.—This article remains steady, and 205 bags were about two-thirds disposed of: silvers, low pasty to good, 2s 11d to 3s 10d; blacks, 3s 9d to 4s 8d; Mexican silvers, 3s 4d to 3s 5½; blacks, 3s 5d to 3s 8d per lb.

Shellac still shows a tendency to advance. Some button kinds submitted this week went rather above the valuations: common to good, 7*l* 7s 6d to 8*l* 12s 6d per cwt.

Dyestuffs.—Cutch is quiet at 28s to 28s 6d. Gambier fully supports the late advance. 700 bales were withdrawn at 17s 6d, and 17s per cwt was refused. Safflower remains without any improvement to notice.

Lac Dye is not at all active at the late advance. Of 212 chest 70 bags in public sale, a few lots found buyers at 2d to 7d per lb. Few transactions have occurred by private contract.

Drugs.—The public sales yesterday went off steadily at full prices Castor oil sold at extreme rates. Yellow bark was rather dearer.

Rubber.—East India is scarce at 2s 2d per lb.

Metals.—No change of importance has been perceptible in this market, which remains rather dull. Scotch pig iron, after some fluctuations, closes at 59s 9d to 60s, the lowest price reached being 59s 3d per ton. The sales of tin have been limited: Banca, 135s to 136s; Straits, 130s, nominal. No further change can be noticed in British. Several contracts have been made in spelter: on the spot at 20*l* 17s 6d to 21*l*; small plates, 21*l* 10s to 21*l* 15s; for spring shipment, at 20*l* 17s 6d to 21*l* per ton. Copper and lead are without change since last Friday.

Hemp.—There is not much business passing in any kind. Holders of Manilla seem less desirous to realise at the present low value. Russian continues quiet. The inquiry for jute has been rather of an active character, and several parcels have been sold afloat. At the public sales on Wednesday, comprising 2,174 bales, there was a good demand at full and occasionally slightly higher prices. Low to good qualities ranged from 12*l* 15s to 19*l* 7s 6d per ton.

Oils.—Olive remains exceedingly firm: Gallipoli, on the spot, 59*l* 10s. Sperm has advanced, 97*l* to 98*l* per tun being the present value.

Turpentine.—Large sales have been made in American spirits at 37s.

Tallow.—Notwithstanding the proposed abolition of the duty (1s 6d per cwt) the price of last Friday has been maintained for foreign on the spot, while for later deliveries some reduction is apparent. Consumers appear to have bought rather sparing throughout the week, while the advices from St. Petersburg show unabated firmness on the part of holders. This morning first sort Y.C. is quoted 60s; for the last three months, 53s per cwt, including the duty.

Particulars of Tallow.—Monday, February 13.

POSTSCRIPT.

Friday Evening.

Sugar.—The market was steady to-day. 5,200 bags Mauritius, 3,753 bags native Madras, and 581 bags Penang, at the public sale, found buyers at previous rates. 411 bags middling white Benares realised 47s 6d to 48s per cwt, being 1s 6d to 2s dearer. Privately, 1,500 boxes Havana sold at 42s 6d. The week's business in West India amounts to 2,960 casks. By auction, to-day, grainy Demerara went at 40s to 46s 6d per cwt.

Coffee.—35 casks 913 bags native partly sold at 62s 6d to 63s per cwt.

Tallow.—Y. C., 59s 9d to 60s; and 53s for the last three months. Town unaltered.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very steady during the week for most descriptions of goods except treacle, which has been in good demand at rather higher prices. The Dutch and Belgian markets are quieter.

Dry Fruit.—Purchases to a large extent have been made this week in new currants, of which none now remain for sale below 40s per cwt, present duty to be allowed, and latterly in fine sorts, both descriptions at an advance of 3s to 4s upon previous rates. Not any inquiry for raisins, nor do figs attract any attention at present.

Colonial and Foreign Wool.—The market remains quiet, but quite firm.

Flax.—Market steady.

Hemp.—Market very quiet and little business doing.

Cotton.—Sales of cotton wool from Friday, 10th Feb., to Thursday 16th inclusive:—200 bales Surat at 4½d to 5d for very middling to fair; 1,200 bales Madras at 5 9-16d to 5⅝d for fully fair to fully good fair. The market continues steady, and a fair amount of business has been transacted in Tinnivelly at full prices. Although little has been done in Surat, prices remain firm.

Tobacco.—The trade have purchased to a moderate extent, of useful home descriptions common and ordinary sorts remain neglected. Prices unchanged. For exportation, demand continues dull. About 80 hhds have been taken for the navy.

LEATHER AND HIDES.—Since last week there is no change to report in the leather market. The demand has not been particularly active, although a fair amount of business has been done at former prices. At Leadenhall, on Tuesday, the fresh supplies were not large. The articles most scarce and in greatest request were best English butts of light and middle weights, good dressing and shaved hides, and calf-skins 40 lbs and under.

METALS.—There has again been rather a scarcity of business, with but few changes in prices. Copper is firm in all respects, the stocks of foreign being gradually diminishing without any fresh supplies of consequence, and the manufacturers are well off for orders. Iron shows a quiet market for all descriptions. Tin is flat, and tends again downward in prices. Spelter has been done in to some extent. Lead is without change. Tin-plates are in better demand, but prices still rule exceedingly low.

TALLOW.—Official market letter issued this evening :—

	s	d
Town tallow	61	9
Fat by ditto	3	3
Yellow Russian	61	6
Melted stuff	42	6
Rough ditto	25	0

METROPOLITAN CATTLE MARKET.

MONDAY, Feb. 13.—The total imports of foreign stock into London last week amounted to 1,207 head. In the corresponding week in 1859 we received 2,479; in 1858, 358; in 1857, 1,016; in 1856, 621; in 1855, 379; and in 1854, 3,824 head.

Notwithstanding that only moderate supplies of beasts came fresh to hand from our own grazing districts, and that the weather was favourable for slaughtering, the beef trade was in a sluggish state, and, in some instances, prices ruled the turn in favour of buyers. The extreme value of the best Scots was 4s 10d per 8 lbs. The show of sheep was again moderate, and the general quality of each breed was by no means prime. The mutton trade ruled somewhat active, and the quotations had an upward tendency—several pens of prime Downs having realised quite 5s 8d per 8 lbs. Calves were brisk, and 4d per 8 lbs dearer than on Monday last. The best veal was worth 6s per 8 lbs.

SUPPLIES.

	Feb. 15, 1858.	Feb. 14, 1859.	Feb. 13, 1860.
Beasts	3880	3343	3870
Sheep	16155	15070	18320
Calves	55	101	137
Pigs	135	420	390

THURSDAY, Feb. 16.—A fair average supply of beasts, both as to number and quality, was on offer in to-day's market. All breeds met a slow inquiry; nevertheless, compared with Monday, no change took place in the quotations. The show of sheep was moderate, and the mutton trade ruled inactive, at the late advance in prices. Prime small calves sold readily—other descriptions of veal slowly, on former terms.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8
Second quality ditto	3	8	4	2	Large coarse calves	5	2	5	6
Prime large oxen	4	4	4	8	Prime small ditto	5	8	6	0
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto	4	4	4	8	Suckling calves...each	18	0	22	0
Prime coarse-woolled do.	5	0	5	4	Quarter old store pigs	23	0	29	0

Total supply—Beasts, 1,120; sheep, 3,150; calves, 170; pigs, 320.
Foreign supply—Beasts, 130; sheep, 400; calves, 95.

NEWGATE AND LEADENHALL.

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	6	2	10	Mutton, inferior	3	4	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	6	5	4	Small pork	4	4	5	0

HOP MARKET.

MONDAY, Feb. 13.—Our market during the past week has continued steady, with a moderate demand; but since the announcement of the proposed change in the hop duties, the trade has completely stopped. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Feb. 17.—The market has assumed a somewhat healthier tone.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Feb. 13.—During the past week the arrivals coastwise have not been so heavy, but still greater than the demand; the trade has been heavy and prices lower; a great many have been stored to clear vessels. The following are this day's quotations :—York Regents, 90s to 130s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 90s to 120s; ditto reds, 85s to 95s; Perth, Forfar, and Fifeshire Regents, 75s to 90s; ditto Rocks and reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, Feb. 16.—The arrivals of home produce continue limited at this market, coastwise and by rail, and owing to the supplies on hand being short, a fair trade is doing at fully previous rates. York Regents, from 140s to 150s; ditto Flukes, 130s to 140s; Kents and Essex ditto, 80s to 120s; Scotch ditto, 90s to 120s; ditto Cups, 80s to 95s; Dunbars, 120s to 140s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 15s to 4*l* 6s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. Trade steady.

CUMBERLAND.—Meadow hay, 2*l* 17s to 4*l* 8s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 2*l* 15s to 4*l* 6s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 5s to 1*l* 10s per load. Trade firm.
